## AUDIT CERTIFICATION

**Gradient**  
SYSTEMS

Bruce McNutt  
IBM Corporation  
650 Harry Road  
San Jose, CA 95120

October 19, 2011

The SPC Benchmark 2/Energy™ Reported Data listed below for the IBM XIV® Storage System Gen3 were produced in compliance with the SPC Benchmark 2/Energy™ V1.4 Onsite Audit requirements.

SPC Benchmark 2/Energy™ V1.4 Reported Data	
<b>Tested Storage Product (TSP) Name:</b> IBM XIV® Storage System Gen3	
<b>Metric</b>	<b>Reported Result</b>
SPC-2 MBPS™	7,467.99
ASU Capacity	154,618.823 GB
SPC-2 Price-Performance™	\$152.34
Data Protection Level	Protected ( <i>Mirroring</i> )
Total Price	\$1,137,641.30

Power Environment			Nominal			
Average RMS Voltage:			Average Power Factor:	0.978		
Usage Profile			Power	Traffic	Ratio	Heat
			watts	MBPS	MBPS/w	BTU/hr
Low Daily Usage:	Heavy	8	6049.33	2185.53	0.36	20,640.91
Medium Daily Usage:	4	14	6134.88	5129.80	0.84	20,932.84
High Daily Usage:	18	6	6209.13	7512.21	1.21	21,186.16
Composite Metrics:			6,131.11	4,942.51	0.81	
Annual Energy Use, kWh:	53,708.55					
Energy Cost, \$/kWh:	\$ 0.12		Annual Energy Cost, \$: \$ 6,445.03			

Storage Performance Council

## AUDIT CERTIFICATION (CONT.)

IBM XIV® Storage System Gen3  
SPC-1 Audit Certification

Page 2

The following SPC Benchmark 2/Energy™ Onsite Audit requirements were reviewed and found compliant with V1.4 of the SPC Benchmark 2/Energy™ Specification:

- A Letter of Good Faith, signed by a senior executive.
- The following Data Repository storage items were verified by physical inspection and documentation supplied by IBM Corporation:
  - ✓ Physical Storage Capacity and requirements.
  - ✓ Configured Storage Capacity and requirements.
  - ✓ Addressable Storage Capacity and requirements.
  - ✓ Capacity of each Logical Volume and requirements.
  - ✓ Capacity of the Application Storage Unit (ASU) and requirements.
- The Application Storage Unit (ASU) Capacity was filled with random data using Vdbench 5.03 Beta prior to the execution of the SPC-2/E™ Tests.
- An appropriate diagram of the Benchmark Configuration/Tested Storage Configuration.
- Physical verification of the components to match the above diagram
- Listings and commands to configure the Benchmark Configuration/Tested Storage Configuration, including customer tunable parameters that were changed from default values.
- The following Host System items were verified by physical inspection and documentation supplied by IBM Corporation:
  - ✓ Required Host System configuration information.
  - ✓ The TSC boundary within the Host System.
- The following SPC-2 Workload Generator information was verified by physical inspection and documentation supplied by IBM Corporation:
  - ✓ The presence and version number of the Workload Generator on each Host System.
  - ✓ Commands and parameters used to configure the SPC-2 Workload Generator.
- The execution of each Test, Test Phase, and Test Run was observed and found compliant with all of the requirements and constraints of Clauses 6, 7 and 12 of the SPC-2 Benchmark Specification.
- The Test Results Files and resultant Summary Results Files received from IBM Corporation for each of the following were authentic, accurate, and compliant with all of the requirements and constraints of Clauses 6, 7 and 12 of the SPC Benchmark 2/Energy™ Specification:
  - ✓ Idle Test
    - Pre-Idle Phase
    - Idle Phase
    - Post-Idle Phase
  - ✓ Data Persistence Test
  - ✓ Large File Processing Test
  - ✓ Large Database Query Test
  - ✓ Video on Demand Delivery Test
- The Yokogawa WT230 Digital Power Meter, used to record power consumption, was verified as an SPC approved “Power Extension apparatus” with a current calibration certificate.

Storage Performance Council  
643 Bair Island Road, Suite 103  
Redwood City, CA 94062  
[AuditService@storageperformance.org](mailto:AuditService@storageperformance.org)  
650.556.9384

## AUDIT CERTIFICATION (CONT.)

IBM XIV® Storage System Gen3  
SPC-1 Audit Certification

Page 3

- All power supplies present in the Tested Storage Configuration were verified as active.
- IBM Corporation provided documentation of the following:
  - ✓ Voltage (220), amperage (30), and phase characteristics (*single*) of the AC inputs used for powering the Tested Storage Configuration.
  - ✓ The configured power supplies were configured for mutual failover.
- Concurrent power measurements were taken at each active AC input so that the total power requirement of the Tested Storage Configuration was recorded.
- The ambient temperature was recorded at the following times in near proximity to the Tested Storage configuration with a precision of at least  $\pm 0.1^{\circ}\text{C}$ :
  - ✓ During the first one minute of the Idle Test (*Initial Energy Extension temperature*).
  - ✓ During the last one minute of the Video on Demand Delivery Test (*Final Energy Extension temperature*).
- The Benchmark Configuration/Tested Storage Configuration diagram included the electrical metering, which illustrates the measurement apparatus used and the relationship between the active AC inputs and the associated measurement apparatus inputs.
- There were no differences between the Tested Storage Configuration and Priced Storage Configuration.
- The submitted pricing information met all of the requirements and constraints of Clause 9 of the SPC Benchmark 2/Energy™ Specification.
- The Full Disclosure Report (*FDR*) met all of the requirements in Clauses 10, 11 and 12 of the SPC Benchmark 2/Energy™ Specification.
- This successfully audited SPC measurement is not subject to an SPC Confidential Review.

### **Audit Notes:**

The number of Stream specified for SPC-2 Persistence Test Run1 was less than the required value. After review of the measurement data generated by the test and review of various pre-audit measurements, it is my opinion that the pre-audit measurements combined with the audit measurement provided sufficient evidence to meet the requirement of the Persistence Test.

Respectfully,

Walter E. Baker  
SPC Auditor

Storage Performance Council  
643 Bair Island Road, Suite 103  
Redwood City, CA 94062

## **LETTER OF GOOD FAITH**

Vice President and Disk Storage Business Line Executive

IBM Technology & Systems Group  
3039 Cornwallis Road,  
Research Triangle Park, NC 27709

Phone: 1-919-543-5345  
Fax: 1-919-543-2856

September 30, 2011

Mr. Walter E. Baker, SPC Auditor  
Gradient Systems, Inc  
643 Bair Island Road, Suite 103  
Redwood City, CA 94063

Subject: SPC-2/E Letter of Good Faith for the IBM XIV Storage System.

IBM Corporation is the SPC-2/E Test Sponsor for the above listed product. To the best of our knowledge and belief, the required SPC-2 benchmark results and materials we have submitted for that product are complete, accurate, and in full compliance with Version 1.4 of the SPC-2/E benchmark specification.

Our disclosure of the Benchmark configuration and execution of the benchmark includes all items that, to the best of our knowledge and belief, materially affect the reported results, regardless of whether such items are explicitly required to be disclosed by the SPC-2 benchmark specification.

Sincerely,

Doug Balog

### Tested Storage Product (TSP) Description

The IBM XIV® Storage System Gen3 is a versatile, high-end disk storage solution with an innovative grid architecture that can provide clients excellent performance and scalability while significantly reducing costs and complexity. XIV includes automated data placement that needs no tuning as application workloads change.

## SPC-2 Reported Data

SPC-2 Reported Data consists of three groups of information:

- The following SPC-2 Primary Metrics, which characterize the overall benchmark result:
  - SPC-2 MBPS™
  - SPC-2 Price Performance
  - Application Storage Unit (ASU) Capacity
- Supplemental data to the SPC-2 Primary Metrics.
  - Total Price
  - Data Protection Level
- Reported Data for each SPC Test: Large File Processing (LFP), Large Database Query (LDQ), and Video on Demand Delivery (VOD) Test.

SPC-2 Reported Data				
IBM XIV® Storage System				
SPC-2 MBPS™	SPC-2 Price-Performance	ASU Capacity (GB)	Total Price	Data Protection Level
7,467.99	\$152.34	154,618.823	\$1,137,641.30	Protected (Mirroring)
<i>The above SPC-2 MBPS™ value represents the aggregate data rate of all three SPC-2 workloads: Large File Processing (LFP), Large Database Query (LDQ), and Video On Demand (VOD)</i>				
SPC-2 Large File Processing (LFP) Reported Data				
	Data Rate (MB/second)	Number of Streams	Data Rate per Stream	Price-Performance
LFP Composite	8,259.94			\$137.73
Write Only:				
1024 KiB Transfer	6,724.35	576	11.67	
256 KiB Transfer	6,766.87	576	11.75	
Read-Write:				
1024 KiB Transfer	8,246.33	576	14.32	
256 KiB Transfer	8,197.50	576	14.23	
Read Only:				
1024 KiB Transfer	9,416.48	576	16.35	
256 KiB Transfer	10,208.08	576	17.72	
<i>The above SPC-2 Data Rate value for LFP Composite represents the aggregate performance of all three LFP Test Phases: (Write Only, Read-Write, and Read Only).</i>				
SPC-2 Large Database Query (LDQ) Reported Data				
	Data Rate (MB/second)	Number of Streams	Data Rate per Stream	Price-Performance
LDQ Composite	9,740.03			\$116.80
1024 KiB Transfer Size				
4 I/Os Outstanding	9,496.90	576	16.49	
1 I/O Outstanding	9,422.03	576	16.36	
64 KiB Transfer Size				
4 I/Os Outstanding	10,069.26	576	17.48	
1 I/O Outstanding	9,971.93	576	17.31	
<i>The above SPC-2 Data Rate value for LDQ Composite represents the aggregate performance of the two LDQ Test Phases: (1024 KiB and 64 KiB Transfer Sizes).</i>				
SPC-2 Video On Demand (VOD) Reported Data				
	Data Rate (MB/second)	Number of Streams	Data Rate per Stream	Price-Performance
	4,404.00	5,600	0.79	\$258.32

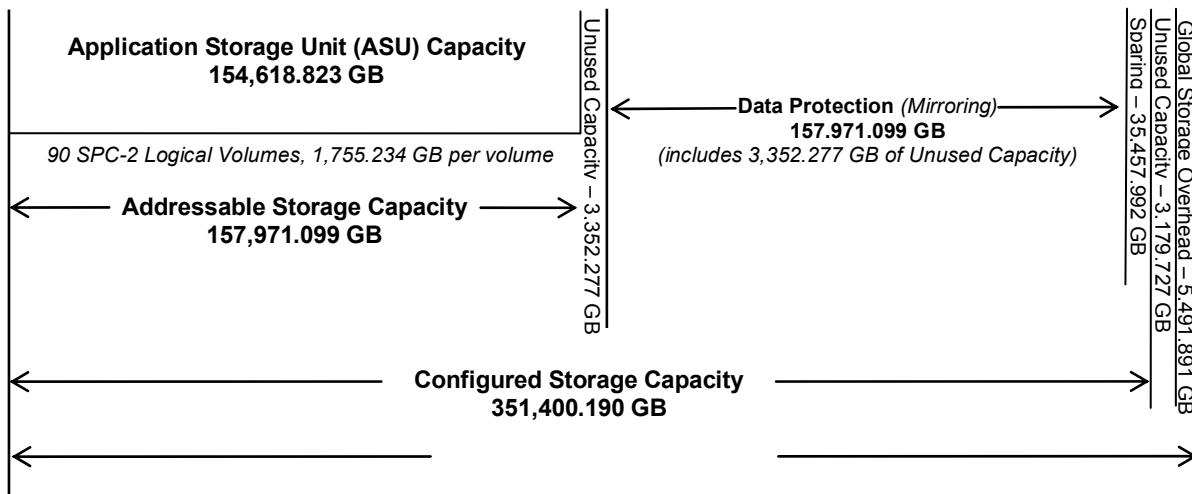

**SPC-2 MBPS™** represents the aggregate data rate, in megabytes per second, of all three SPC-2 workloads: Large File Processing (LFP), Large Database Query (LDQ), and Video on Demand (VOD).

**ASU** (Application Storage Unit) **Capacity** represents the total storage capacity read and written in the course of executing the SPC-2 benchmark.

A **Data Protection Level of Protected** using **Mirroring** configures two or more identical copies of user data.

## Storage Capacities and Relationships

The following diagram (*not to scale*) and table document the various storage capacities, used in this benchmark, and their relationships, as well as the storage utilization values required to be reported.

SPC-1 Storage Capacity Utilization	
Application Utilization	42.94%
Protected Application Utilization	85.55%
Unused Storage Ratio	2.75%

**Application Utilization:** Total ASU Capacity (*154,618.823 GB*) divided by Physical Storage Capacity (*360,071.808 GB*)

**Protected Application Utilization:** (Total ASU Capacity (*154,618.823 GB*) plus total Data Protection Capacity (*157,971.099 GB*) minus unused Data Protection Capacity (*3,352.277 GB*) divided by Physical Storage Capacity (*360,071.808 GB*).

**Unused Storage Ratio:** Total Unused Capacity (*9,884.280 GB*) divided by Physical Storage Capacity (*360,071.808 GB*) and may not exceed 45%.

Detailed information for the various storage capacities and utilizations is available on pages 24-25 of this document.

### **Differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration**

There were no differences between the TSC and Priced Storage Configuration.

## SPC-2/E Reported Data

The initial temperature, recorded during the first one minute of the SPC-2/E Idle Test was 72F. The final temperature, recorded during the last one minute of the SPC-2/E Large Database Query (LDQ) Test was 67F.

### Power Environment

Average RMS Voltage: 209.83 Average Power Factor: 0.978

	Usage Profile			Nominal		
	Hours of Use per Day			Power watts	Traffic MBPS	Ratio MBPS/w
Low Daily Usage:	Heavy	Moderate	Idle	<b>6049.33</b>	<b>2185.53</b>	<b>0.36</b>
Medium Daily Usage:	0	8	16			<b>20,640.91</b>

Composite Metrics:			<b>6,131.11</b>	<b>4,942.51</b>	<b>0.81</b>	
Annual Energy Use, kWh:	<b>53,708.55</b>					
Energy Cost, \$/kWh:	\$	0.12		<b>Annual Energy Cost, \$: \$ 6,445.03</b>		

**HEAVY** SPC-2 Workload: 6,220.98W at a data rate of 7,830.75 MB/s.

**MODERATE** SPC-2 Workload: 6,556.58W at a data rate of 6,556.58 MB/s

**IDLE** SPC-2 Workload: 5,987.20W at data rate of zero (0).

The above usage profile describes conditions in environments that respectively impose light (**Low Daily Usage**), moderate (**Medium Daily Usage**), and extensive (**High Daily Usage**) demands on the Tested Storage Configuration (TSC). The data in this profile represents the combined results of all three SPC-2 workloads: Large File Processing (LFP), Large Database Query (LDQ) and Video on Demand Delivery (VOD).

The detailed SPC-2/E Reported Data and associated charts for each workload, including the Idle Test, are available in this document, via the hyperlinks listed below:

- [The SPC-2/E Idle Test chart](#)
- [SPC-2/E Large File Processing \(LFP\) Reported Data table and associated charts](#)
- [SPC-2/E Large Database Query \(LDQ\) Reported Data table and associated charts](#)
- [SPC-2/E Video on Demand Delivery \(VOD\) Reported Data table and associated charts](#)

The definitions, listed below, for the remaining items in the above SPC-2/E Reported Data table, are identical for the SPC-2/E Reported Data tables for each of the three individual SPC-2 workloads: LFP, LDQ and VOD.

**AVERAGE RMS VOLTAGE:** The average supply voltage applied to the Tested Storage Product (TSP) as measured during the Measurement Intervals of the SPC-2 Tests.

**AVERAGE POWER FACTOR:** The ratio of average real power, in watts, to the average apparent power, in volt-amps flowing into the Tested Storage Product (TSP) during the Measurement Intervals of the SPC-2 Tests.

**NOMINAL POWER, W:** The average power consumption over the course of a day (*24 hours*), taking into account hourly load variations.

**NOMINAL TRAFFIC, MBPS:** The average data rate over the course of a day (*24 hours*), taking into account hourly load variations.

**NOMINAL MBPS/W:** The overall efficiency with which the reported data rate can be supported, reflected by the ratio of **NOMINAL TRAFFIC** versus the **NOMINAL POWER**.

**NOMINAL HEAT, BTU/HR:** The average amount of heat required to be dissipated over the course of a day (*24 hours*), taking into account hourly load variations. (*1 watt = 3.412 BTU/hr*)

**COMPOSITE METRICS:** The aggregated **NOMINAL POWER**, **NOMINAL TRAFFIC**, and **NOMINAL MBPS/W** for all three environments: **LOW**, **MEDIUM**, and **HIGH DAILY USAGE**.

**ANNUAL ENERGY USE, kWh:** An estimate of the average energy use across the three environments over the course of a year and computed as (**NOMINAL POWER** \* 24 \* 0.365).

**ENERGY COST, \$/kWh:** A standardized energy cost per kilowatt hour.

**ANNUAL ENERGY COST:** An estimate of the annual energy use across the three environments over the course of a year and computed as (**ANNUAL ENERGY USE** \* **ENERGY COST**).

## Priced Storage Configuration Pricing

Description	Qty	Unit Price	Discount	Extended Price with discount
IBM XIV Storage System Model GEN3	1	\$183,195.00	70.00%	\$54,958.50
2TB Interface Module w/12 2 TB drives	6	\$122,430.00	70.00%	\$220,374.00
2TB Data Module w/12 2 TB drives	9	\$122,430.00	70.00%	\$330,561.00
Modem	1	\$1,000.00	70.00%	\$300.00
US/CA/LA/AP 60A pin cord	1	\$3,000.00	70.00%	\$900.00
Module Software License	15	\$41,800.00	60.00%	\$250,800.00
Module Software Maintenance (3 years)	15	\$16,720.00	60.00%	\$100,320.00
Monthly maintenance (XIV hardware)	36	\$8,511.00	70.00%	\$91,918.80
8 Gbps FC switch w/24 port active, 24 SFPs	2	\$12,870.00	20.00%	\$20,592.00
3 year warranty extension (switch)	2	\$2,330.00	20.00%	\$3,728.00
Short wave 25 m fibre channel cable	36	\$189.00	20.00%	\$5,443.20
HBA (dual port 8 Gbps FC)	18	\$4,583.00	30.00%	\$57,745.80
<b>Total price</b>				<b>\$1,137,641.30</b>

The following pricing includes the following:

- Acknowledgement of new and existing hardware and/or software problems within four hours.
- Onsite presence of a qualified maintenance engineer or provision of a customer replaceable part within four hours of the above acknowledgement for any hardware failure that results in an inoperative Priced Storage Configuration component.

## Differences between the Tested Storage Configuration (TSC) and Priced Storage Configuration

There were no differences between the TSC and Priced Storage Configuration.

## Priced Storage Configuration Diagram

## **CONFIGURATION INFORMATION**

This portion of the Full Disclosure Report documents and illustrates the detailed information necessary to recreate the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC), so that the SPC-2 benchmark result produced by the BC may be independently reproduced.

In each of the following sections of this document, the appropriate Full Disclosure Report requirement, from the SPC-2 benchmark specification, is stated in italics followed by the information to fulfill the stated requirement.

### **Benchmark Configuration (BC)/Tested Storage Configuration (TSC) Diagram**

#### *Clause 10.6.6*

*The FDR will contain a one page BC/TSC diagram that illustrates all major components of the BC/TSC.*

The Benchmark Configuration (BC)/Tested Storage Configuration (TSC) is illustrated on page 22.

### **Storage Network Configuration**

#### *Clause 10.6.6.1*

*If a storage network was configured as a part of the Tested Storage Configuration and the Benchmark Configuration described in Clause 10.6.6 contains a high-level illustration of the network configuration, the Executive Summary will contain a one page topology diagram of the storage network as illustrated in Figure 10.11.*

The Benchmark Configuration (BC)/Tested Storage Configuration (TSC) was configured with local storage and, as such, did not employ a storage network.

### **Host System and Tested Storage Configuration Table**

#### *Clause 10.6.6.2*

*The FDR will contain a table that lists the major components of each Host System and the Tested Storage Configuration.*

The components that comprise each Host System and the Tested Storage Configuration are listed in the table that appears on page 22.

## Benchmark Configuration/Tested Storage Configuration Diagram

## Host System and Tested Storage Configuration Components

Host System3:	Tested Storage Configuration (TSC):
<b>3 – IBM Power 770 servers</b> , each with 8 – 3.3 GHz Power7 processor modules 8 cores per processor modules 256 KB L2 cache per core 4 MB L3 cache per core (eDram) 256 GiB main memory AIX 7.1 PCIe	18 – dual-port 8 Gbps HBAs (8 HBAs in each of 2 Host Systems 2 HBAs in the third Host System)  <b>IBM XIV® Storage System</b> 360 GiB memory/cache 6 – 2 TB Interface Modules 9 – 2 TB Data Modules 24 – 8 Gbps FC front-end connections (18 used) 30 – 4x6 Gbps SAS backend connection (30 used)
<b>Other BC Components:</b>	180 – 2 TB, 7200 RPM, SAS disk drives (12 disk drives per interface and data module)
1 – Yokogawa WT230 Digital Power Meter	2 – IBM 2498-B24 FC 8 Gbps switches  36 – Short Wave 25m fibre channel cables

## Customer Tunable Parameters and Options

### Clause 10.6.6.1

*All Benchmark Configuration (BC) components with customer tunable parameter and options that have been altered from their default values must be listed in the FDR. The FDR entry for each of those components must include both the name of the component and the altered value of the parameter or option. If the parameter name is not self-explanatory to a knowledgeable practitioner, a brief description of the parameter's use must also be included in the FDR entry.*

“Appendix B: Customer Tunable Parameters and Options” on page 89 contains the customer tunable parameters and options that have been altered from their default values for this benchmark.

## Tested Storage Configuration (TSC) Description

### Clause 10.6.6.2

*The Full Disclosure Report must include sufficient information to recreate the logical representation of the Tested Storage Configuration (TSC). In addition to customer tunable parameters and options (Clause 10.6.6.1), that information must include, at a minimum:*

- *A diagram and/or description of the following:*
  - *All physical components that comprise the TSC. Those components are also illustrated in the BC Configuration Diagram in Clause 10.6.5.7 and the Storage Network Configuration Diagram in Clause 10.6.5.8.*
  - *The logical representation of the TSC, configured from the above components that will be presented to the SPC-2 Workload Generator.*
- *Listings of scripts used to create the logical representation of the TSC.*
- *If scripts were not used, a description of the process used with sufficient detail to recreate the logical representation of the TSC.*

“Appendix C: Tested Storage Configuration (TSC) Creation” on page 90 contains the detailed information that describes how to create and configure the logical TSC.

## SPC-2 Workload Generator Storage Configuration

### Clause 10.6.6.3

*The Full Disclosure Report will include all SPC-2 Workload Generator storage configuration commands and parameters used in the SPC-2 benchmark measurement.*

The SPC-2 Workload Generator storage configuration commands and parameters for this measurement appear in “Appendix D: SPC-2 Workload Generator Storage Commands and Parameters” on page 97.

## **SPC-2 DATA REPOSITORY**

This portion of the Full Disclosure Report presents the detailed information that fully documents the various SPC-2 storage capacities and mappings used in the Tested Storage Configuration. "SPC-2 Data Repository Definitions" on page 84 contains definitions of terms specific to the SPC-2 Data Repository.

In each of the following sections of this document, the appropriate Full Disclosure Report requirement, from the SPC-2 benchmark specification, is stated in italics followed by the information to fulfill the stated requirement.

