## AUDIT CERTIFICATION

The Right Metric For Sizing IT

MacroSan Technologies Co., Ltd.  
11F-12F Building A, No.482  
Qianmo Road, Binjiang District  
Hangzhou, P.R.China

February 9, 2018

I verified the SPC Benchmark 1™ (SPC-1™ Revision 3.6.0) test execution and performance results of the following Tested Storage Product:

### **MACROSAN MS2500G2-25E**

The results were:

|                                 |                               |
|---------------------------------|-------------------------------|
| <b>SPC-1 IOPS™</b>              | <b>300,028</b>                |
| <b>SPC-1 Price-Performance™</b> | <b>\$379.50/SPC-1 KIOPS ™</b> |
| SPC-1 IOPS™ Response Time       | 0.480 ms                      |
| SPC-1 Overall Response Time     | 0.388 ms                      |
| SPC-1 ASU Capacity              | 10,640.0 GB                   |
| SPC-1 ASU Price                 | \$10.71/GB                    |
| SPC-1 Total System Price        | \$113,858.31                  |

In my opinion, these performance results were produced in compliance with the SPC requirements for the benchmark.

The testing was executed using the SPC-1 Toolkit Version 3.0.2 build 1-g823a. The audit process was conducted remotely, in accordance with the SPC Policies, and met the requirements for the benchmark.

A Letter of Good Faith was issued by the Test Sponsor, stating the accuracy and completeness of the documentation and testing data provided in support of the audit of this result.

A Full Disclosure Report for this result was prepared by InfoSizing, reviewed and approved by the Test Sponsor, and can be found at [www.storageperformance.org](http://www.storageperformance.org) under the Submission Identifier **A31011**.

A31011

MACROSAN MS2500G2-25E

p.2

The independent audit process conducted by InfoSizing included the verifications of the following items:

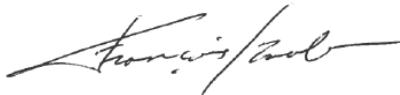

- The physical capacity of the data repository;
- The total capacity of the Application Storage Unit (ASU);
- The accuracy of the Benchmark Configuration diagram;
- The tuning parameters used to configure the Benchmark Configuration;
- The Workload Generator commands used to execute the testing;
- The validity and integrity of the test result files;
- The compliance of the results from each performance test;
- The compliance of the results from the persistence test;
- The compliance of the submitted pricing model; and
- The differences between the tested and the priced configuration, if any.

The Full Disclosure Report for this result was prepared in accordance with the disclosure requirements set forth in the specification for the benchmark.

The following benchmark requirements, if any, were waived according to the SPC Policies:

- None.

Respectfully Yours,

Francois Raab, Certified SPC Auditor

Subject: SPC-1 Letter of Good Faith for the MacroSAN MS2500G2-25E

MacroSAN Technologies Co., Ltd. is the SPC-1 Test Sponsor for the above listed product. To the best of our knowledge and belief, the required SPC-1 benchmark results and materials we have submitted for that product are complete, accurate, and in full compliance with V3.5.0 of the SPC-1 benchmark specification.

In addition, we have reported any items in the Benchmark Configuration and execution of the benchmark that affected the reported results even if the items are not explicitly required to be disclosed by the SPC-1 benchmark specification.

## Benchmark Configuration Diagram

## Tested Storage Product Description

The MacroSAN MS2500G2-25E is a new product in the MacroSAN MS2500G2 series, which is the new generation of MacroSAN entry-level data center storage products, oriented toward small size data centers and branches. Based on its leading hardware architecture and rich software function, the MS2500G2-25E can provide more storage solutions for the small business to guarantee data safety and service continuity, including database storage solution, centralized online storage, backup storage solution, data disaster recovery solution and more.

The MS2500G2-25E provides an optimal balance between performance and cost, with better reliability and expansion capability, to support customer's rapid business growth.

**Discount Details:** The discounts shown are generally available, and based on the capacity and total price of the storage configuration purchased.

**Warranty:** Pricing includes Gold-Level Service with: 24x7 online support, unlimited software upgrades and bug fixes, and on-site presence of a qualified maintenance engineer within 4 hours of a problem acknowledgement, inside the Target Market.

**Availability Date:** Currently available.

## CONFIGURATION INFORMATION

### Benchmark Configuration and Tested Storage Configuration

The following diagram illustrates the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC) and the Host System(s).

## **Storage Network Configuration**

The Tested Storage Configuration (TSC) involved an external storage subsystem made of 2 MacroSAN MS2500G2 Engines, driven by 2 host systems (Dell PowerEdge R730). Each R730 connected one-to-one to each MS2500G2. Each one-to-one connection was established using two ports from each of the four 4-port HBAs on the R730; and all ports from each of the two 4-port I/O Modules on each of the two Controllers/Storage Processors in each MS2500G2. These paths used Fibre Chanel operating at 8Gbps.

## **Host System and Tested Storage Configuration Components**

The following table lists the components of the Host System(s) and the Tested Storage Configuration (TSC).

| Host Systems   |
|--|
| 2 x Dell PowerEdge R730 servers, each with:<br>2 x Intel Xeon E5-2620 V4 (2.1 GHz, 8-