### **SPC-2 Storage Capacities and Relationships**

*Two tables and an illustration documenting the storage capacities and relationships of the SPC-2 Storage Hierarchy (Clause 2.1) shall be included in the FDR.*

#### **SPC-2 Storage Capacities**

<b>SPC-2 Storage Capacities</b>		
<b>Storage Hierarchy Component</b>	<b>Units</b>	<b>Capacity</b>
Total ASU Capacity	Gigabytes (GB)	154,618.823
Addressable Storage Capacity	Gigabytes (GB)	157,971.099
Configured Storage Capacity	Gigabytes (GB)	351,400.190
Physical Storage Capacity	Gigabytes (GB)	360,071.808
Data Protection ( <i>Mirroring</i> )	Gigabytes (GB)	157,971.099
Required Storage ( <i>sparing</i> )	Gigabytes (GB)	35,457.992
Global Storage Overhead	Gigabytes (GB)	5,491.891
Total Unused Storage	Gigabytes (GB)	9,884.280

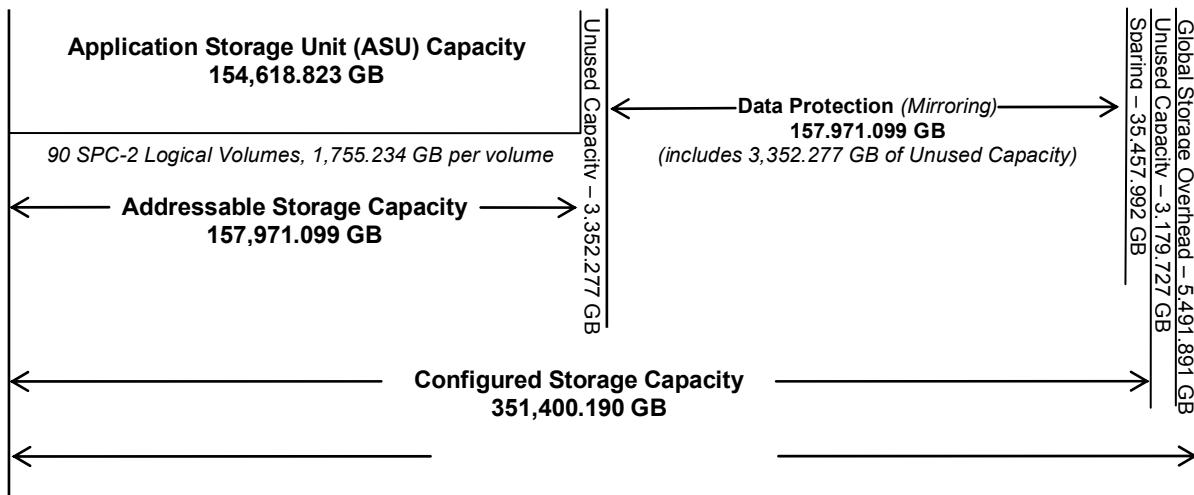

## SPC-2 Storage Hierarchy Ratios

	Addressable Storage Capacity	Configured Storage Capacity	Physical Storage Capacity
<b>Total ASU Capacity</b>	97.88%	44.00%	42.94%
<b>Data Protection (<i>Mirroring</i>)</b>		44.95%	43.87%
<b>Addressable Storage Capacity</b>		44.95%	43.87%
<b>Required Storage (<i>sparing</i>)</b>		10.09%	9.85%
<b>Configured Storage Capacity</b>			97.59%
<b>Global Storage Overhead</b>			1.53%
<b>Unused Storage:</b>			
<b>Addressable</b>	2.12%		
<b>Configured</b>		0.00%	
<b>Physical</b>			0.88%

The Physical Storage Capacity consisted of 360,071.080 GB distributed over 180 disk drives each with a formatted capacity of 2,000.399 GB. There was 3,179.727 GB (0.88%) of Unused Storage within the Physical Storage Capacity. Global Storage Overhead consisted of 5,491.891 GB (1.53%) of the Physical Storage Capacity. There was 0.000 GB (0.00%) of Unused Storage within the Configured Storage Capacity. The Total ASU Capacity utilized 97.88% of the Addressable Storage Capacity resulting in 3,352.277 GB (2.12%) of Unused Storage within the Addressable Storage Capacity. The Data Protection (*Mirroring*) capacity was 157,971.099 GB of which 154,618.823 GB was utilized. The total Unused Storage was 9,884.280 GB.

## SPC-2 Storage Capacities and Relationships Illustration

The various storage capacities configured in the benchmark result are illustrated below (*not to scale*).

## Storage Capacity Utilization

### Clause 10.6.8.2

The FDR will include a table illustrating the storage capacity utilization values defined for Application Utilization (Clause 2.8.1), Protected Application Utilization (Clause 2.8.2), and Unused Storage Ratio (Clause 2.8.3).

### Clause 2.8.1

**Application Utilization** is defined as Total ASU Capacity divided by Physical Storage Capacity.

### Clause 2.8.2

**Protected Application Utilization** is defined as (Total ASU Capacity plus total Data Protection Capacity minus unused Data Protection Capacity) divided by Physical Storage Capacity.

### Clause 2.8.3

**Unused Storage Ratio** is defined as Total Unused Capacity divided by Physical Storage Capacity and may not exceed 45%.

SPC-1 Storage Capacity Utilization	
Application Utilization	42.95%
Protected Application Utilization	85.88%
Unused Storage Ratio	2.75%

## Logical Volume Capacity and ASU Mapping

### Clause 10.6.7.2

A table illustrating the capacity of the Application Storage Unit (ASU) and the mapping of Logical Volumes to ASU will be provided in the FDR. Capacity must be stated in gigabytes (GB) as a value with a minimum of two digits to the right of the decimal point. Each Logical Volume will be sequenced in the table from top to bottom per its position in the contiguous address space of the ASU. Each Logical Volume entry will list its total capacity, the portion of that capacity used for the ASU, and any unused capacity.

Logical Volume (LV) Capacity and Mapping			
ASU (154,618.823 GB)			
	Total Capacity (GB)	Capacity Used (GB)	Capacity Unused (GB)
Logical Volumes 1-90	1,755.234 per LV	1,717.987 per LV	37.248 per LV

See the Storage Definition (*sd*) entries in “Appendix D: SPC-2 Workload Generator Storage Commands and Parameters” on page 97 for more detailed configuration information.

## **SPC-2 TEST EXECUTION RESULTS**

This portion of the Full Disclosure Report documents the results of the various SPC-2 Test, Test Phases, Test Run Sequences, and Test Runs. “SPC-2 Test Execution Definitions” on page 85 contains definitions of terms specific to the SPC-2 Data Repository.

In each of the following sections of this document, the appropriate Full Disclosure Report requirement, from the SPC-2 benchmark specification, is stated in italics followed by the information to fulfill the stated requirement.

### **SPC-2 Tests, Test Phases, Test Run Sequences, and Test Runs**

The SPC-2 benchmark consists of the following Tests, Test Phases, Test Run Sequences, and Test Runs:

- **Data Persistence Test**
  - Data Persistence Test Run 1
  - Data Persistence Test Run 2
- **Large File Processing Test**
  - WRITE ONLY Test Phase
    - Test Run Sequence 1
      - ✓ Test Run 1 – 1024 KiB Transfer – maximum number of Streams
      - ✓ Test Run 2 – 1024 KiB Transfer – 50% of Test Run 1’s Streams value
      - ✓ Test Run 3 – 1024 KiB Transfer – 25% of Test Run 1’s Streams value
      - ✓ Test Run 4 – 1024 KiB Transfer – 12.5% of Test Run 1’s Streams value
      - ✓ Test Run 5 – 1024 KiB Transfer – single (1) Stream
    - Test Run Sequence 2
      - ✓ Test Run 6 – 256 KiB Transfer – maximum number of Streams
      - ✓ Test Run 7 – 256 KiB Transfer – 50% of Test Run 6’s Streams value
      - ✓ Test Run 8 – 256 KiB Transfer – 25% of Test Run 6’s Streams value
      - ✓ Test Run 9 – 256 KiB Transfer – 12.5% of Test Run 6’s Streams value
      - ✓ Test Run 10 – 256 KiB Transfer – single (1) Stream
  - READ-WRITE Test Phase
    - Test Run Sequence 3
      - ✓ Test Run 11 – 1024 KiB Transfer – maximum number of Streams
      - ✓ Test Run 12 – 1024 KiB Transfer – 50% of Test Run 11’s Streams value
      - ✓ Test Run 13 – 1024 KiB Transfer – 25% of Test Run 11’s Streams value
      - ✓ Test Run 14 – 1024 KiB Transfer – 12.5% of Test Run 11’s Streams value
      - ✓ Test Run 15 – 1024 KiB Transfer – single (1) Stream
    - Test Run Sequence 4
      - ✓ Test Run 16 – 256 KiB Transfer – maximum number of Streams
      - ✓ Test Run 17 – 256 KiB Transfer – 50% of Test Run 16’s Streams value
      - ✓ Test Run 18 – 256 KiB Transfer – 25% of Test Run 16’s Streams value
      - ✓ Test Run 19 – 256 KiB Transfer – 12.5% of Test Run 16’s Streams value
      - ✓ Test Run 20 – 256 KiB Transfer – single (1) Stream

▪ **Large File Processing Test (*continued*)**

- READ ONLY Test Phase
  - Test Run Sequence 5
    - ✓ Test Run 21 – 1024 KiB Transfer – maximum number of Streams
    - ✓ Test Run 22 – 1024 KiB Transfer – 50% of Test Run 21’s Streams value
    - ✓ Test Run 23 – 1024 KiB Transfer – 25% of Test Run 21’s Streams value
    - ✓ Test Run 24 – 1024 KiB Transfer – 12.5% of Test Run 21’s Streams value
    - ✓ Test Run 25 – 1024 KiB Transfer – single (1) Stream
  - Test Run Sequence 6
    - ✓ Test Run 26 – 256 KiB Transfer – maximum number of Streams
    - ✓ Test Run 27 – 256 KiB Transfer – 50% of Test Run 26’s Streams value
    - ✓ Test Run 28 – 256 KiB Transfer – 25% of Test Run 26’s Streams value
    - ✓ Test Run 29 – 256 KiB Transfer – 12.5% of Test Run 26’s Streams value
    - ✓ Test Run 30 – 256 KiB Transfer – single (1) Stream

▪ **Large Database Query Test**

- 1024 KiB TRANSFER SIZE Test Phase
  - Test Run Sequence 1
    - ✓ Test Run 1 – 4 I/O Requests Outstanding – maximum number of Streams
    - ✓ Test Run 2 – 4 I/O Requests Outstanding – 50% of Test Run 1’s Streams value
    - ✓ Test Run 3 – 4 I/O Requests Outstanding – 25% of Test Run 1’s Streams value
    - ✓ Test Run 4 – 4 I/O Requests Outstanding – 12.5% of Test Run 1’s Streams value
    - ✓ Test Run 5 – 4 I/O Requests Outstanding – single (1) Stream
  - Test Run Sequence 2
    - ✓ Test Run 6 – 1 I/O Request Outstanding – maximum number of Streams
    - ✓ Test Run 7 – 1 I/O Request Outstanding – 50% of Test Run 6’s Streams value
    - ✓ Test Run 8 – 1 I/O Request Outstanding – 25% of Test Run 6’s Streams value
    - ✓ Test Run 9 – 1 I/O Request Outstanding – 12.5% of Test Run 6’s Streams value
    - ✓ Test Run 10 – 1 I/O Request Outstanding – single (1) Stream
- 64 KiB TRANSFER SIZE Test Phase
  - Test Run Sequence 3
    - ✓ Test Run 11 – 4 I/O Requests Outstanding – maximum number of Streams
    - ✓ Test Run 12 – 4 I/O Requests Outstanding – 50% of Test Run 11’s Streams value
    - ✓ Test Run 13 – 4 I/O Requests Outstanding – 25% of Test Run 11’s Streams value
    - ✓ Test Run 14 – 4 I/O Requests Outstanding – 12.5% of Test Run 11’s Streams value
    - ✓ Test Run 15 – 4 I/O Requests Outstanding – single (1) Stream
  - Test Run Sequence 4
    - ✓ Test Run 16 – 1 I/O Request Outstanding – maximum number of Streams
    - ✓ Test Run 17 – 1 I/O Request Outstanding – 50% of Test Run 16’s Streams value
    - ✓ Test Run 18 – 1 I/O Request Outstanding – 25% of Test Run 16’s Streams value
    - ✓ Test Run 19 – 1 I/O Request Outstanding – 12.5% of Test Run 16’s Streams value
    - ✓ Test Run 20 – 1 I/O Request Outstanding – single (1) Stream

▪ **Video on Demand Delivery Test**

- Video on Demand Delivery Test Run

Each Test is an atomic unit that must be executed from start to finish before any other Test, Test Phase, or Test Run may be executed. The Tests may be executed in any sequence.

The results from each Test, Test Phase, and Test Run are listed below along with a more detailed explanation of each component.

## Large File Processing Test

### Clause 6.4.2.1

The Large File Processing Test consists of the I/O operations associated with the type of applications, in a wide range of fields, which require simple sequential processing of one or more large files. Specific examples of those types of applications include scientific computing and large-scale financial processing.

### Clause 6.4.2.2

The Large File Processing Test has three Test Phases, which shall be executed in the following uninterrupted sequence:

1. WRITE ONLY
2. READ-WRITE
3. READ ONLY

The BC shall not be restarted or manually disturbed, altered, or adjusted during the execution of the Large File Processing Test. If power is lost to the BC during this Test all results shall be rendered invalid and the Test re-run in its entirety.

### Clause 10.6.8.1

The Full Disclosure Report will contain the following content for the Large File Processing Test:

1. A listing of the SPC-2 Workload Generator commands and parameters used to execute each of the Test Runs in the Large File Processing Test.
2. The human readable SPC-2 Test Results File for each of the Test Runs in the Large File Processing Test.
3. A table that contains the following information for each Test Run in all three Test Phases of the Large File Processing Test:
  - The number Streams specified.
  - The Ramp-Up duration in seconds.
  - The Measurement Interval duration in seconds.
  - The average data rate, in MB per second, for the Measurement Interval.
  - The average data rate, in MB per second, per Stream for the Measurement Interval.
4. Average Data Rate and Average Data Rate per Stream graphs as defined in Clauses 10.1.1 and 10.1.2.

## SPC-2 Workload Generator Commands and Parameters

The SPC-2 Workload Generator commands and parameters for the Large File Processing Test Runs are documented in “Appendix E: SPC-2 Workload Generator Execution Commands and Parameters” on Page 105.

## SPC-2 Test Results File

A link to the SPC-2 Test Results file generated from the Large File Processing Test Runs is listed below.

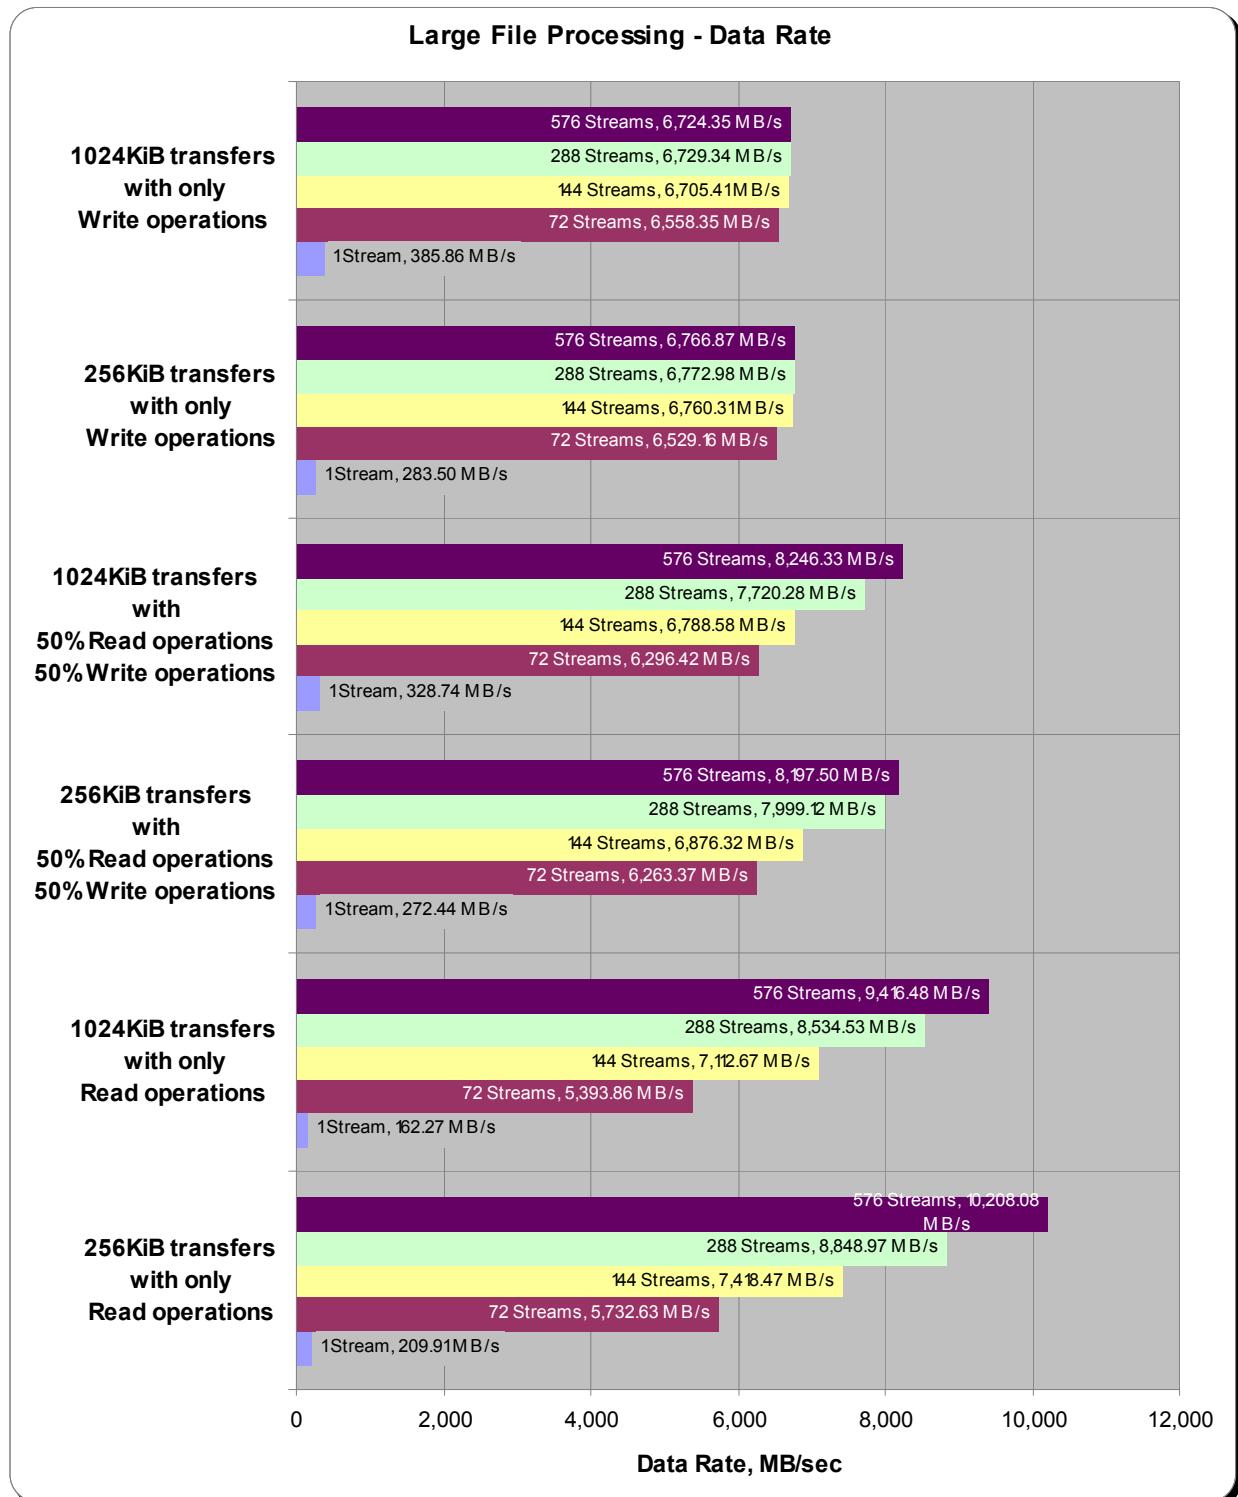

### [SPC-2 Large File Processing Test Results File](#)

#### SPC-2 Large File Processing Average Data Rates (MB/s)

The average Data Rate (MB/s) for each Test Run in the three Test Phases of the SPC-2 Large File Processing Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
Write 1024KiB	385.86	6,558.35	6,705.41	6,729.34	6,724.35
Write 256KiB	283.50	6,529.16	6,760.31	6,772.98	6,766.87
Read/Write 1024KiB	328.74	6,296.42	6,788.58	7,720.28	8,246.33
Read/Write 256KiB	272.44	6,263.37	6,876.32	7,999.12	8,197.50
Read 1024KiB	162.27	5,393.86	7,112.67	8,534.53	9,416.48
Read 256KiB	209.91	5,732.63	7,418.47	8,848.97	10,208.08

## SPC-2 Large File Processing Average Data Rates Graph

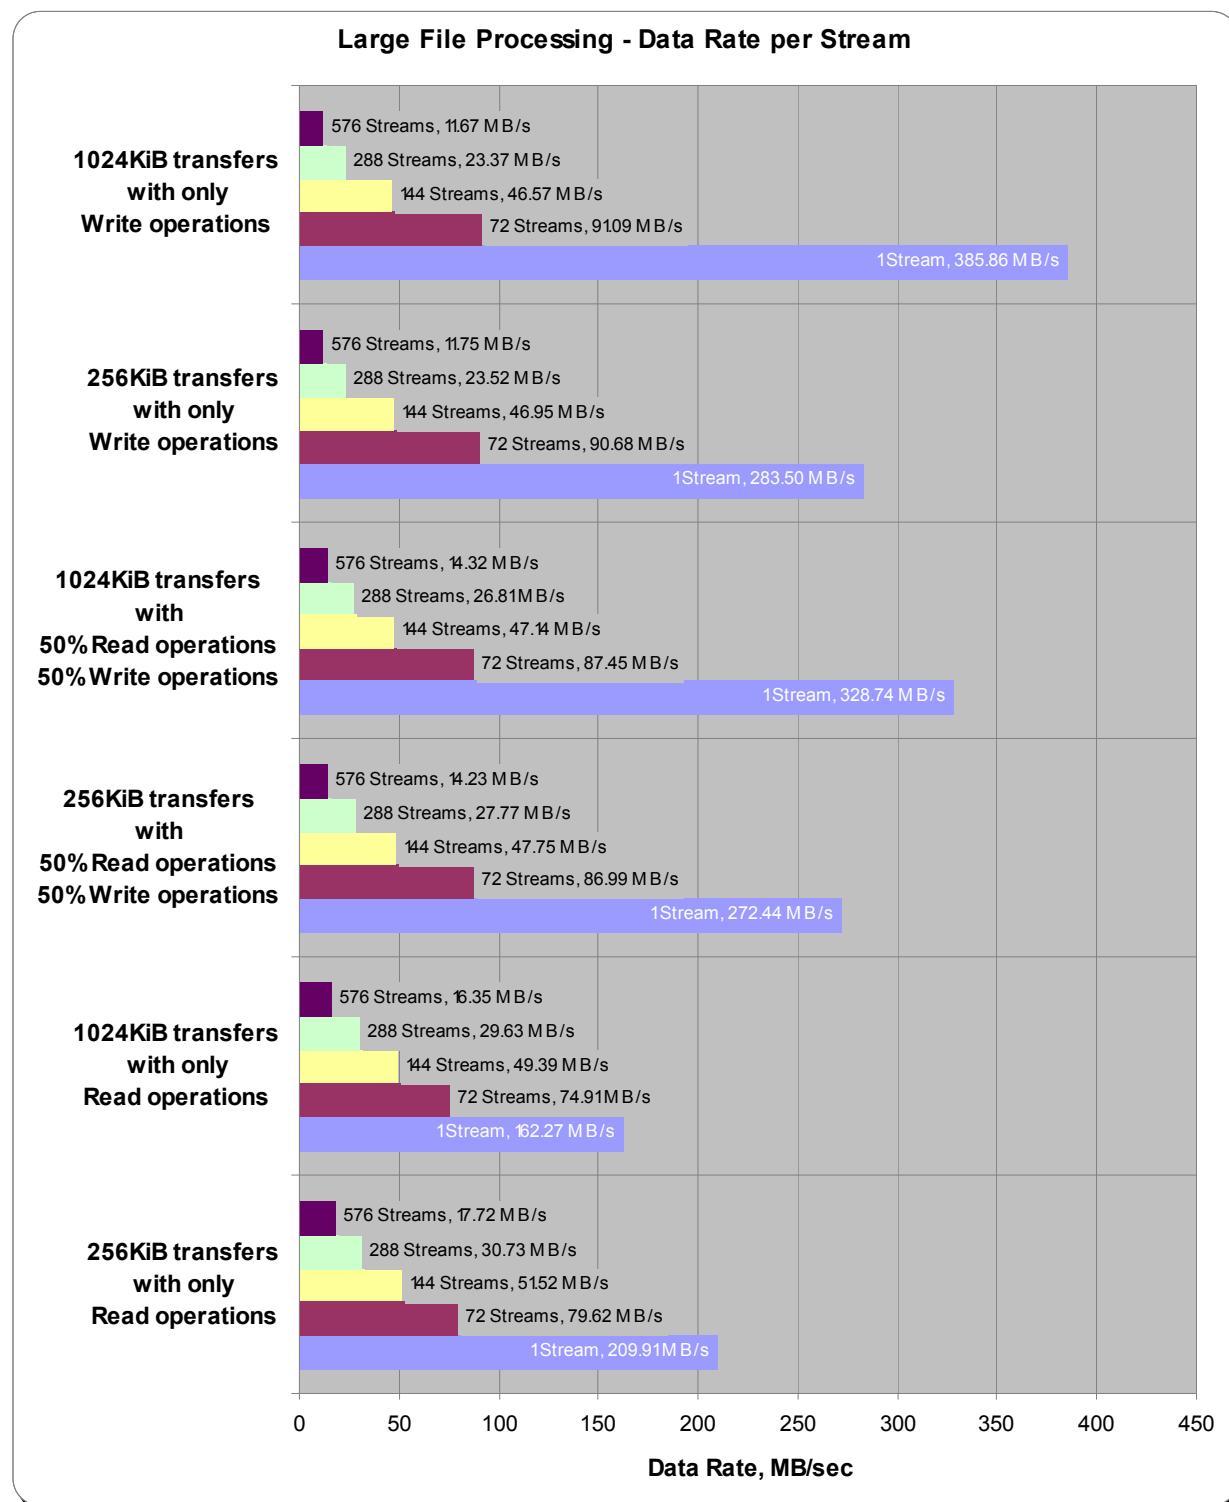

### SPC-2 Large File Processing Average Data Rate per Stream

The average Data Rate per Stream for each Test Run in the three Test Phases of the SPC-2 Large File Processing Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
Write 1024KiB	385.86	91.09	46.57	23.37	11.67
Write 256KiB	283.50	90.68	46.95	23.52	11.75
Read/Write 1024KiB	328.74	87.45	47.14	26.81	14.32
Read/Write 256KiB	272.44	86.99	47.75	27.77	14.23
Read 1024KiB	162.27	74.91	49.39	29.63	16.35
Read 256KiB	209.91	79.62	51.52	30.73	17.72

## SPC-2 Large File Processing Average Data Rate per Stream Graph

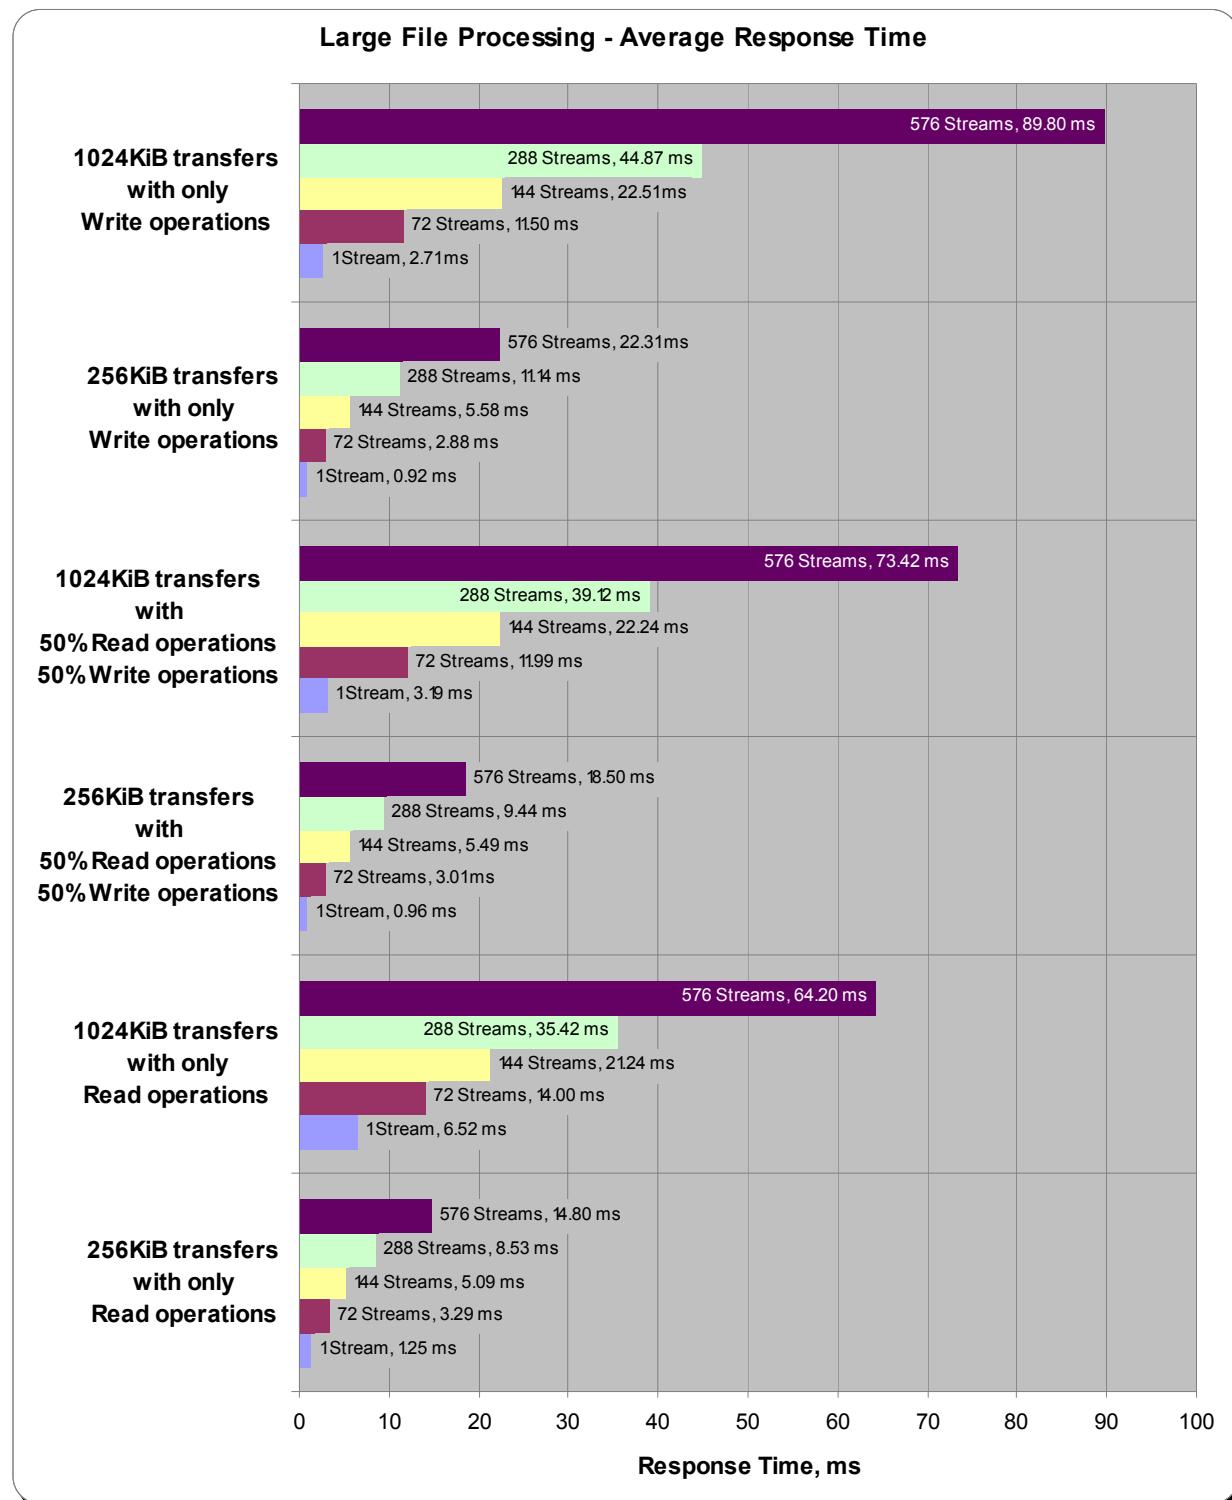

### SPC-2 Large File Processing Average Response Time

The average Response Time, milliseconds (ms), for each Test Run in the three Test Phases of the SPC-2 Large File Processing Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
Write 1024KiB	2.71	11.50	22.51	44.87	89.80
Write 256KiB	0.92	2.88	5.58	11.14	22.31
Read/Write 1024KiB	3.19	11.99	22.24	39.12	73.42
Read/Write 256KiB	0.96	3.01	5.49	9.44	18.50
Read 1024KiB	6.52	14.00	21.24	35.42	64.20
Read 256KiB	1.25	3.29	5.09	8.53	14.80

## SPC-2 Large File Processing Average Response Time Graph

## Large File Processing Test – WRITE ONLY Test Phase

### Clause 10.6.8.1.1

1. A table that will contain the following information for each "WRITE ONLY, 1024 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
2. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "WRITE ONLY, 1024 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.
3. A table that will contain the following information for each "WRITE ONLY, 256 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
4. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "WRITE ONLY, 256 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.

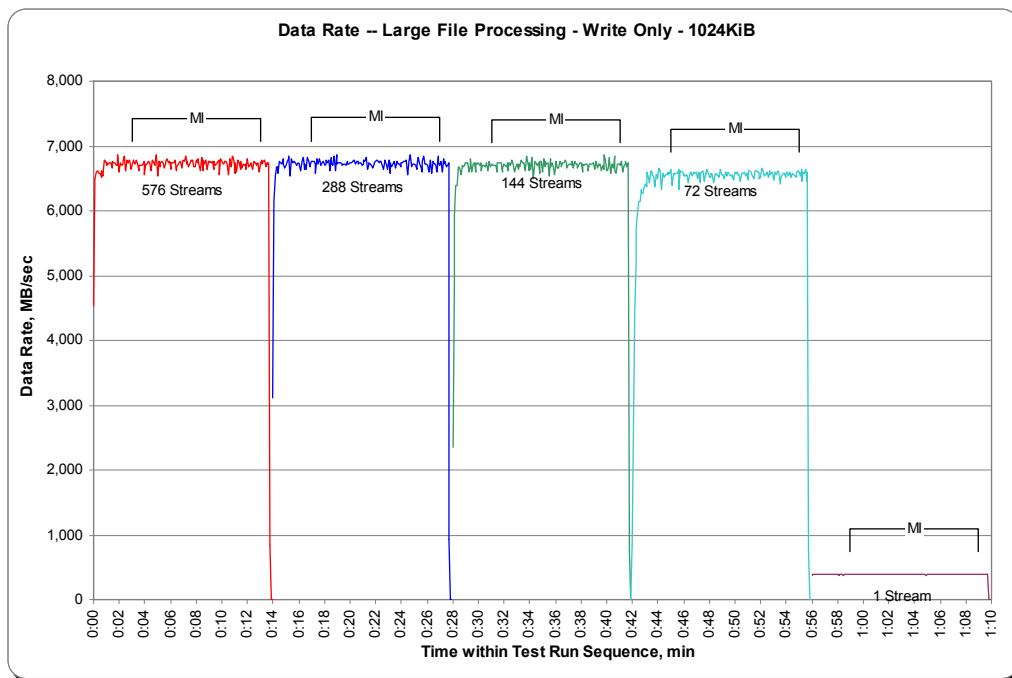

The SPC-2 "Large File Processing/Write Only/1024 KiB Transfer Size" and "Large File Processing/Write Only/256 KiB Transfer Size" data tables are not embedded in this document due to size. The tables are available via the URLs listed below:

### **SPC-2 "Large File Processing/Write Only/1024 KiB Transfer Size" Test Run Data**

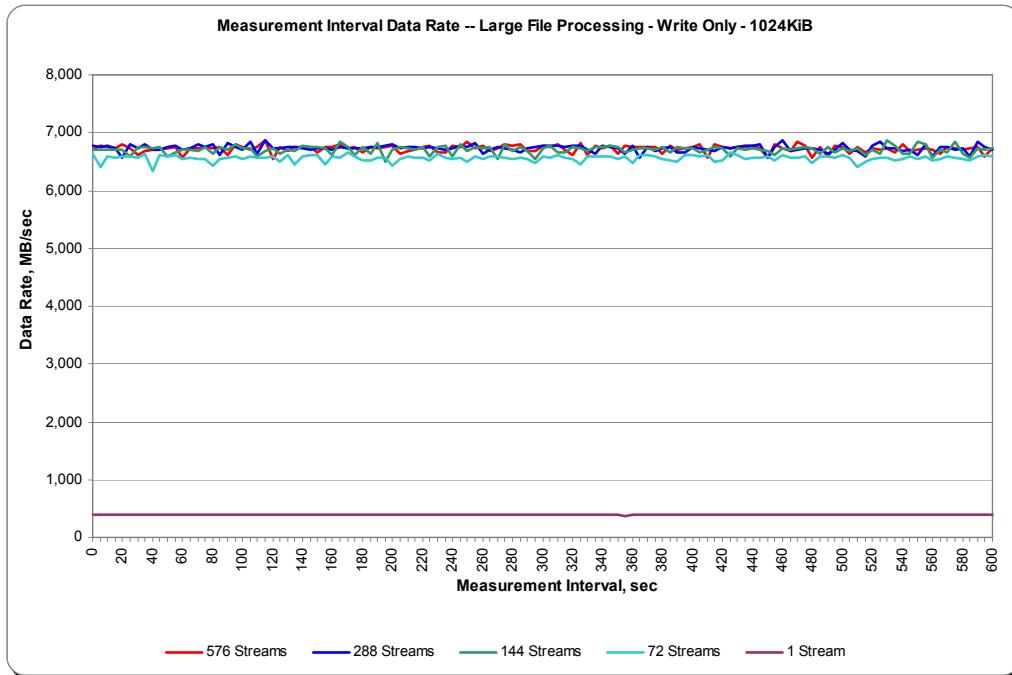

### **SPC-2 "Large File Processing/Write Only/256 KiB Transfer Size" Test Run Data**

The corresponding graphs to illustrate the average Data Rate, average Data Rate per Stream, and average Response Time produced by each of the Test Runs appear on next four pages.

**SPC-2 “Large File Processing/ WRITE ONLY/1024 KiB Transfer Size” Average Data Rate Graph – Complete Test Run**

## Large File Processing Test – READ-WRITE Test Phase

### Clause 10.6.8.1.2

1. A table that will contain the following information for each "READ-WRITE, 1024 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
2. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "READ-WRITE, 1024 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.
3. A table that will contain the following information for each "READ-WRITE, 256 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
4. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "READ-WRITE, 256 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.

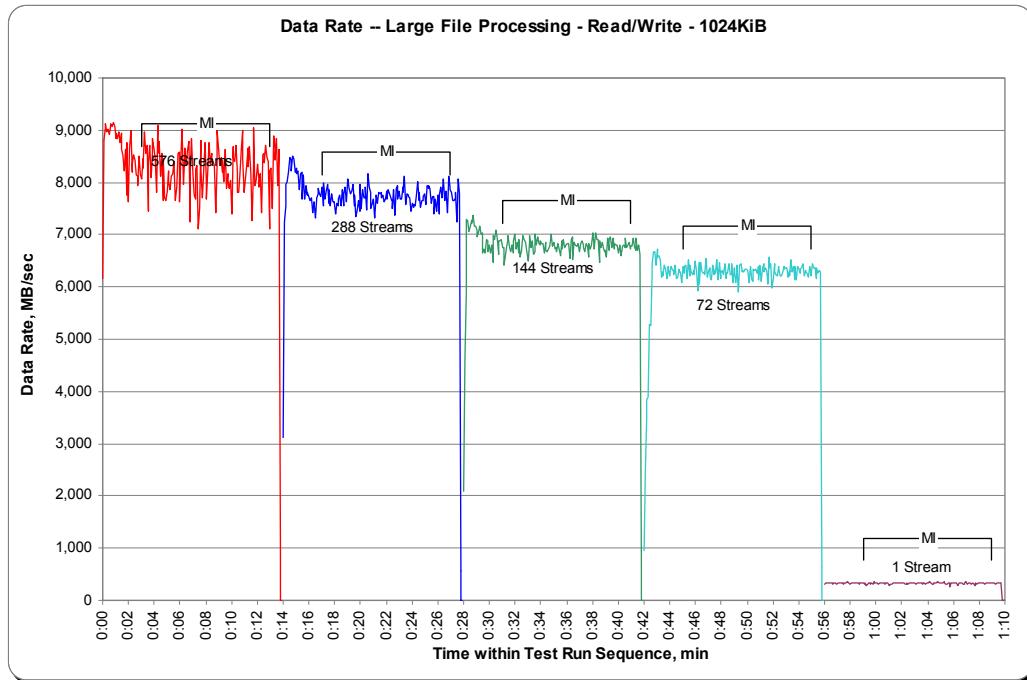

The SPC-2 "Large File Processing/READ-WRITE/1024 KiB Transfer Size" and "Large File Processing/ READ-WRITE /256 KiB Transfer Size" data tables are not embedded in this document due to size. The tables are available via the URLs listed below:

**SPC-2 "Large File Processing/Read-Write/1024 KiB Transfer Size" Test Run Data**

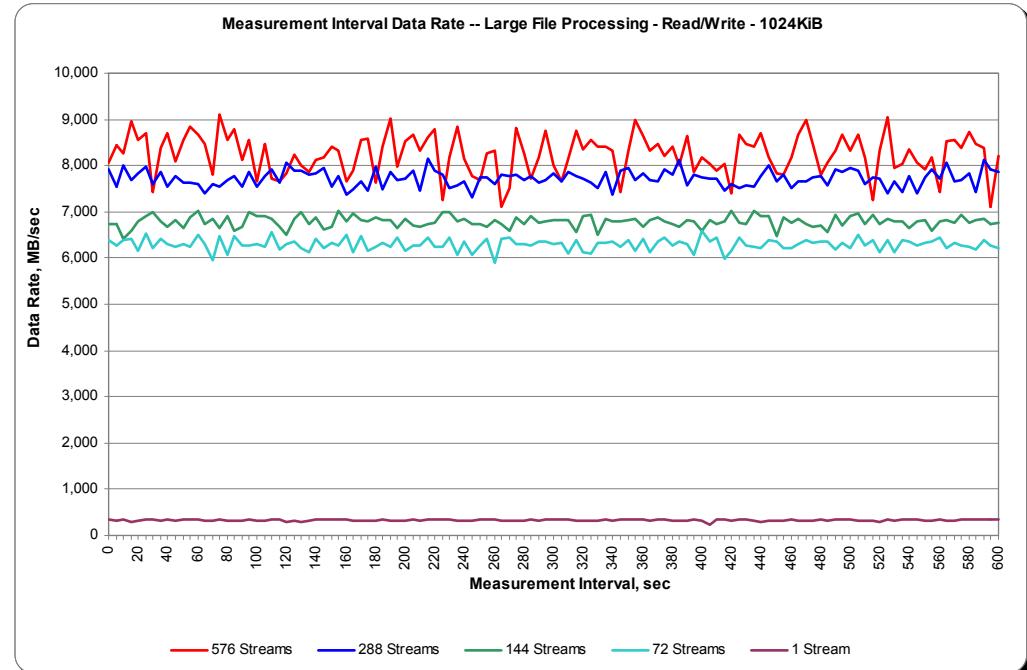

**SPC-2 "Large File Processing/ Read-Write /256 KiB Transfer Size" Test Run Data**

The corresponding graphs to illustrate the average Data Rate, average Data Rate per Stream, and average Response Time produced by each of the Test Runs appear on next four pages.

**SPC-2 “Large File Processing/READ-WRITE/256 KiB Transfer Size” Average Response Time Graph**

## Large File Processing Test – READ ONLY Test Phase

### Clause 10.6.8.1.3

1. A table that will contain the following information for each "READ ONLY, 1024 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
2. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "READ ONLY, 1024 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.
3. A table that will contain the following information for each "READ ONLY, 256 KiB Transfer Size" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
4. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "READ ONLY, 256 KiB Transfer Size" Test Runs as specified in Clauses 10.1.4 – 10.1.6.

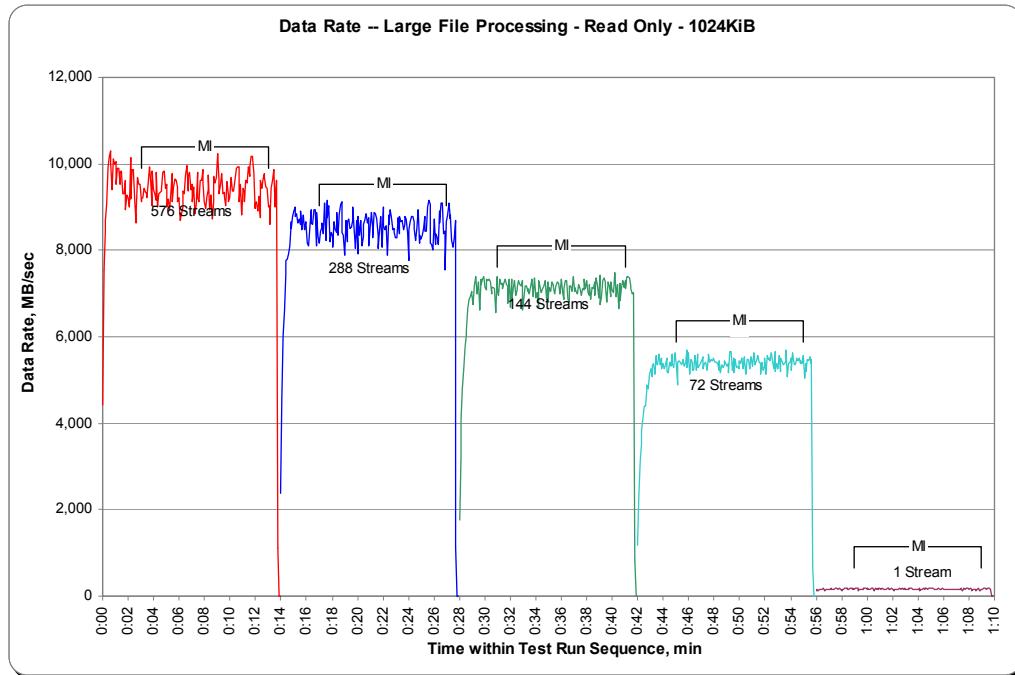

The SPC-2 "Large File Processing/READ ONLY/1024 KiB Transfer Size" and "Large File Processing/ READ ONLY /256 KiB Transfer Size" data tables are not embedded in this document due to size. The tables are available via the URLs listed below:

**SPC-2 "Large File Processing/Read Only/1024 KiB Transfer Size" Test Run Data**

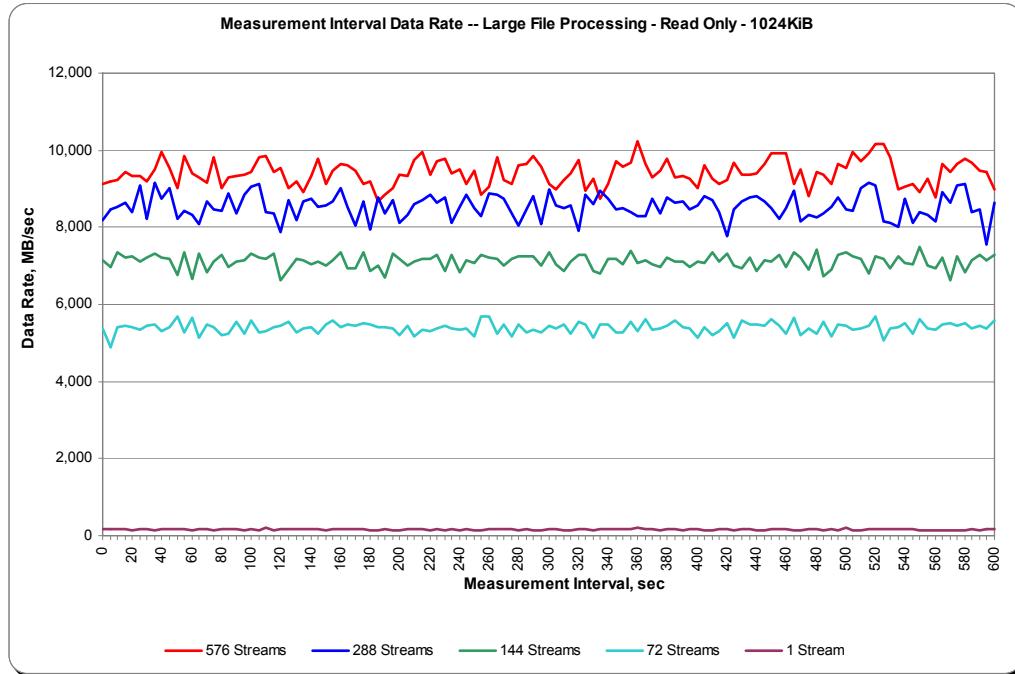

**SPC-2 "Large File Processing/ Read Only /256 KiB Transfer Size" Test Run Data**

The corresponding graphs to illustrate the average Data Rate, average Data Rate per Stream, and average Response Time produced by each of the Test Runs appear on next four pages.

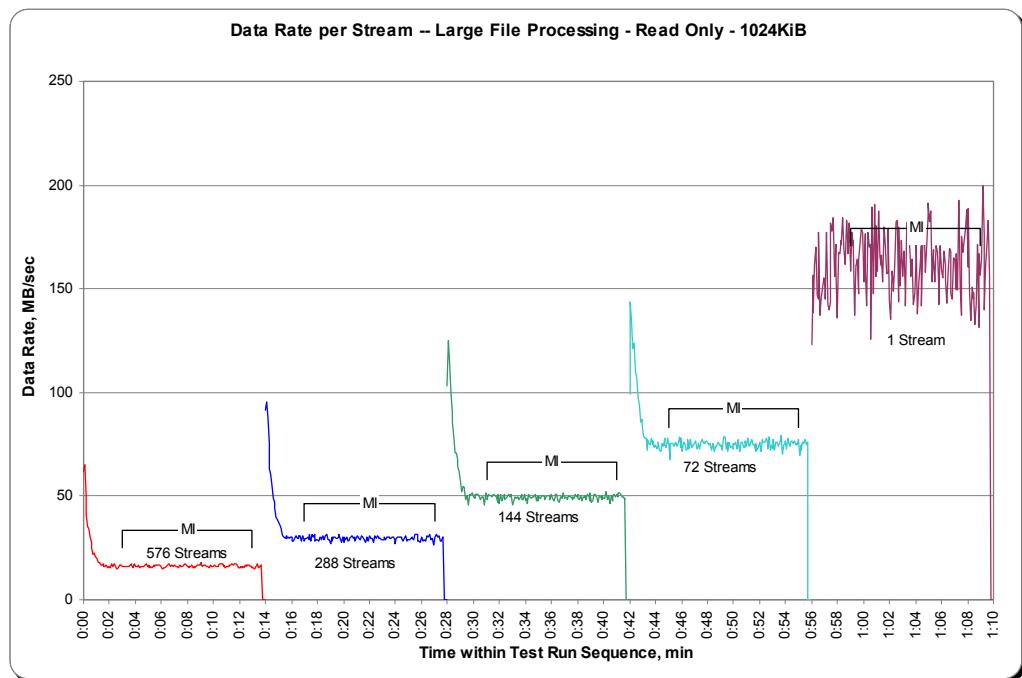

**SPC-2 “Large File Processing/READ ONLY/1024 KiB Transfer Size” Average Data Rate Graph – Complete Test Run**

**SPC-2 “Large File Processing/READ ONLY/256 KiB Transfer Size” Average Data Rate Graph – Measurement Interval (MI) Only**

**SPC-2 “Large File Processing/READ ONLY/256 KiB Transfer Size” Average Data Rate per Stream Graph**

**SPC-2 “Large File Processing/READ ONLY/256 KiB Transfer Size” Average Response Time Graph**

## Large Database Query Test

### Clause 6.4.3.1

*The Large Database Query Test is comprised of a set of I/O operations representative of scans or joins of large relational tables such as those performed for data mining or business intelligence.*

### Clause 6.4.3.2

*The Large Database Query Test has two Test Phases, which shall be executed in the following uninterrupted sequence:*

1. 1024 KIB TRANSFER SIZE
2. 64 KIB TRANSFER SIZE

*The BC shall not be restarted or manually disturbed, altered, or adjusted during the execution of the Large File Processing Test. If power is lost to the BC during this Test all results shall be rendered invalid and the Test re-run in its entirety.*

### Clause 10.6.8.2

*The Full Disclosure Report will contain the following content for the Large Database Query Test:*

1. *A listing of the SPC-2 Workload Generator commands and parameters used to execute each of the Test Runs in the Large Database Query Test.*
2. *The human readable SPC-2 Test Results File for each of the Test Runs in the Large Database Query Test.*
3. *A table that contains the following information for each Test Run in the two Test Phases of the Large Database Query Test:*
  - *The number Streams specified.*
  - *The Ramp-Up duration in seconds.*
  - *The Measurement Interval duration in seconds.*
  - *The average data rate, in MB per second, for the Measurement Interval.*
  - *The average data rate, in MB per second, per Stream for the Measurement Interval.*
4. *Average Data Rate and Average Data Rate per Stream graphs as defined in Clauses 10.1.1 and 10.1.2.*

## SPC-2 Workload Generator Commands and Parameters

The SPC-2 Workload Generator commands and parameters for the Large Database Query Test Runs are documented in “Appendix E: SPC-2 Workload Generator Execution Commands and Parameters” on Page 105.

## SPC-2 Test Results File

A link to the SPC-2 Test Results file generated from the Large Database Query Test Runs is listed below.

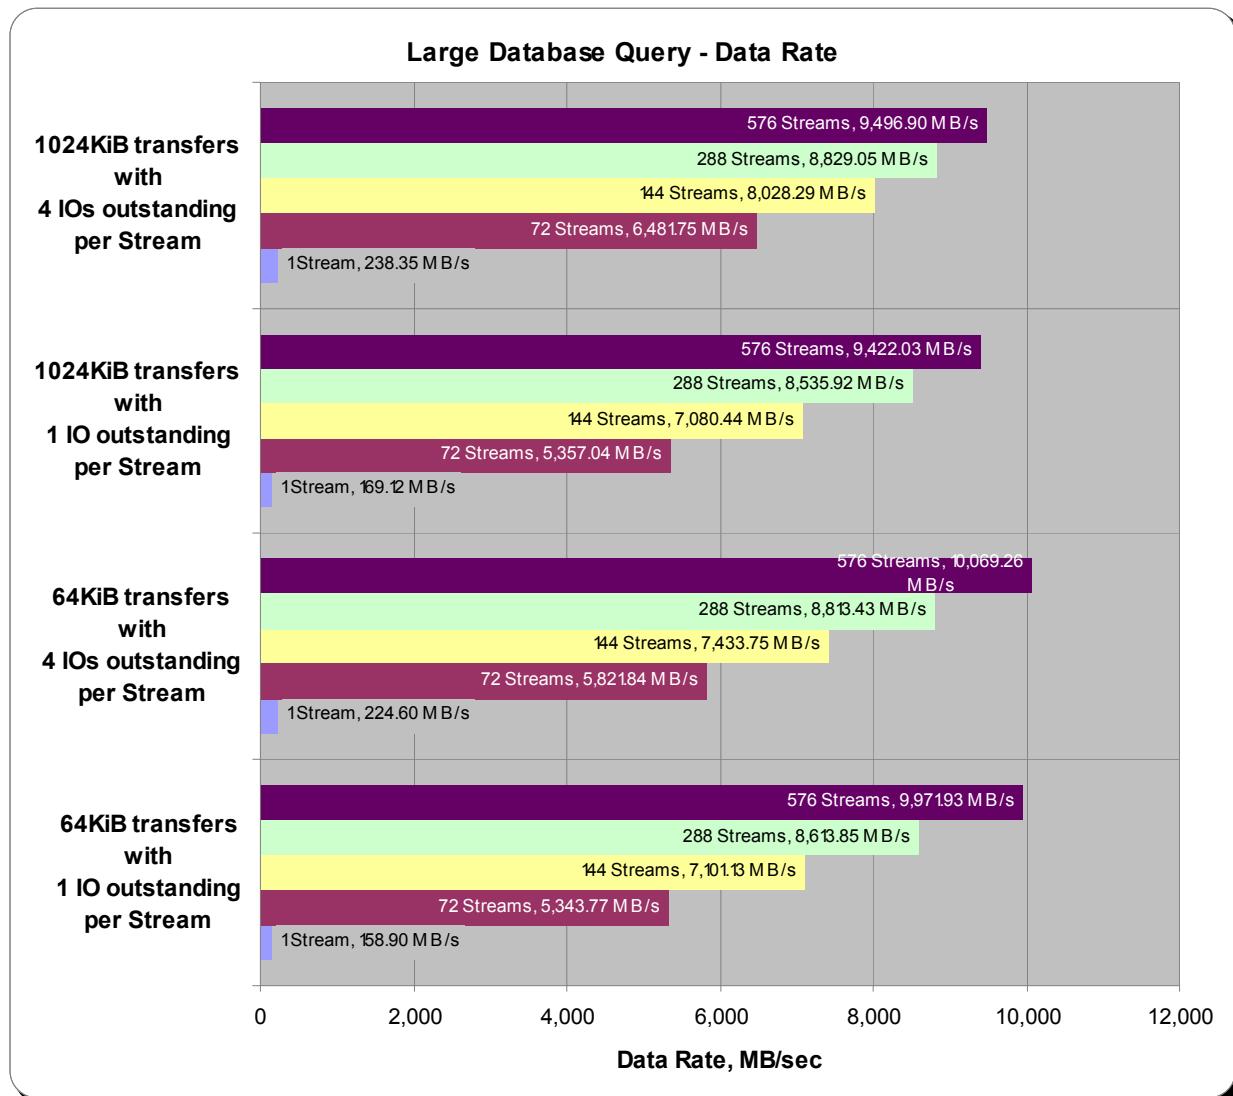

### [SPC-2 Large Database Query Test Results File](#)

### SPC-2 Large Database Query Average Data Rates (MB/s)

The average Data Rate (MB/s) for each Test Run in the two Test Phases of the SPC-2 Large Database Query Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
1024KiB w/ 4 IOs/Stream	238.35	6,481.75	8,028.29	8,829.05	9,496.90
1024KiB w/ 1 IO/Stream	169.12	5,357.04	7,080.44	8,535.92	9,422.03
64KiB w/ 4 IOs/Stream	224.60	5,821.84	7,433.75	8,813.43	10,069.26
64KiB w/ 1 IO/Stream	158.90	5,343.77	7,101.13	8,613.85	9,971.93

### SPC-2 Large Database Query Average Data Rates Graph

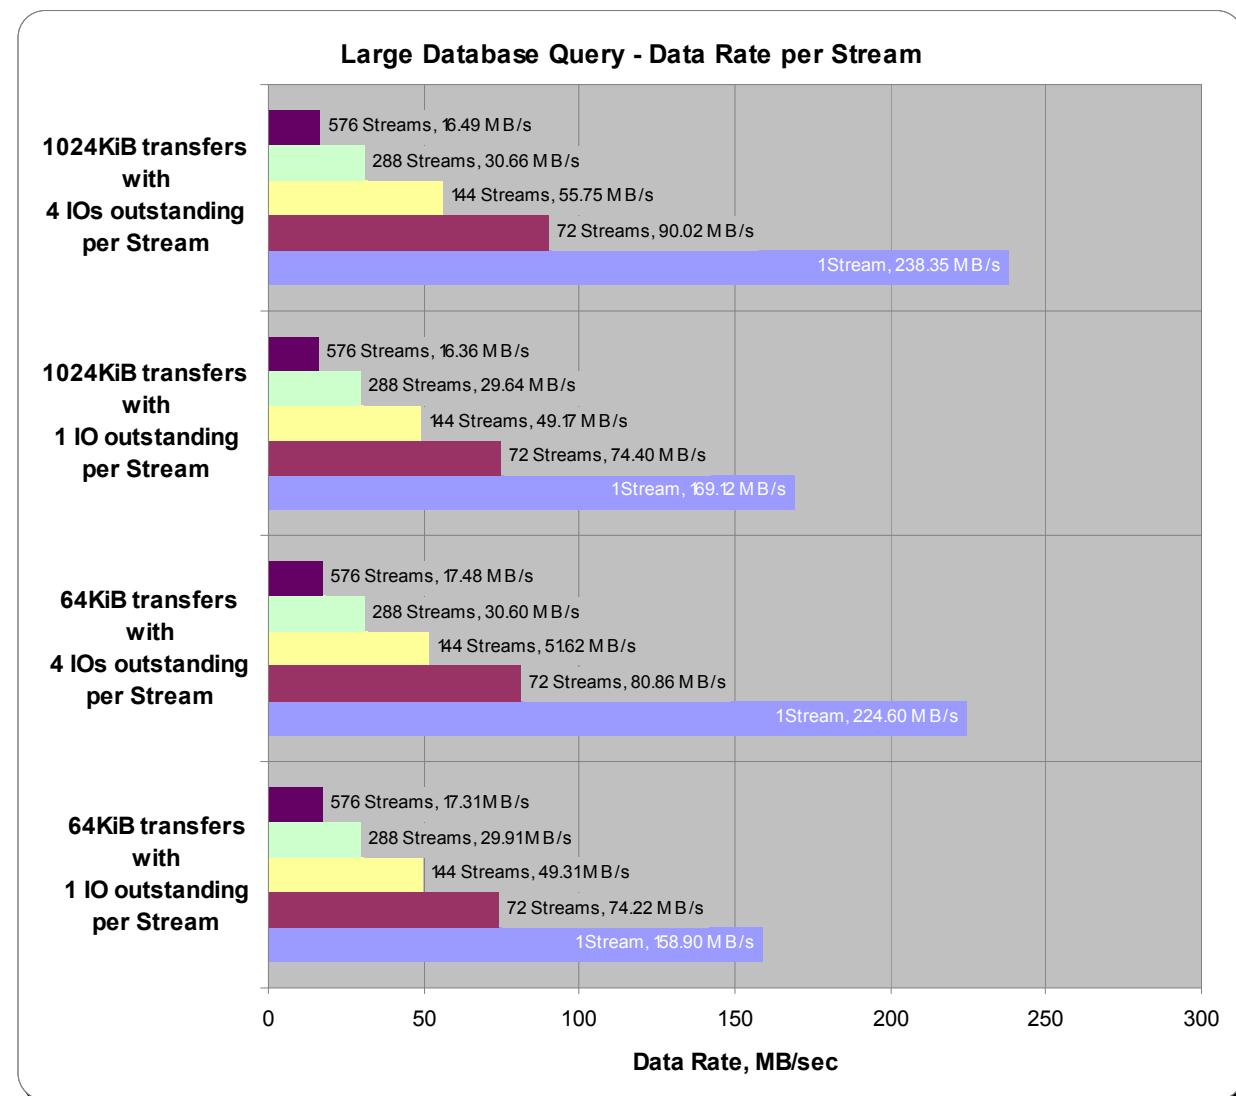

## SPC-2 Large Database Query Average Data Rate per Stream

The average Data Rate per Stream for each Test Run in the two Test Phases of the SPC-2 Large Database Query Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
1024KiB w/ 4 IOs/Stream	238.35	90.02	55.75	30.66	16.49
1024KiB w/ 1 IO/Stream	169.12	74.40	49.17	29.64	16.36
64KiB w/ 4 IOs/Stream	224.60	80.86	51.62	30.60	17.48
64KiB w/ 1 IO/Stream	158.90	74.22	49.31	29.91	17.31

## SPC-2 Large Database Query Average Data Rate per Stream Graph

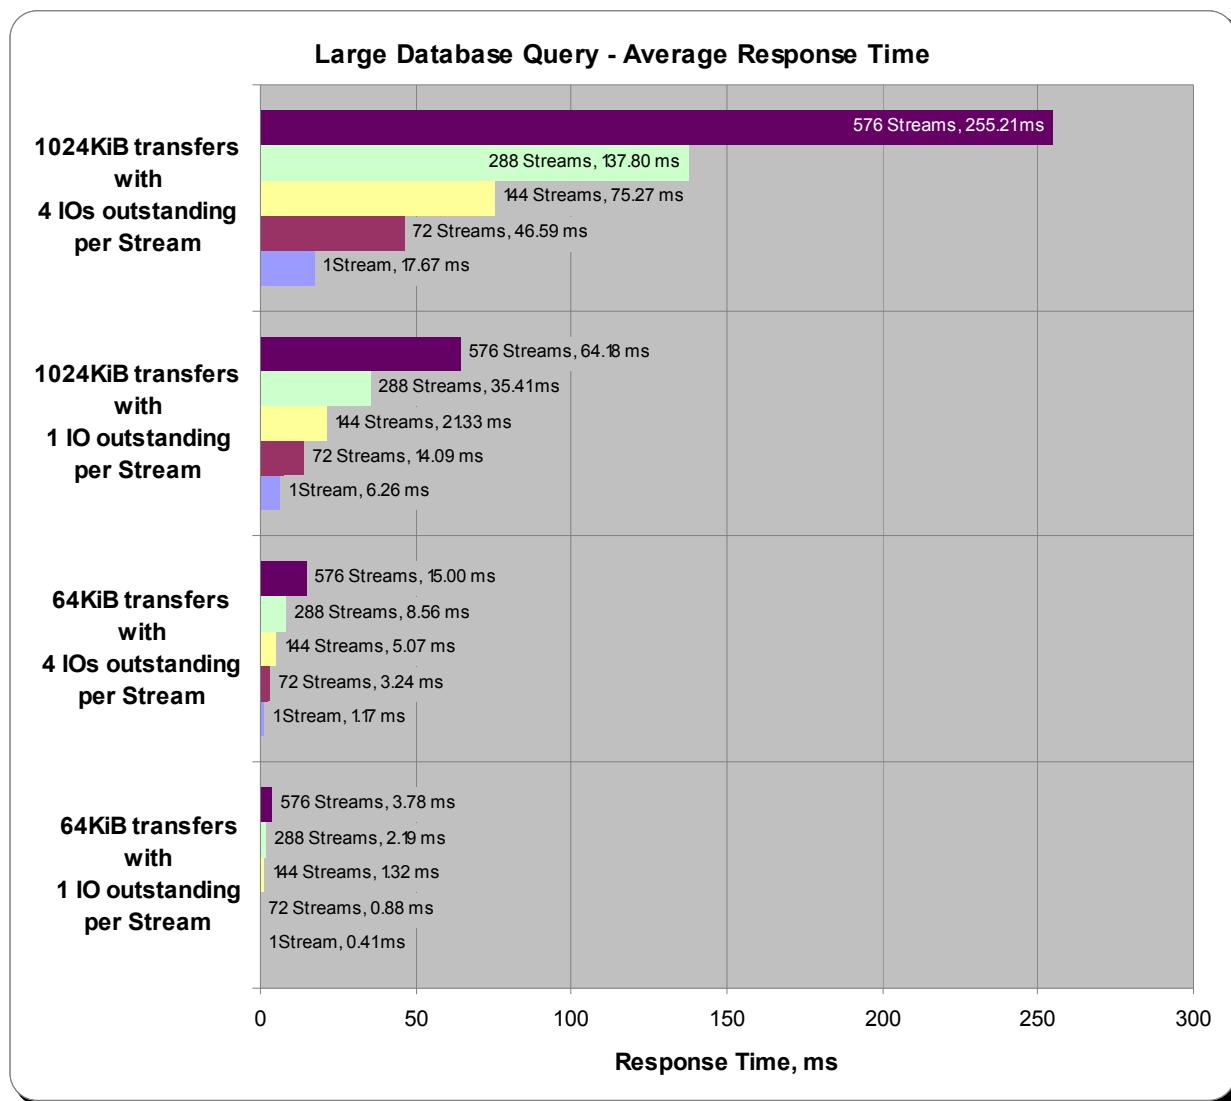

## SPC-2 Large Database Query Average Response Time

The average Response Time, in milliseconds, for each Test Run in the two Test Phases of the SPC-2 Large Database Query Test is listed in the table below as well as illustrated in the following graph.

Test Run Sequence	1 Stream	72 Streams	144 Streams	288 Streams	576 Streams
1024KiB w/ 4 IOs/Stream	17.67	46.59	75.27	137.80	255.21
1024KiB w/ 1 IO/Stream	6.26	14.09	21.33	35.41	64.18
64KiB w/ 4 IOs/Stream	1.17	3.24	5.07	8.56	15.00
64KiB w/ 1 IO/Stream	0.41	0.88	1.32	2.19	3.78

## SPC-2 Large Database Query Average Response Time Graph

## Large Database Query Test – 1024 KiB TRANSFER SIZE Test Phase

### Clause 10.6.8.2.1

1. A table that will contain the following information for each "1024 KiB Transfer Size, 4 Outstanding I/Os" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
2. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "1024 KiB Transfer Size, 4 Outstanding I/Os" Test Runs as specified in Clauses 10.1.4 – 10.1.6.
3. A table that will contain the following information for each "1024 KiB Transfer Size, 1 Outstanding I/O" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
4. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "1024 KiB Transfer Size, 1 Outstanding I/O" Test Runs as specified in Clauses 10.1.4 – 10.1.6.

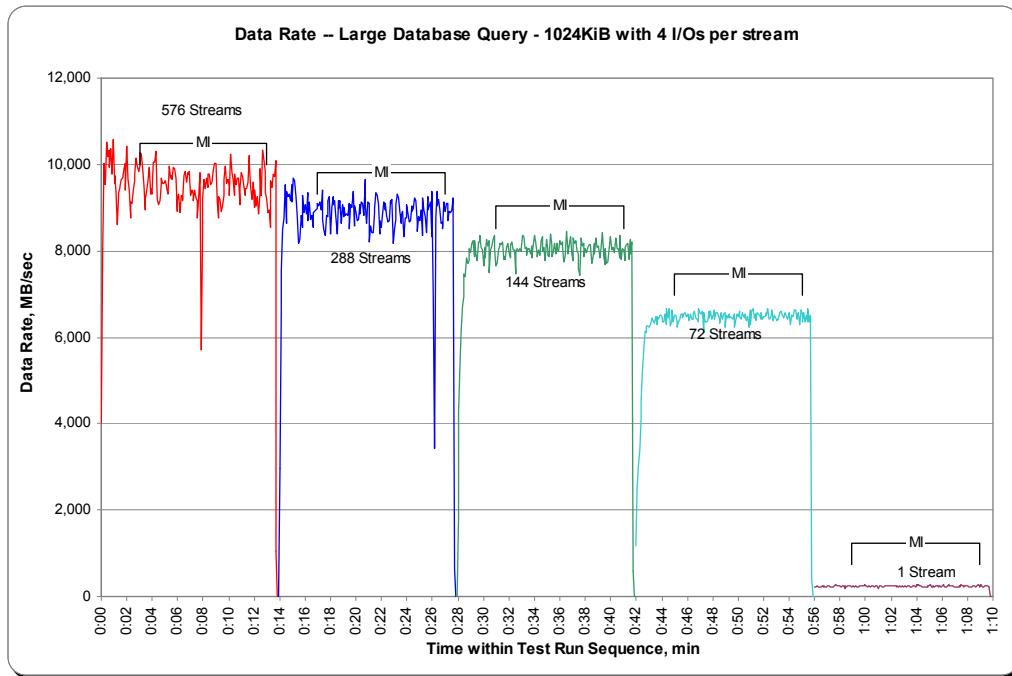

The SPC-2 "Large DatabaseQuery/1024 KiB TRANSFER SIZE/4 Outstanding I/Os" and "Large DatabaseQuery/1024 KiB TRANSFER SIZE/1 Outstanding I/O" data tables are not embedded in this document due to size. The tables are available via the URLs listed below:

### **Large DatabaseQuery/1024 KiB TRANSFER SIZE/4 Outstanding I/Os**

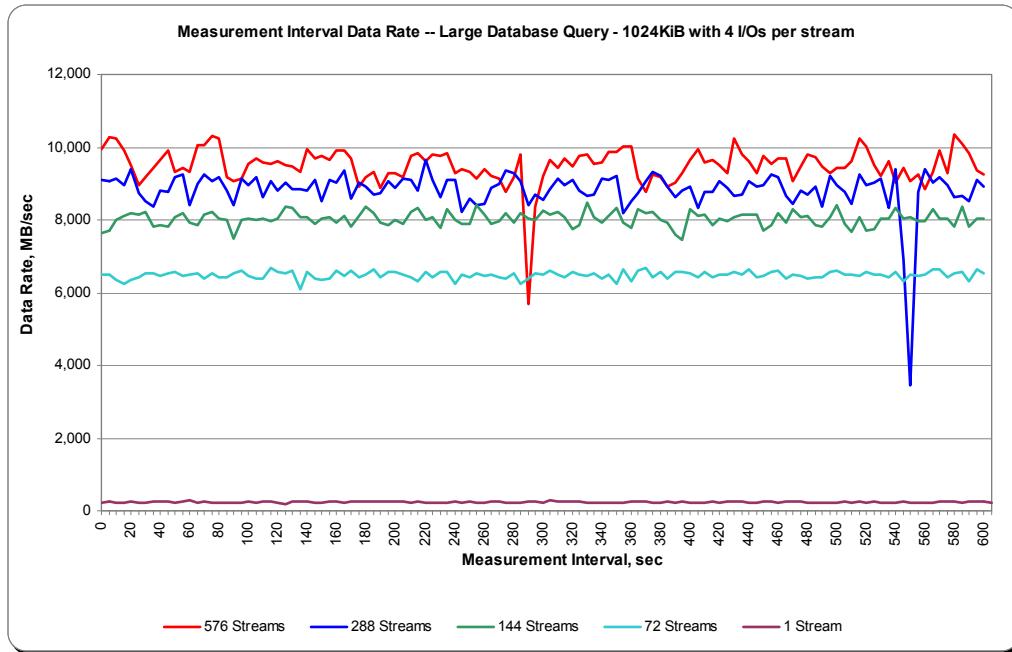

### **Large DatabaseQuery/1024 KiB TRANSFER SIZE/1 Outstanding I/O**

The corresponding graphs to illustrate the average Data Rate, average Data Rate per Stream, and average Response Time produced by each of the Test Runs appear on next four pages.

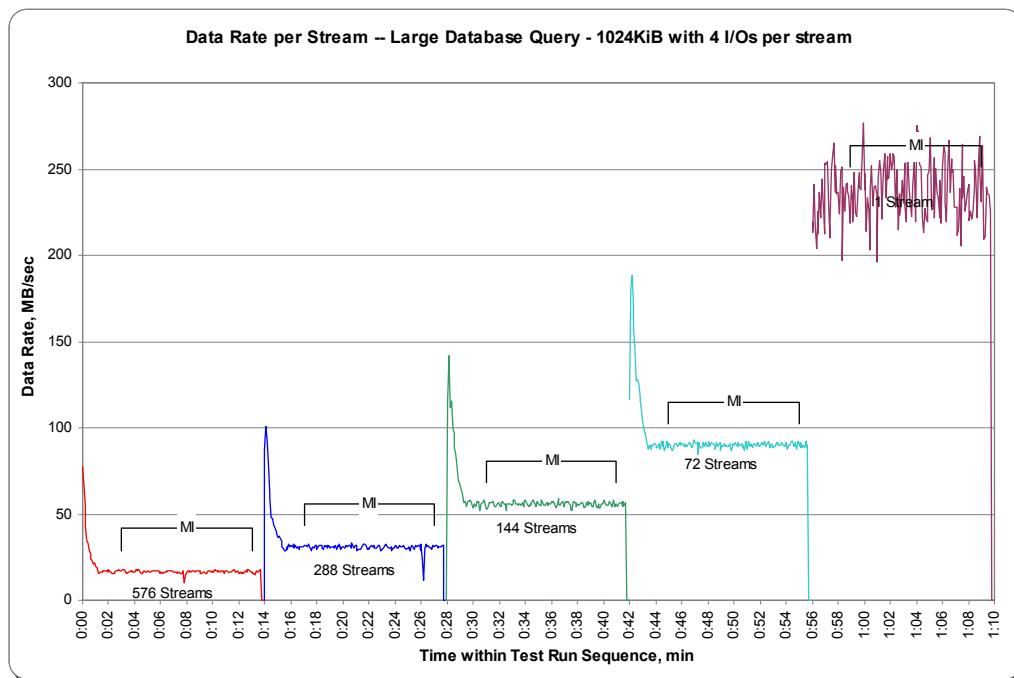

**SPC-2 “Large Database Query/1024 KiB Transfer Size/4 Outstanding I/Os”  
Average Data Rate Graph – Complete Test Run**

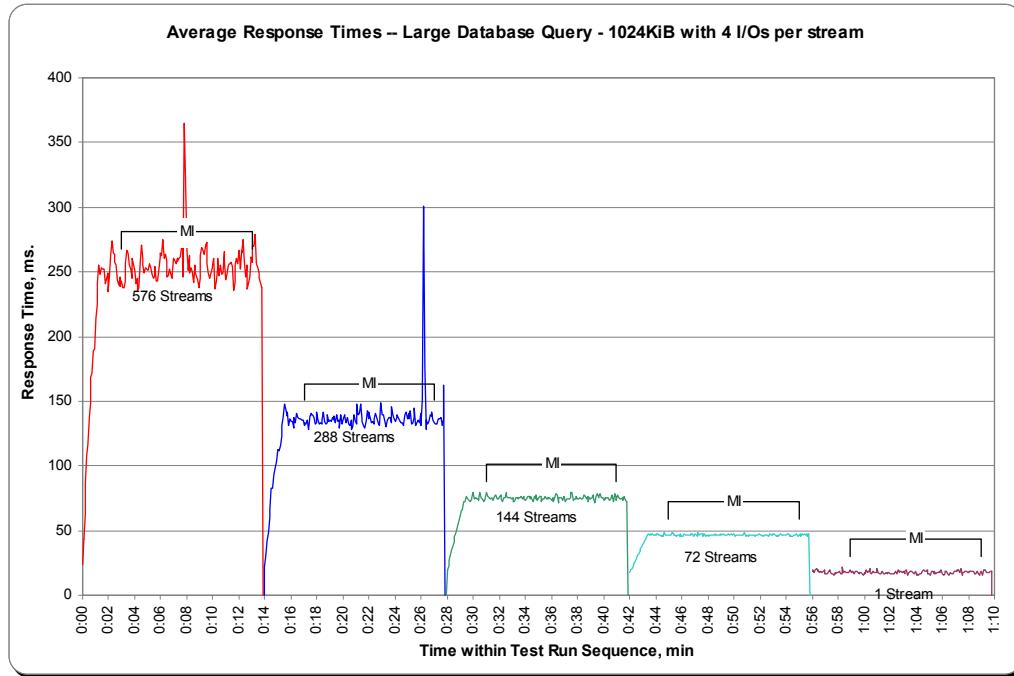

**SPC-2 “Large Database Query/1024 KiB Transfer Size/4 Outstanding I/Os”  
Average Data Rate Graph – Measurement Interval (MI) Only**

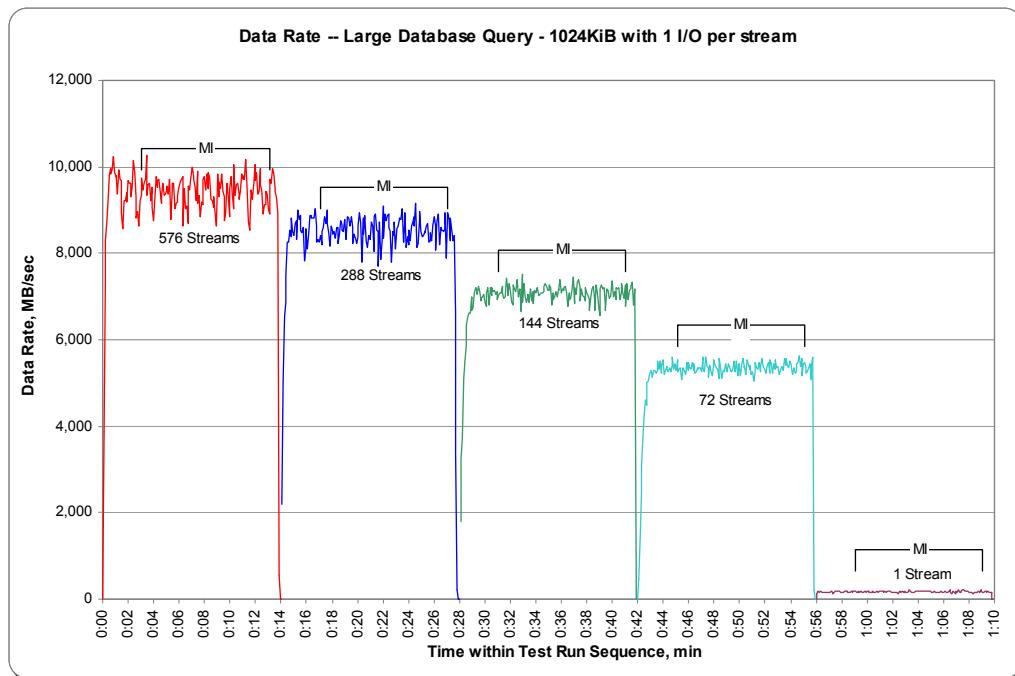

**SPC-2 “Large Database Query/1024 KiB Transfer Size/4 Outstanding I/Os”  
Average Data Rate per Stream Graph**

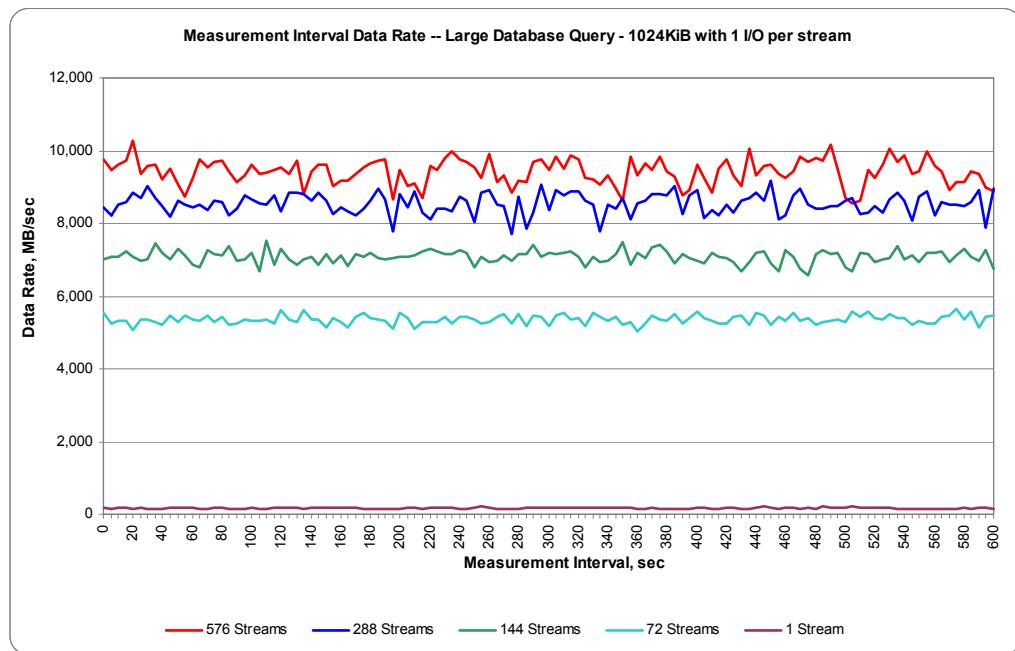

**SPC-2 “Large Database Query/1024 KiB Transfer Size/4 Outstanding I/Os”  
Average Response Time Graph**

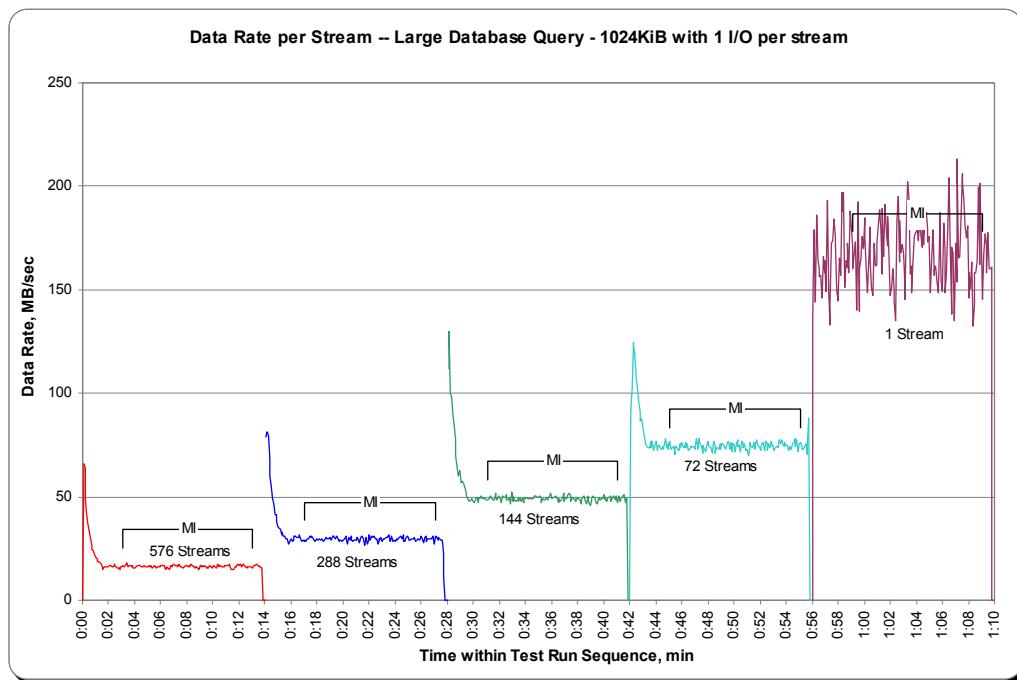

**SPC-2 “Large Database Query/1024 KiB Transfer Size/1 Outstanding I/O” Average Data Rate Graph – Complete Test Run**

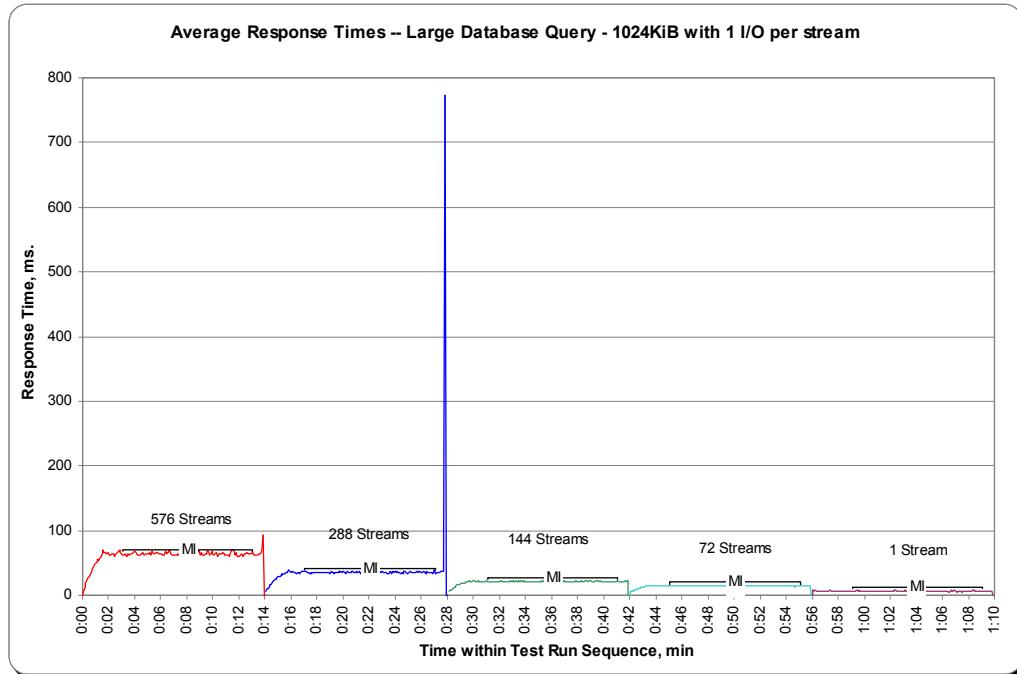

**SPC-2 “Large Database Query/1024 KiB Transfer Size/1 Outstanding I/O” Average Data Rate Graph – Measurement Interval (MI) Only**

**SPC-2 “Large Database Query/1024 KiB Transfer Size/1 Outstanding I/O” Average Data Rate per Stream Graph**

**SPC-2 “Large Database Query/1024 KiB Transfer Size/1 Outstanding I/O” Average Response Time Graph**

## Large Database Query Test – 64 KiB TRANSFER SIZE Test Phase

### Clause 10.6.8.2.1

5. A table that will contain the following information for each "64 KiB Transfer Size, 4 Outstanding I/Os" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
6. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "64 KiB Transfer Size, 4 Outstanding I/Os" Test Runs as specified in Clauses 10.1.4 – 10.1.6.
7. A table that will contain the following information for each "64 KiB Transfer Size, 1 Outstanding I/O" Test Run:
  - The number of Streams specified.
  - The average data rate, average data rate per stream, and average Response Time reported at five second intervals.
8. Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the "64 KiB Transfer Size, 1 Outstanding I/O" Test Runs as specified in Clauses 10.1.4 – 10.1.6.

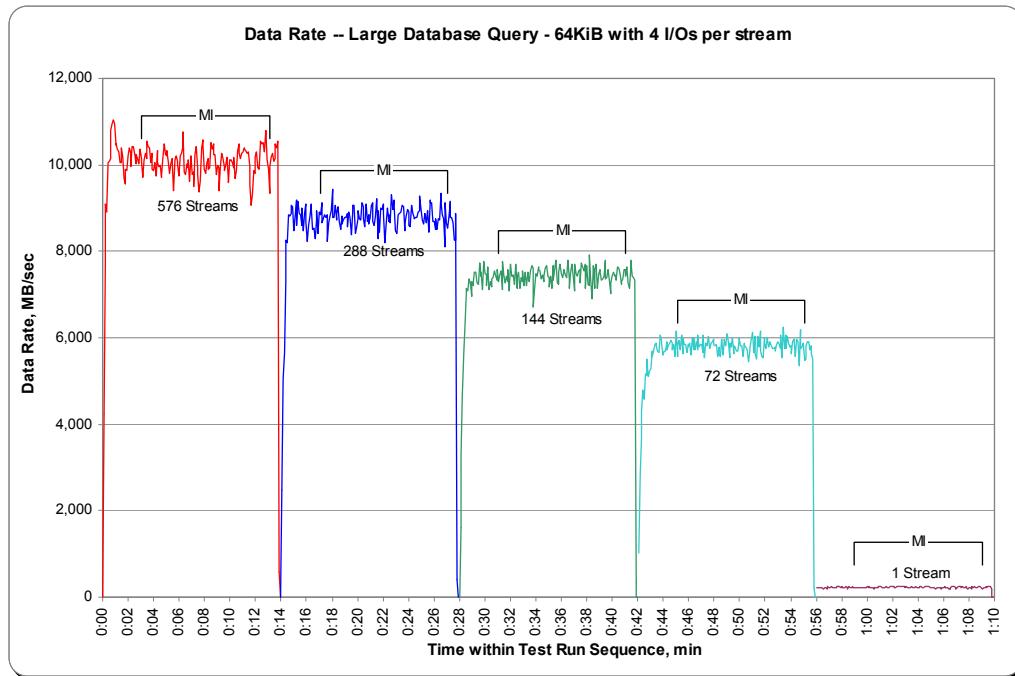

The SPC-2 "Large DatabaseQuery/64 KiB TRANSFER SIZE/4 Outstanding I/Os" and "Large DatabaseQuery/64 KiB TRANSFER SIZE/1 Outstanding I/O" data tables are not embedded in this document due to size. The tables are available via the URLs listed below:

### **Large DatabaseQuery/64 KiB TRANSFER SIZE/4 Outstanding I/Os**

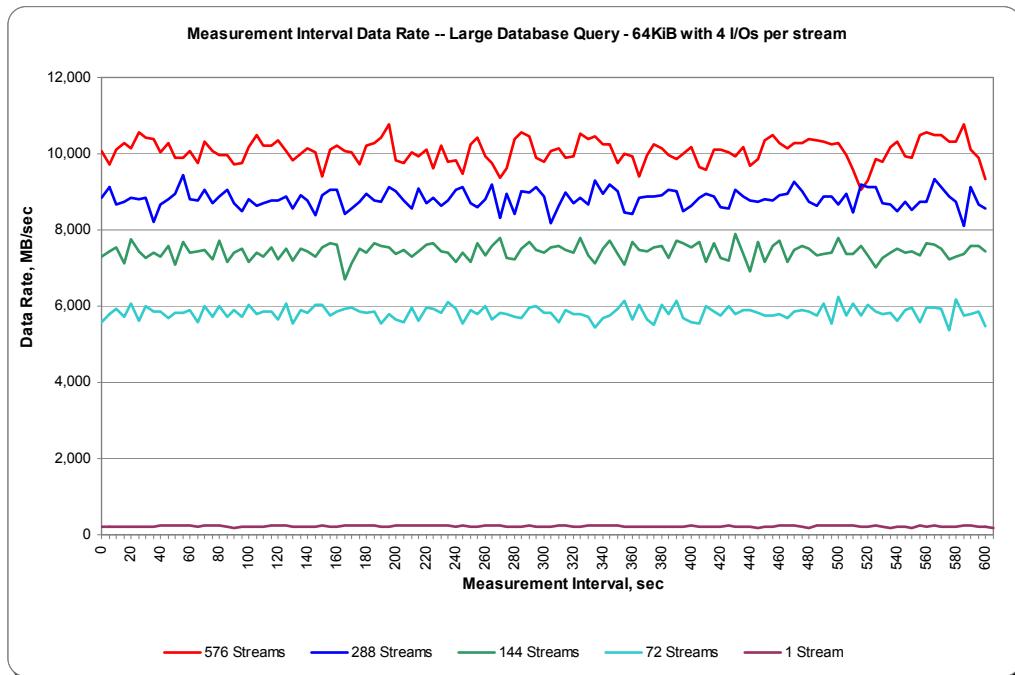

### **Large DatabaseQuery/64 KiB TRANSFER SIZE/1 Outstanding I/O**

The corresponding graphs to illustrate the average Data Rate, average Data Rate per Stream, and average Response Time produced by each of the Test Runs appear on next four pages.

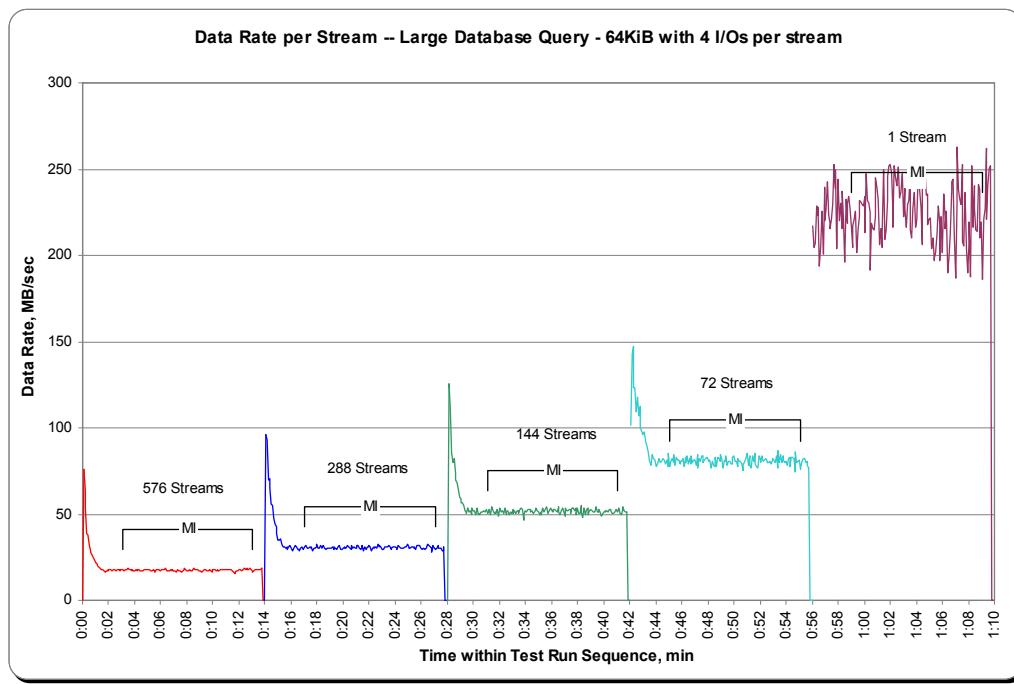

**SPC-2 “Large Database Query/64 KiB Transfer Size/4 Outstanding I/Os” Average Data Rate Graph – Complete Test Run**

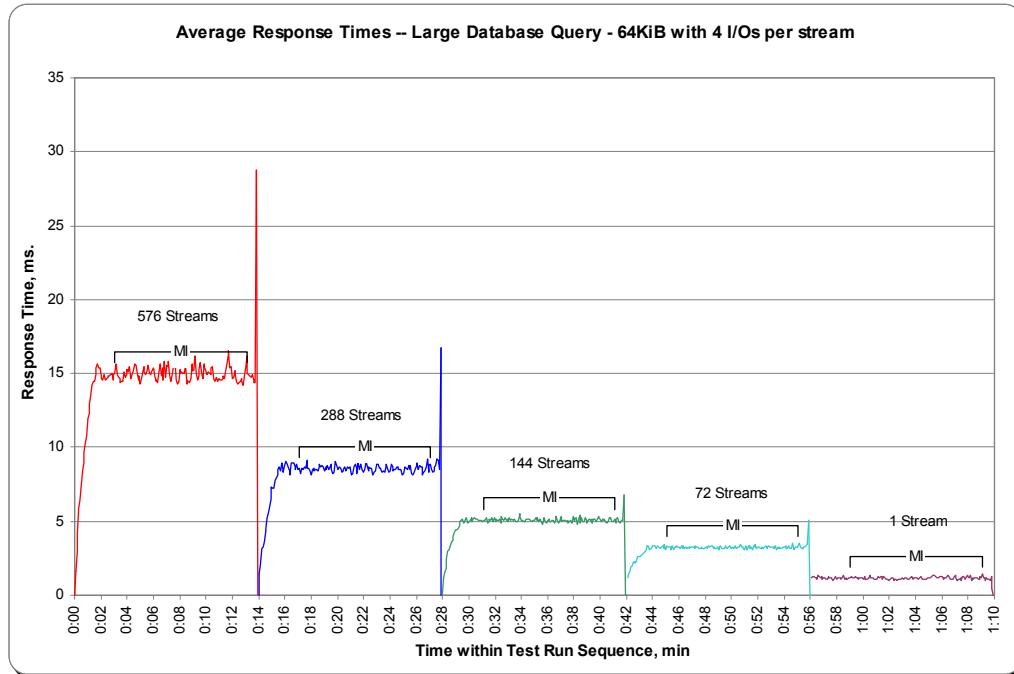

**SPC-2 “Large Database Query/64 KiB Transfer Size/4 Outstanding I/Os” Average Data Rate Graph – Measurement Interval (MI) Only**

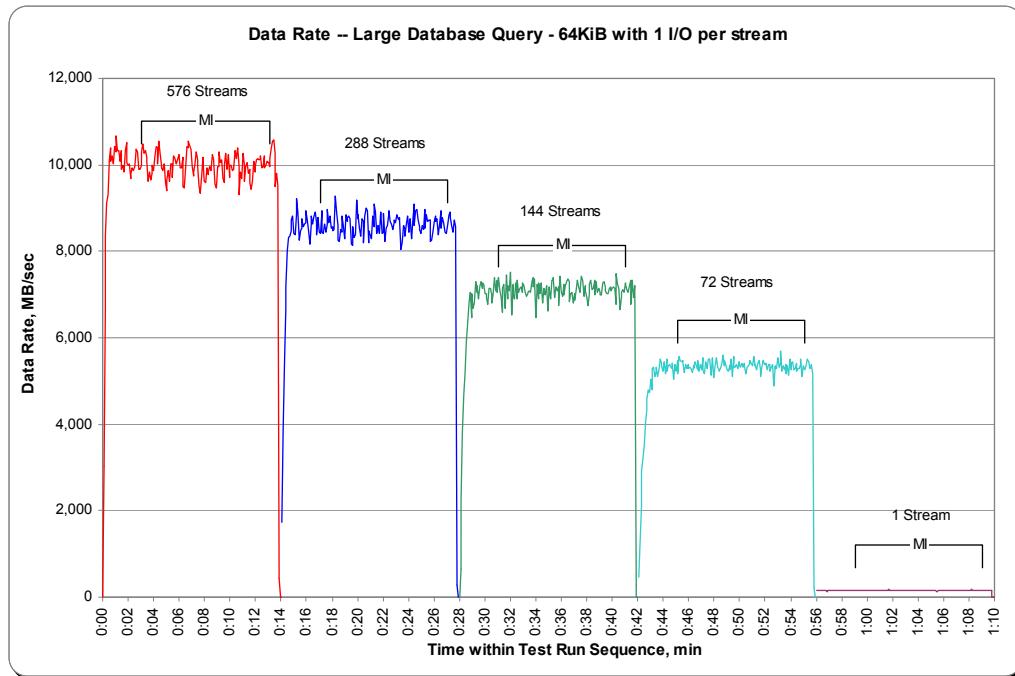

**SPC-2 “Large Database Query/64 KiB Transfer Size/4 Outstanding I/Os” Average Data Rate per Stream Graph**

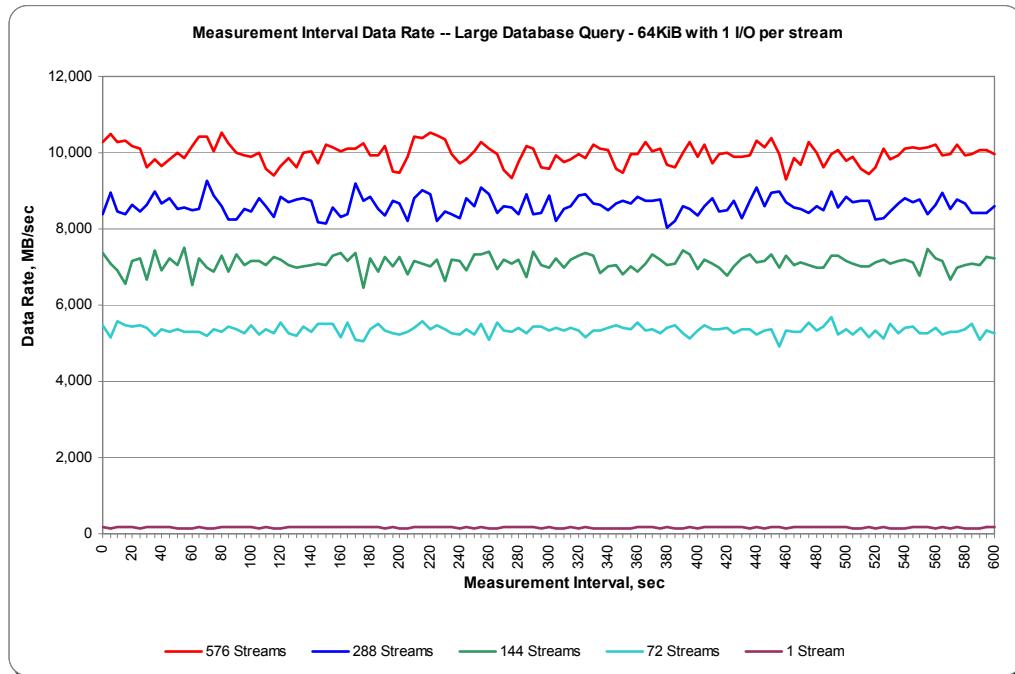

**SPC-2 “Large Database Query/64 KiB Transfer Size/4 Outstanding I/Os” Average Response Time Graph**

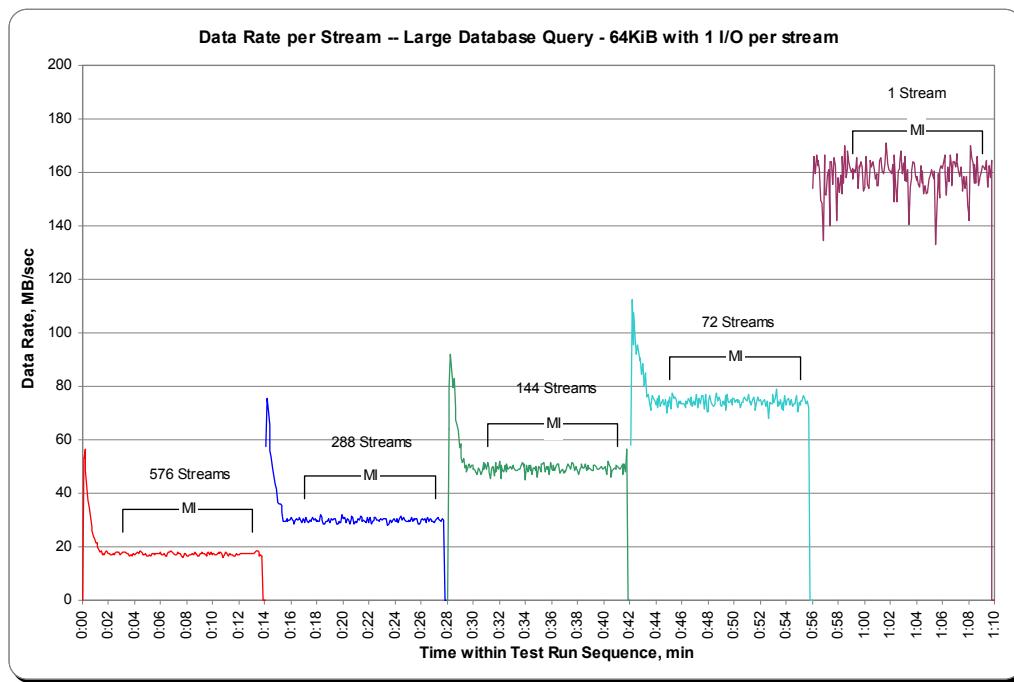

**SPC-2 “Large Database Query/64 KiB Transfer Size/1 Outstanding I/O” Average Data Rate Graph – Complete Test Run**

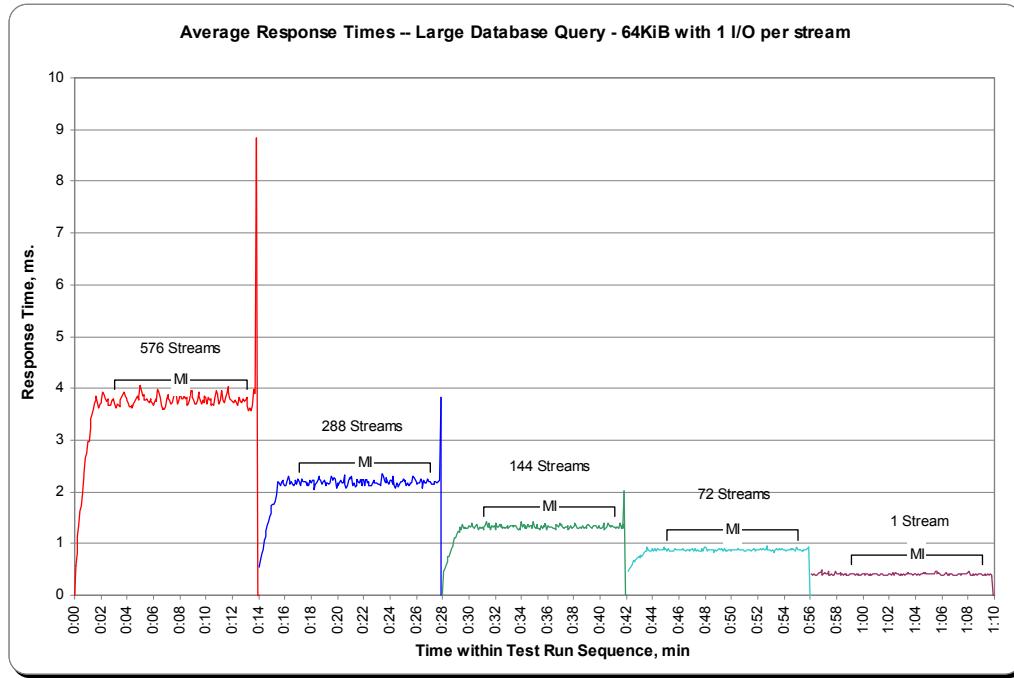

**SPC-2 “Large Database Query/64 KiB Transfer Size/1 Outstanding I/O” Average Data Rate Graph – Measurement Interval (MI) Only**

**SPC-2 “Large Database Query/64 KiB Transfer Size/1 Outstanding I/O” Average Data Rate per Stream Graph**

**SPC-2 “Large Database Query/64 KiB Transfer Size/1 Outstanding I/O” Average Response Time Graph**

## Video on Demand Delivery Test

### Clause 6.4.4.1

*The Video on Demand Delivery Test represents the I/O operations required to enable individualized video entertainment for a community of subscribers, which draw from a digital film library.*

### Clause 6.4.2.2

*The Video on Demand Delivery Test consists of one (1) Test Run.*

*The BC shall not be restarted or manually disturbed, altered, or adjusted during the execution of the Video on Demand Delivery Test. If power is lost to the BC during this Test all results shall be rendered invalid and the Test re-run in its entirety.*

### Clause 10.6.8.3

*The Full Disclosure Report will contain the following content for the Video on Demand Delivery Test:*

1. *A listing of the SPC-2 Workload Generator commands and parameters used to execute the Test Run in the Video on Demand Delivery Test.*
2. *The human readable SPC-2 Test Results File for the Test Run in the Video on Demand Delivery Test.*
3. *A table that contains the following information for the Test Run in the Video on Demand Delivery Test:*
  - *The number Streams specified.*
  - *The Ramp-Up duration in seconds.*
  - *The Measurement Interval duration in seconds.*
  - *The average data rate, in MB per second, for the Measurement Interval.*
  - *The average data rate, in MB per second, per Stream for the Measurement Interval.*
4. *A table that contains the following information for the single Video on Demand Delivery Test Run:*
  - *The number Streams specified.*
  - *The average data rate, average data rate per stream, average Response Time, and Maximum Response Time reported at 60 second intervals.*
5. *Average Data Rate (intervals), Average Data Rate per Stream (intervals), and Average Response Time (intervals) graphs for the single Video on Demand Delivery Test Run as specified in Clauses 10.1.4-2-10.1.6.*
6. *A Maximum Response Time (intervals) graph, which will utilize the format defined in Clause 10.1.6, substituting maximum Response Time data for average Response Time data.*

## SPC-2 Workload Generator Commands and Parameters

The SPC-2 Workload Generator commands and parameters for the Video on Demand Delivery Test Run are documented in “Appendix E: SPC-2 Workload Generator Execution Commands and Parameters” on Page 105.

## SPC-2 Test Results File

A link to the SPC-2 Test Results file generated from the Video on Demand Delivery Test Run is listed below.

### [SPC-2 Video on Demand Delivery Test Results File](#)

## SPC-2 Video on Demand Delivery Test Run Data

The number of Streams specified, Ramp-Up duration in seconds, Measurement Interval duration in seconds, average Data Rate for the Measurement Interval, and average Data Rate per Stream for the Measurement Interval are listed in the following table.

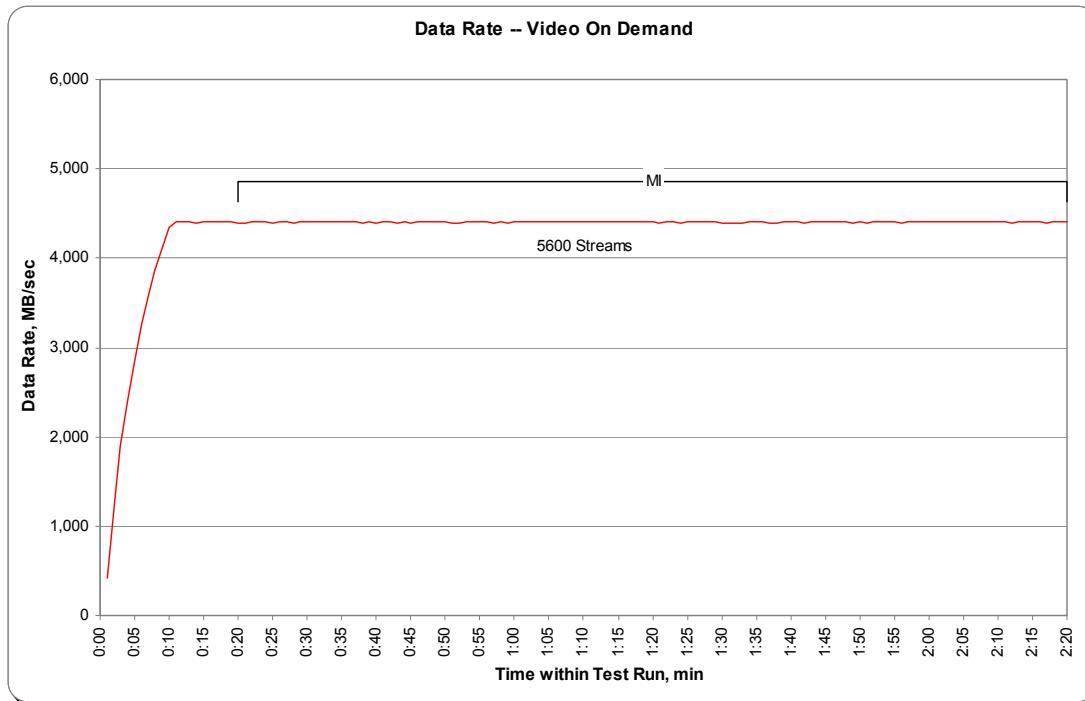

SPC-2-VOD	TR1
Number of Streams	5600
Ramp-up Time, sec	1200
Measurement Interval, sec	7200
Average Data Rate, MB/sec	4,404.00
Per Stream Data Rate, MB/sec	0.79
Average Response Time, ms	2.55
Average Max Response Time, ms	417.14

## Video on Demand Delivery Test – TEST RUN DATA BY INTERVAL

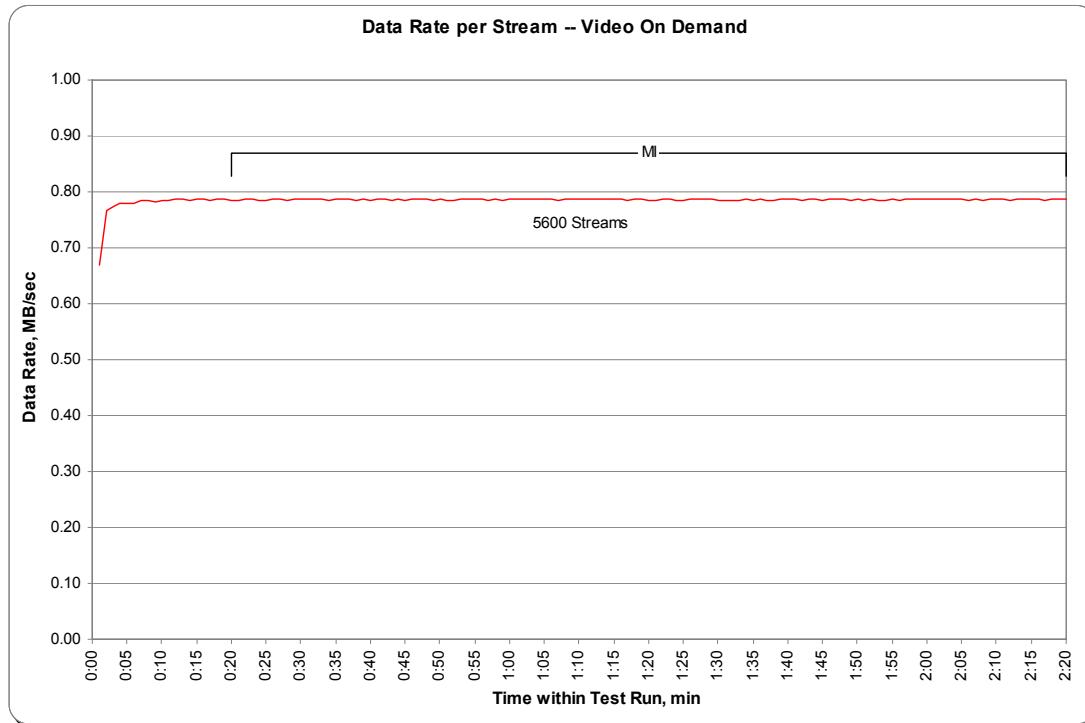

The SPC-2 Video on Demand Delivery Test Run data is contained in the table that appears on the next page. That table is followed by graphs illustrating the average Data Rate and average Data Rate per Stream produced by the same Test Runs. The table and graphs present the data at sixty second intervals.

TR1				5600 Streams				TR1				5600 Streams				TR1				5600 Streams									
Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms	Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms	Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms	Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms	Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms	Test Run Sequence	Time	Data Rate / Stream, MB/sec	Response Time, ms

## Data Persistence Test

### Clause 6

The Data Persistence Test demonstrates the Tested Storage Configuration (TSC):

- Is capable of maintaining data integrity across a power cycle.
- Ensures the transfer of data between Logical Volumes and host systems occurs without corruption or loss.

The SPC-2 Workload Generator will write a specific pattern at randomly selected locations throughout the Total ASU Capacity (Persistence Test Run 1). The SPC-2 Workload Generator will retain the information necessary to later validate the pattern written at each location.

The Tested Storage Configuration will be shutdown and restarted using a power off/power on cycle at the end of the above sequence of write operations. In addition, any caches employing battery backup must be flushed/emptied.

Restart the TSC, and if the Host System(s) were shutdown and powered off, restart the Host System(s).

The SPC-2 Workload Generator will utilize the retained data from Persistence Test Run 1 to verify (Persistence Run 2) the bit patterns written in Persistence Test Run 1 and their corresponding location.

### Clause 10.6.8.4

The Full Disclosure Report will contain the following content for the Data Persistence Test:

1. A listing of the SPC-2 Workload Generator commands and parameters used to execute each of the Test Runs in the Persistence Test.
2. The human readable SPC-2 Test Results File for each of the Test Runs in the Data Persistence Test.
3. A table from the successful Persistence Test, which contains the results from the test.

## SPC-2 Workload Generator Commands and Parameters

The SPC-2 Workload Generator commands and parameters for the Persistence Test Runs are documented in “Appendix E: SPC-2 Workload Generator Execution Commands and Parameters” on Page 105.

## Data Persistence Test Results File

A link to the test result file generated from each Data Persistence Test Run is listed below.

[Persistence 1 Test Run Results File](#)

[Persistence 2 Test Run Results File](#)

## Data Persistence Test Results

Data Persistence Test Results	
Data Persistence Test Number: 1	
Total Number of Logical Blocks Written	2,945,331
Total Number of Logical Blocks Re-referenced	29,938
Total Number of Logical Blocks Verified	2,945,331
Total Number of Logical Blocks that Failed Verification	0
Number of Failed I/O Requests in the process of the Test	0

## **PRICED STORAGE CONFIGURATION AVAILABILITY DATE**

### **Clause 10.6.9**

*The committed delivery date for general availability (Availability Date) of all products that comprise the Priced Storage Configuration must be reported. When the Priced Storage Configuration includes products or components with different availability dates, the reported Availability Date must be the date at which all components are committed to be available. All availability dates, whether for individual components or for the Priced Storage Configuration as a whole, must be disclosed to a precision of one day.*

*The FDR shall state: "The **Priced Storage Configuration**, as documented in this Full Disclosure Report will be available for shipment to customers on MMMM DD, YYYY." Where **Priced Storage Configuration** is the Priced Storage Configuration Name as described in Clause 10.6.5.3, #1 and MM is month, DD is the day, and YY is the year of the date that the Priced Storage Configuration, as documented, is available for shipment to customers as described above.*

The IBM XIV® Storage System Gen3, as documented in this SPC-2 Full Disclosure Report, will become available on October 31, 2011 for customer purchase and shipment.

## **ANOMALIES OR IRREGULARITIES**

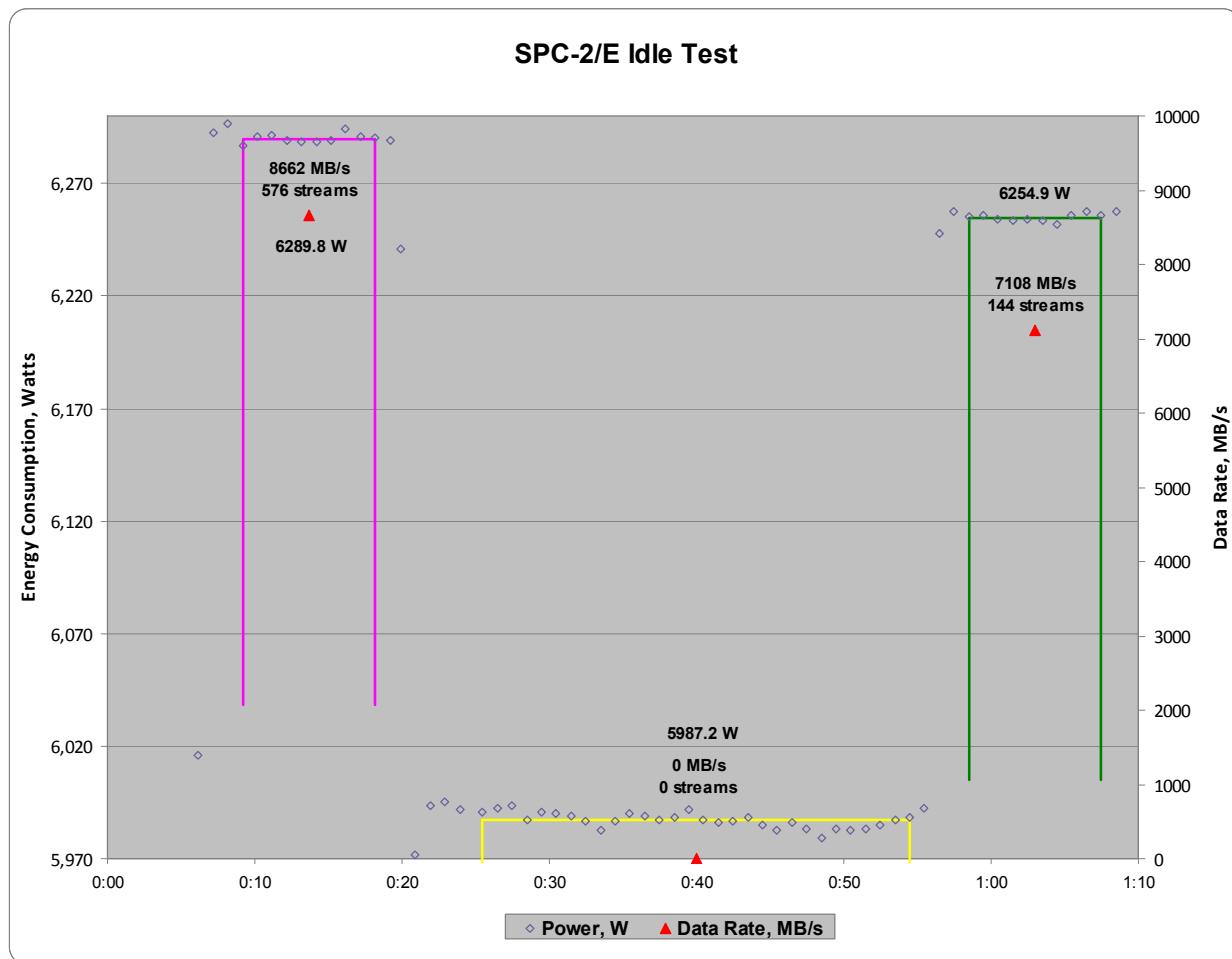

### **Clause 10.6.11**

*The FDR shall include a clear and complete description of any anomalies or irregularities encountered in the course of executing the SPC-2 benchmark that may in any way call into question the accuracy, verifiability, or authenticity of information published in this FDR.*

There were no anomalies or irregularities encountered during the SPC-2 Onsite Audit of the IBM XIV® Storage System Gen3.

## SPC-2/E REPORTED DATA AND CHARTS

### SPC-2/E Idle Test Chart and Data Table

Test Run	Average Power (Watts)	Data Rate (MB/s)
Pre Idle - 576 streams, Read/Write	6,289.8	8,662
Idle - 0 streams,	5,987.2	0
Post Idle - 144 streams, Read/Write	6,254.9	7,108

## SPC-2/E Large File Processing (LFP) Reported Data

### Power Environment

Average RMS Voltage: 209.83 Average Power Factor: 0.978

	Usage Profile			Nominal			Heat BTU/hr
	Hours of Use per Day	Power watts	Traffic MBPS	Ratio MBPS/w			
Low Daily Usage:	Heavy 0	Moderate 8	Idle 16	6068.44	2426.97	0.40	20,706.12
Medium Daily Usage:	Heavy 4	Moderate 14	Idle 6	6177.86	5690.73	0.92	21,079.46
High Daily Usage:	Heavy 18	Moderate 6	Idle 0	6266.34	8316.11	1.33	21,381.36
Composite Metrics:			6,170.88	5,477.94	0.89		
Annual Energy Use, kWh:	54,056.88			Energy Cost, \$/kWh:	\$ 0.12	Annual Energy Cost, \$:	\$ 6,486.83

**HEAVY** SPC-2 LFP Workload: 6,278.14W at a data rate of 8,661.17 MB/s.

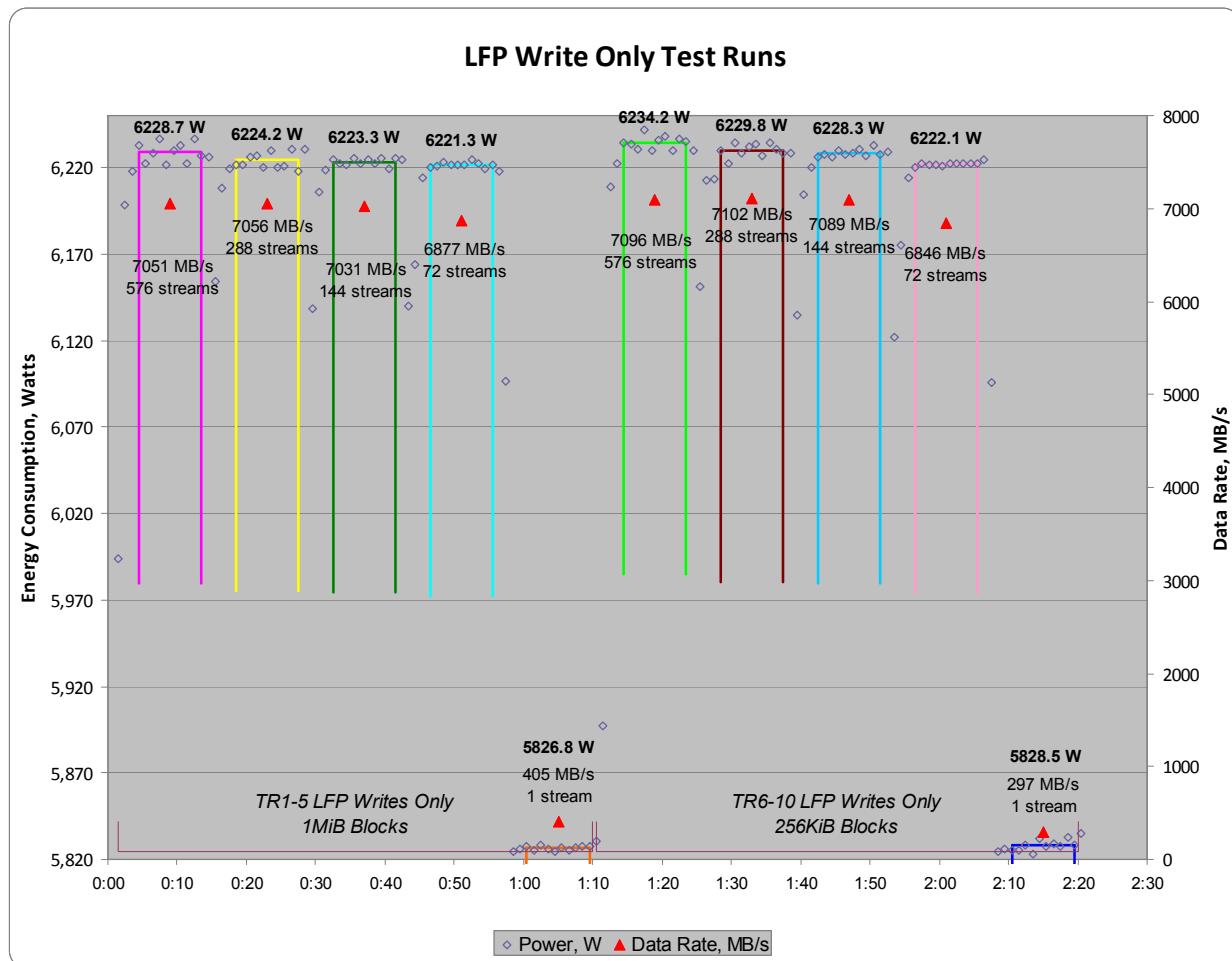

**MODERATE** SPC-2 LFP Workload: 6,230.91W at a data rate of 7,280.92 MB/s

**IDLE** SPC-2 LFP Workload: 5,987.20W at a data rate of zero (0).

The above usage profile describes conditions in environments that respectively impose light (**Low Daily Usage**), moderate (**Medium Daily Usage**), and extensive (**High Daily Usage**) demands on the Tested Storage Configuration (TSC) while executing only the SPC-2 Large File Processing (LFP) workload.

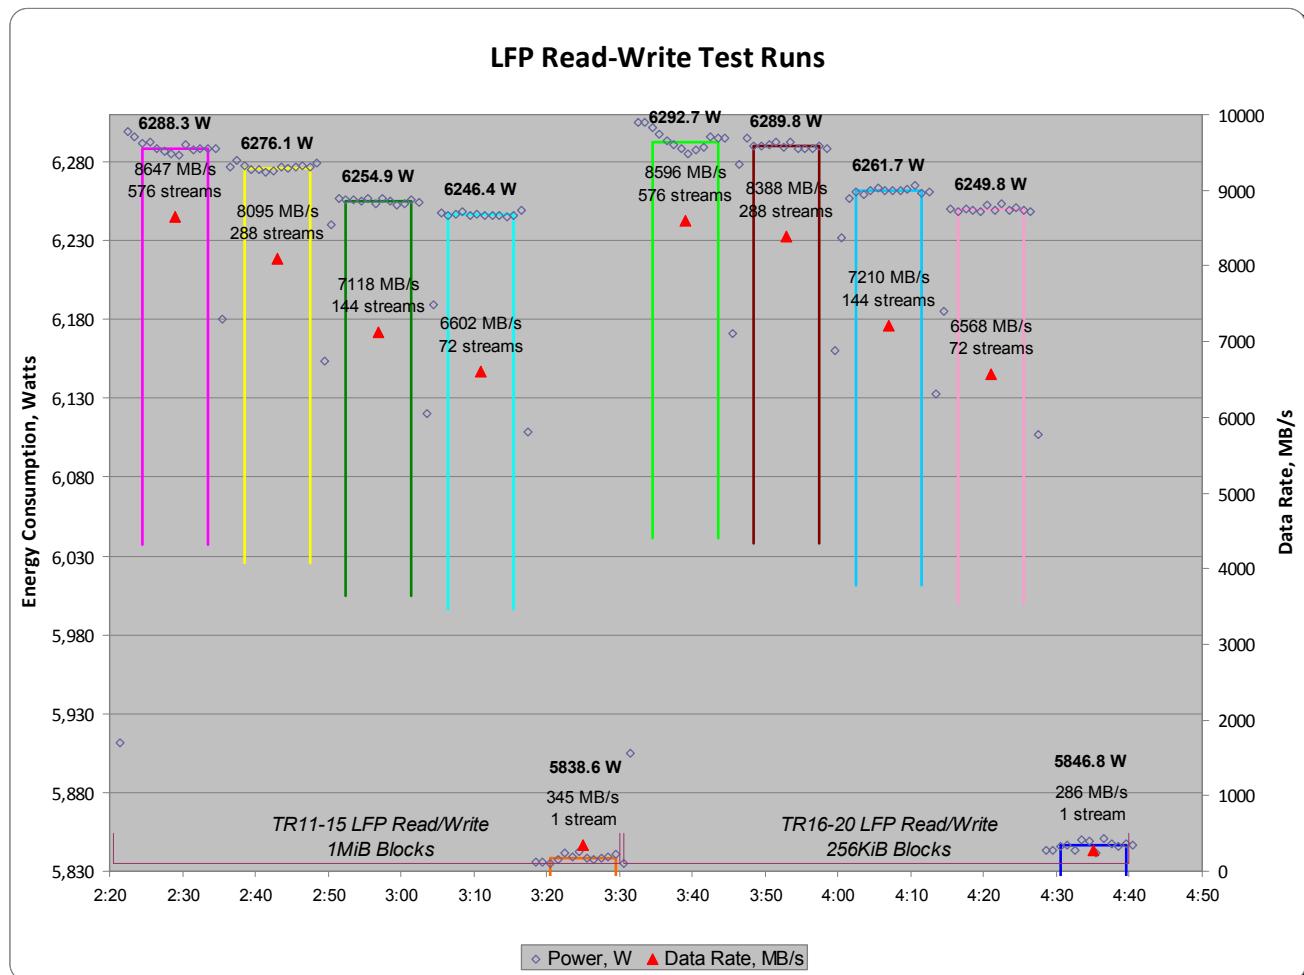

The definitions for the remaining items in the above LFP SPC-2/E Reported Data table are available on at the following location in the Executive Summary portion of this document: [reported data definitions](#).

## SPC-2/E Large File Processing (LFP) WRITE ONLY Chart and Data Table

Energy Cost, \$/kWh:	\$ 0.12	Annual Energy Cost, \$:	\$ 6,351.53

**HEAVY** SPC-2 VOD Workload: 6,066.36W at a data rate of 4,617.93 MB/s.

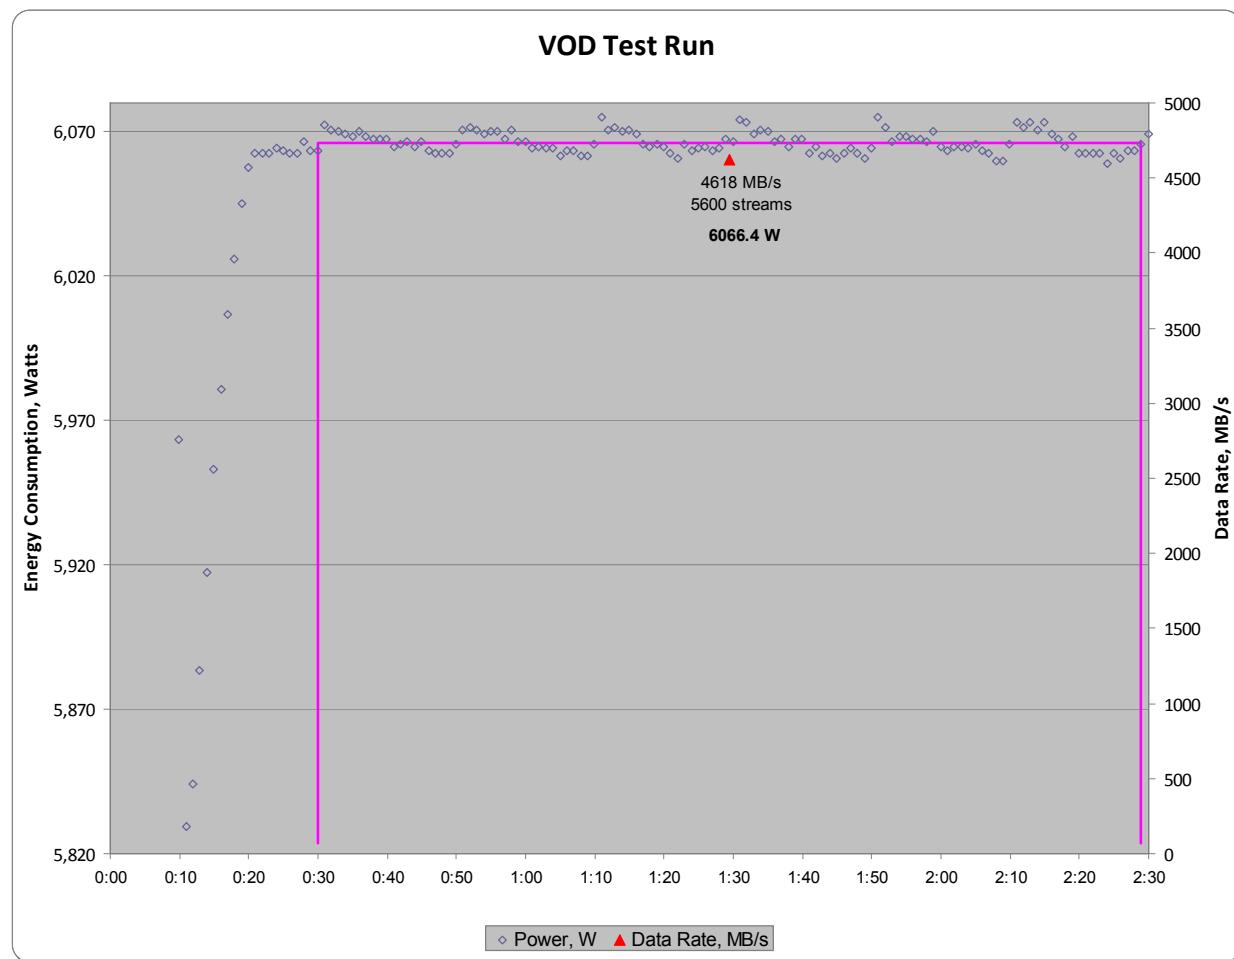

**MODERATE** SPC-2 VOD Workload: 6,066.36W at a data rate of 4,617.93 MB/s

**IDLE** SPC-2 VOD Workload: 5,987.20W at a data rate of zero (0).

The above usage profile describes conditions in environments that respectively impose light (**Low Daily Usage**), moderate (**Medium Daily Usage**), and extensive (**High Daily Usage**) demands on the Tested Storage Configuration (TSC) while executing only the SPC-2 Video on Demand Delivery (VOD) workload.

The definitions for the remaining items in the above VOD SPC-2/E Reported Data table are available on at the following location in the Executive Summary portion of this document: [reported data definitions](#).

## SPC-2/E Video on Demand Delivery (VOD) Chart and Data Table

Test Run (TR)	Average Power	Data Rate
	(Watts)	(MB/s)
TR1 - 5600 streams,	6,066.4	4,618

## **APPENDIX A: SPC-2 GLOSSARY**

### **“Decimal” (*powers of ten*) Measurement Units**

In the storage industry, the terms “kilo”, “mega”, “giga”, “tera”, “peta”, and “exa” are commonly used prefixes for computing performance and capacity. For the purposes of the SPC workload definitions, all of the following terms are defined in “powers of ten” measurement units.

- A kilobyte (KB) is equal to 1,000 ( $10^3$ ) bytes.
- A megabyte (MB) is equal to 1,000,000 ( $10^6$ ) bytes.
- A gigabyte (GB) is equal to 1,000,000,000 ( $10^9$ ) bytes.
- A terabyte (TB) is equal to 1,000,000,000,000 ( $10^{12}$ ) bytes.
- A petabyte (PB) is equal to 1,000,000,000,000,000 ( $10^{15}$ ) bytes
- An exabyte (EB) is equal to 1,000,000,000,000,000,000 ( $10^{18}$ ) bytes

### **“Binary” (*powers of two*) Measurement Units**

The sizes reported by many operating system components use “powers of two” measurement units rather than “power of ten” units. The following standardized definitions and terms are also valid and may be used in this document.

- A kibibyte (KiB) is equal to 1,024 ( $2^{10}$ ) bytes.
- A mebibyte (MiB) is equal to 1,048,576 ( $2^{20}$ ) bytes.
- A gibibyte (GiB) is equal to 1,073,741,824 ( $2^{30}$ ) bytes.
- A tebibyte (TiB) is equal to 1,099,511,627,776 ( $2^{40}$ ) bytes.
- A pebibyte (PiB) is equal to 1,125,899,906,842,624 ( $2^{50}$ ) bytes.
- An exbibyte (EiB) is equal to 1,152,921,504,606,846,967 ( $2^{60}$ ) bytes.

## **SPC-2 Data Repository Definitions**

**Total ASU Capacity:** The total storage capacity read and written in the course of executing the SPC-2 benchmark.

**Application Storage Unit (ASU):** The logical interface between the storage and SPC-2 Workload Generator. The ASU is implemented on one or more Logical Volume.

**Logical Volume:** The division of Addressable Storage Capacity into individually addressable logical units of storage used in the SPC-2 benchmark. Each Logical Volume is implemented as a single, contiguous address space.

**Addressable Storage Capacity:** The total storage (sum of Logical Volumes) that can be read and written by application programs such as the SPC-2 Workload Generator.

**Configured Storage Capacity:** This capacity includes the Addressable Storage Capacity and any other storage (parity disks, hot spares, etc.) necessary to implement the Addressable Storage Capacity.

**Physical Storage Capacity:** The formatted capacity of all storage devices physically present in the Tested Storage Configuration (TSC).

**Data Protection Overhead:** The storage capacity required to implement the selected level of data protection.

**Required Storage:** The amount of Configured Storage Capacity required to implement the Addressable Storage Configuration, excluding the storage required for the ASU.

**Global Storage Overhead:** The amount of Physical Storage Capacity that is required for storage subsystem use and unavailable for use by application programs.

**Total Unused Storage:** The sum of unused storage capacity within the Physical Storage Capacity, Configured Storage Capacity, and Addressable Storage Capacity.

## SPC-2 Data Protection Levels

**RAID5:** User data is distributed across the disks in the array. Check data corresponding to user data is distributed across multiple disks in the form of bit-by-bit parity.

**Mirroring:** Two or more identical copies of user data are maintained on separate disks.

**Other Protection Level:** Any data protection other than **RAID5** or **Mirroring**.

**Unprotected:** There is no data protection provided.

## SPC-2 Test Execution Definitions

**Completed I/O Request:** An I/O Request with a Start Time and a Completion Time (*see “I/O Completion Types” illustrated below*).

**Completion Time:** The time recorded by the Workload Generator when an I/O Request is completed by the Tested Storage Configuration (TSC) as signaled by System Software.

**Data Rate:** The data volume, in MB, transferred by all Measured I/O Requests in an SPC-2 Test Run divided by the length of the Test Run in seconds.

**Failed I/O Request:** Any I/O Request issued by the SPC-2 Workload Generator that meets one of the following conditions (*see “I/O Completion Types” illustrated below*):

- The I/O Request was signaled as failed by System Software.
- The I/O Request started within the Measurement Interval, but did not complete prior to the end of the appropriate Run-Out period..
- The I/O Request started within the Run-Out period, but did not complete prior to the end of the appropriate Ramp-Down period.

**I/O Request Throughput:** The total number of Measured I/O Requests in an SPC-2 Test Run divided by the duration of the Measurement Interval in seconds.

**Measured I/O Request:** A Completed I/O Request that begins (Start Time) within a Measurement Interval and completes (Completion Time) prior to the end of the appropriate Ramp Down (*see “I/O Completion Types” illustrated below*).

**Measurement Interval:** A specified, contiguous period of time, after the TSC has reached Steady State, when data is collected by the Workload Generator to produce the test results for a SPC-2 Test Run (*see “SPC-2 Test Run Components” illustrated below, Test Run 1: T<sub>2</sub>-T<sub>3</sub> and Test Run 2: T<sub>7</sub>-T<sub>8</sub>*).

**Outstanding I/O Requests:** The Outstanding I/O Requests parameter specifies the maximum number of concurrent I/O Requests, associated with a give Stream, which have been issued but not yet completed. (*Clause 3.4.4 of the SPC-2 Benchmark Specification*).

**Ramp-Down:** A specified, contiguous period of time in which the TSC is required to complete I/O Requests started but not completed during the preceding Run-Out period. Ramp-Down begins at the end of the preceding Run-Out period (*see “SPC-2 Test Run Components” illustrated below, Test Run 1: T<sub>4</sub>-T<sub>5</sub> and Test Run 2: T<sub>9</sub>-T<sub>10</sub>*). The Workload Generator will not submit any I/O Requests during the Ramp-Down.

**Ramp-Up:** A specified, contiguous period of time required for the Benchmark Configuration (BC) to produce Steady State throughput after the Workload Generator begins submitting I/O Requests to the TSC for execution. The Ramp-Up period ends at the beginning of the Measurement Interval (*see “SPC-2 Test Run Components” illustrated below, Test Run 1: T<sub>0</sub>-T<sub>2</sub> and Test Run 2: T<sub>5</sub>-T<sub>7</sub>*).

**Response Time:** The Response Time of a Measured I/O Request is its Completion Time minus its Start Time.

**Run-Out:** A specified, contiguous period of time in which the TSC is required to complete I/O Requests started but not completed during the preceding Measurement Interval. The Run-Out period begins at the end of the preceding Measurement Interval and is a component of the Steady State period (*see “SPC-2 Test Run Components” illustrated below, Test Run 1: T<sub>3</sub>-T<sub>4</sub> and Test Run 2: T<sub>9</sub>-T<sub>10</sub>*). The Workload Generator will continue to submit I/O Requests at the Test Run’s specified rate during the Run-Out period.

**Start Time:** The time recorded by the Workload Generator when an I/O Request is submitted, by the Workload Generator, to the System Software for execution on the TSC.

**Steady State:** The period during which the workload presented to the TSC by the SPC-2 Workload Generator is constant and the resulting TSC I/O Request Throughput is both consistent and sustainable. The Steady State period includes both the Measurement Interval and Run-Out periods (*see “SPC-2 Test Run Components” illustrated below, Test Run 1: T<sub>1</sub>-T<sub>4</sub> and Test Run 2: T<sub>6</sub>-T<sub>9</sub>*).

Steady State is achieved only after caches in the TSC have filled and as a result the I/O Request Throughput of the TSC has stabilized.

**Stream:** A collection of Stream Segments that started within a Test Run.

**Stream Segment:** A sequentially organized pattern of I/O requests, which transfers a contiguous range of data.

**Test:** A collection of Test Phases and or Test Runs sharing a common objective.

**Test Phase:** A collection of one or more SPC-2 Test Runs sharing a common objective and intended to be run in a specific sequence.

**Test Run:** The execution of SPC-2 that produces specific SPC-2 test results. SPC-2 Test Runs have specified, measured Ramp-Up, Measurement Interval, Run-Out and Ramp-Down periods. “SPC-2 Test Run Components” (*see below*) illustrates the Ramp-Up, Steady State, Measurement Interval, Run-Out, and Ramp-Down components contained in two uninterrupted SPC-2 Test Runs (*Test Run 1: T<sub>0</sub>-T<sub>5</sub> and Test Run 2: T<sub>5</sub>-T<sub>10</sub>*).

**Test Run Sequence:** A related sequence of Large File Processing (LFP) or Large Database Query (LDQ) Test Runs. Each Test Run Sequence will consist of five Test Runs, which vary the number of Streams as follows:

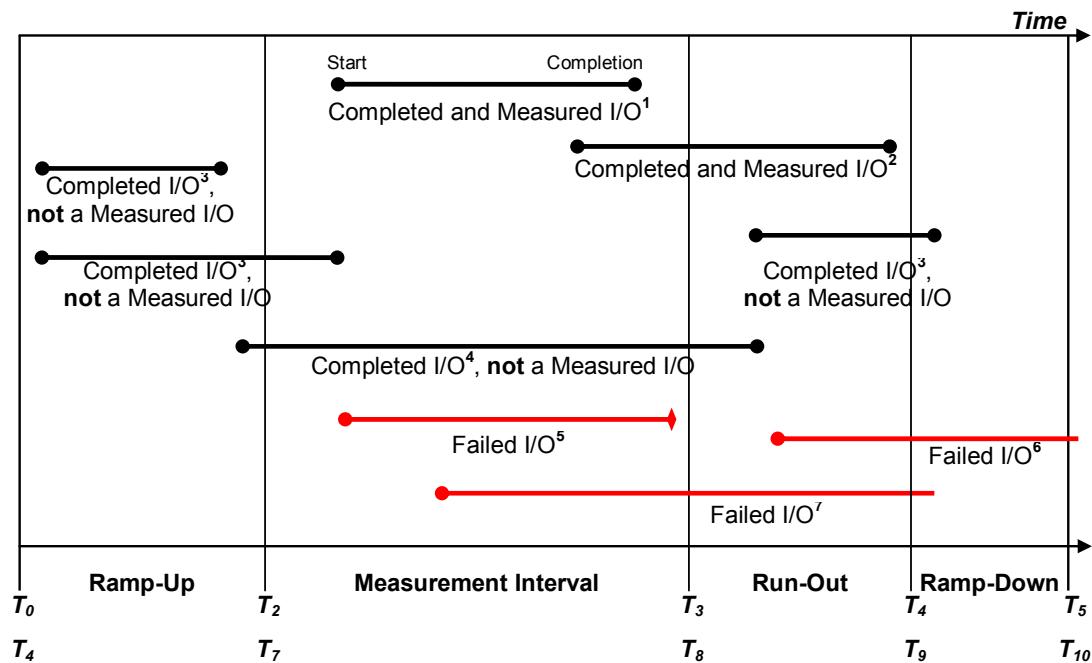

- Test Run 1: Maximum number of Streams, which is selected by the Test Sponsor
- Test Run 2: 50% of the maximum number of Streams used in Test Run 1.
- Test Run 3: 25% of the maximum number of Streams used in Test Run 1.
- Test Run 4: 12.5% of the maximum number of Streams used in Test Run 1.
- Test Run 5: 1 Stream.

Each of the five Test Runs in a Test Run Sequence will share the same attributes with the exception of the number of Streams. For example:

- Large File Processing, Read, 1024 KiB Transfer Size: Maximum Streams
- Large File Processing, Read, 1024 KiB Transfer Size: 50% of Maximum Streams
- Large File Processing, Read, 1024 KiB Transfer Size: 25% of Maximum Streams
- Large File Processing, Read, 1024 KiB Transfer Size: 12.5% of Maximum Streams
- Large File Processing, Read, 1024 KiB Transfer Size: 1 Stream

**Transfer Size:** The Transfer Size parameter specifies the number of bytes in KiB to transfer. (*Clause 3.4.7 of the SPC-2 Benchmark Specification*)

## I/O Completion Types

**Completed and Measured I/O<sup>1</sup>:** I/O started and completed within the Measurement Interval.

**Completed and Measured I/O<sup>2</sup>:** I/O started within the Measurement Interval and completed within Ramp Down.

**Completed I/O<sup>3</sup>:** I/O started before or after the Measurement Interval – not measured.

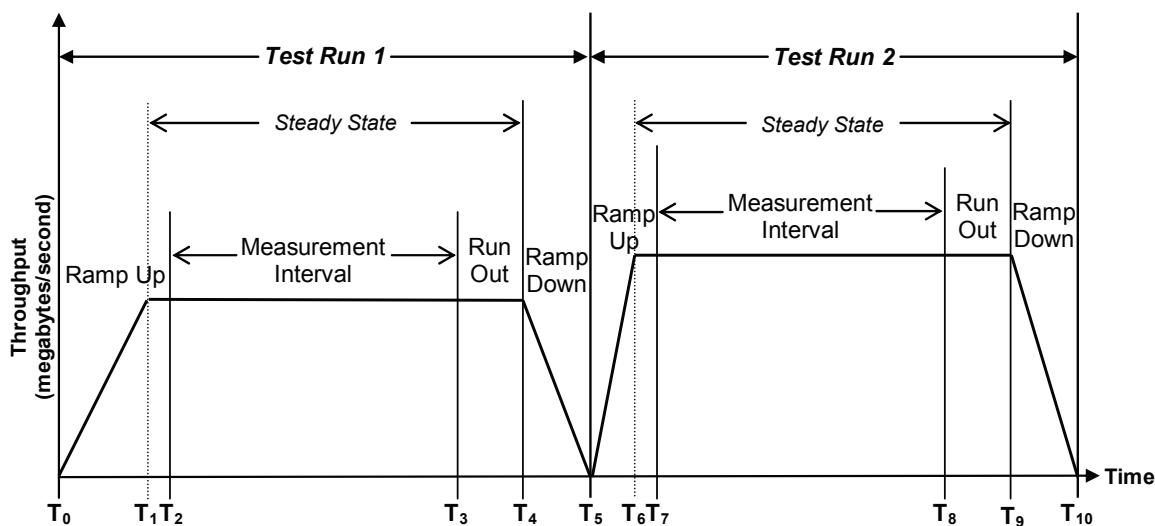

**Completed I/O<sup>4</sup>:** I/O started before and completed after the Measurement Interval – not measured.

**Failed I/O<sup>5</sup>:** Signaled as failed by System Software.

**Failed I/O<sup>6</sup>:** I/O did not complete prior to the end of Ramp-Down.

**Failed I/O<sup>7</sup>:** I/O did not complete prior to the end of Run-Out.

## SPC-2 Test Run Components

## **APPENDIX B: CUSTOMER TUNABLE PARAMETERS AND OPTIONS**

The queue depth of each LUN was set to 256 from a default value of 32. The maximum transfer size of LUN was explicitly set to 1 MiB, which is the default value of the parameter.

## **APPENDIX C: TESTED STORAGE CONFIGURATION (TSC) CREATION**

The creation and configuration of the TSC was done with XCLI, which is a command line interface utility for XIV management. The utility must be executed on a supported host platform (AXI, Linux or Windows) that can communicate with the XIV system via TCP/IP.

The following are the specific steps and XCLI commands used:

### **Step 1. Create two storage pools, each with capacity 79,656 GB**

```
pool_create pool=pool1 size=79656 snapshot_size=0  
pool_create pool=pool2 size=79656 snapshot_size=0
```

### **Step 2. Create 45 volumes in each pool (*volume capacity 1,755 GB*)**

```
vol_create vol=regress_01 size=1755 pool=pool1  
vol_create vol=regress_02 size=1755 pool=pool1  
vol_create vol=regress_03 size=1755 pool=pool1  
vol_create vol=regress_04 size=1755 pool=pool1  
vol_create vol=regress_05 size=1755 pool=pool1  
vol_create vol=regress_06 size=1755 pool=pool1  
vol_create vol=regress_07 size=1755 pool=pool1  
vol_create vol=regress_08 size=1755 pool=pool1  
vol_create vol=regress_09 size=1755 pool=pool1  
vol_create vol=regress_10 size=1755 pool=pool1  
vol_create vol=regress_11 size=1755 pool=pool1  
vol_create vol=regress_12 size=1755 pool=pool1  
vol_create vol=regress_13 size=1755 pool=pool1  
vol_create vol=regress_14 size=1755 pool=pool1  
vol_create vol=regress_15 size=1755 pool=pool1  
vol_create vol=regress_16 size=1755 pool=pool1  
vol_create vol=regress_17 size=1755 pool=pool1  
vol_create vol=regress_18 size=1755 pool=pool1  
vol_create vol=regress_19 size=1755 pool=pool1  
vol_create vol=regress_20 size=1755 pool=pool1  
vol_create vol=regress_21 size=1755 pool=pool1  
vol_create vol=regress_22 size=1755 pool=pool1  
vol_create vol=regress_23 size=1755 pool=pool1  
vol_create vol=regress_24 size=1755 pool=pool1  
vol_create vol=regress_25 size=1755 pool=pool1  
vol_create vol=regress_26 size=1755 pool=pool1  
vol_create vol=regress_27 size=1755 pool=pool1  
vol_create vol=regress_28 size=1755 pool=pool1  
vol_create vol=regress_29 size=1755 pool=pool1  
vol_create vol=regress_30 size=1755 pool=pool1  
vol_create vol=regress_31 size=1755 pool=pool1  
vol_create vol=regress_32 size=1755 pool=pool1  
vol_create vol=regress_33 size=1755 pool=pool1  
vol_create vol=regress_34 size=1755 pool=pool1  
vol_create vol=regress_35 size=1755 pool=pool1  
vol_create vol=regress_36 size=1755 pool=pool1  
vol_create vol=regress_37 size=1755 pool=pool1  
vol_create vol=regress_38 size=1755 pool=pool1  
vol_create vol=regress_39 size=1755 pool=pool1  
vol_create vol=regress_40 size=1755 pool=pool1  
vol_create vol=regress_41 size=1755 pool=pool1  
vol_create vol=regress_42 size=1755 pool=pool1  
vol_create vol=regress_43 size=1755 pool=pool1  
vol_create vol=regress_44 size=1755 pool=pool1  
vol_create vol=regress_45 size=1755 pool=pool1
```

```
vol_create vol=regress_46 size=1755 pool=pool2
vol_create vol=regress_47 size=1755 pool=pool2
vol_create vol=regress_48 size=1755 pool=pool2

```

### Step 3. Define 3 hosts which will have access to the volumes

```
host_define host=perfsh6
host_define host=perfsh3a
host_define host=perfsh3b
```

### Step 4. Define mappings such that each host has access to each volume

```
map_vol host=perfsh6 vol=regress_01 lun=1
map_vol host=perfsh6 vol=regress_02 lun=2
map_vol host=perfsh6 vol=regress_03 lun=3
map_vol host=perfsh6 vol=regress_04 lun=4
map_vol host=perfsh6 vol=regress_05 lun=5
map_vol host=perfsh6 vol=regress_06 lun=6
```

```
map_vol host=perfsh6 vol=regress_07 lun=7
map_vol host=perfsh6 vol=regress_08 lun=8
map_vol host=perfsh6 vol=regress_09 lun=9
map_vol host=perfsh6 vol=regress_10 lun=10
map_vol host=perfsh6 vol=regress_11 lun=11
map_vol host=perfsh6 vol=regress_12 lun=12
map_vol host=perfsh6 vol=regress_13 lun=13
map_vol host=perfsh6 vol=regress_14 lun=14
map_vol host=perfsh6 vol=regress_15 lun=15
map_vol host=perfsh6 vol=regress_16 lun=16
map_vol host=perfsh6 vol=regress_17 lun=17

```

### Step 5. Define WWPNs for use by each host.

```
host_add_port host=perfsh6 fcaddress=10000000C9A9F186
host_add_port host=perfsh6 fcaddress=10000000C9A928D8

host_add_port host=perfsh3a fcaddress=10000000C9B7999D
host_add_port host=perfsh3a fcaddress=10000000C9B77235
host_add_port host=perfsh3a fcaddress=10000000C9B84E23
host_add_port host=perfsh3a fcaddress=10000000C9B83FCF
host_add_port host=perfsh3a fcaddress=10000000C9B848CB
host_add_port host=perfsh3a fcaddress=10000000C9B796C7
host_add_port host=perfsh3a fcaddress=10000000C9B79B61
host_add_port host=perfsh3a fcaddress=10000000C9B79AF5

host_add_port host=perfsh3b fcaddress=10000000C9B83FBD
host_add_port host=perfsh3b fcaddress=10000000C9B841D1
host_add_port host=perfsh3b fcaddress=10000000C9A933FD
host_add_port host=perfsh3b fcaddress=10000000C9A92EEF
host_add_port host=perfsh3b fcaddress=10000000C9A474EF
host_add_port host=perfsh3b fcaddress=10000000C9B846AD
host_add_port host=perfsh3b fcaddress=10000000C9B812DB
host_add_port host=perfsh3b fcaddress=10000000C9A1E993
```

### AIX Configuration

After Steps 1-5 were completed, the resulting volumes were detected by AIX by issuing the command **cfgmgr** on each of the Host Systems. The queue depth and maximum transfer size of each volume, documented in Appendix B, were set by executing the commands contained in the following script on each of the Host Systems:

```
luns=$(lsdev -Cc disk | grep XIV | awk '{ print $1 }')
for i in $luns
do
    rmdev -l hdisk$i
    chdev -l hdisk$i -a queue_depth=256
    chdev -l hdisk$i -a max_transfer=0x100000
    mkdev -l hdisk$i
    let i="i+1"
done
```

## **APPENDIX D: SPC-2 WORKLOAD GENERATOR STORAGE COMMANDS AND PARAMETERS**

The following SPC-2 Workload Generator command and parameters files were used for execution of the SPC-2 Logical Volume initialization, SPC-2/E Pre-Idle and Post-Idle Phases, as well as the Large File Processing (LFP), Large Database Query (LDQ), Video on Demand Delivery (VOD) and Persistence Tests.

### **Common Entries**

The following command lines appear at the beginning of each of the listed SPC-2 Workload Generator command and parameter files.

```
*local host is (perfsh6,9.11.211.126)

```

## **APPENDIX E: SPC-2 WORKLOAD GENERATOR EXECUTION COMMANDS AND PARAMETERS**

### **Video on Demand Delivery, Large File Processing Test, Large Database Query Tests, and Persistence Test Run 1**

The following script was used to execute the Video on Demand Delivery, Large File Processing and Large Database Query Tests, as well as, Persistence Test Run 1.

```
export PATH=$PATH:/usr/java5/bin
export SPC2HOME=/perform_xiv/spc2install
export CLASSPATH=$SPC2HOME
export LIBPATH=$SPC2HOME/aix
export IBM_JAVADUMP_OUTOFMEMORY=false
export IBM_HEAPDUMP_OUTOFMEMORY=false

java -Xoptionsfile=javaopts.cfg vdbench -f lfp_preidle.cfg -init -o init_output
java -Xoptionsfile=javaopts.cfg vdbench -f lfp_preidle.cfg -o preidle_output
sleep 2100
java -Xoptionsfile=javaopts.cfg vdbench -f lfp_postidle.cfg -o postidle_output

java -Xoptionsfile=javaopts.cfg vdbench -f vod.cfg -o vod_output
java -Xoptionsfile=javaopts.cfg vdbench -f lfp.cfg -o lfp_output
java -Xoptionsfile=javaopts.cfg vdbench -f ldq.cfg -o ldq_output
java -Xoptionsfile=javaopts.cfg vdbench -f persistw.cfg -o persistw_output
xcli -m perfxiv3a -u admin -p adminadmin "disk_list" > diskdat.txt
rm capdat.txt
for h in `lsdev -Cc disk | awk '/XIV/ {print $1}'` 
do
echo $h `bootinfo -s $h` >> capdat.txt
done
```

### **Persistence Test Run 2**

The following script was used to execute Persistence Test Run 2.

```
#!/usr/bin/ksh
export PATH=$PATH:/usr/java5/bin
export SPC2HOME=/perform/spc2install
export CLASSPATH=$SPC2HOME
export LIBPATH=$SPC2HOME/aix
export IBM_JAVADUMP_OUTOFMEMORY=false
export IBM_HEAPDUMP_OUTOFMEMORY=false
java -Xoptionsfile=javaopts.cfg vdbench -f persistr.cfg -o persistr_output
```
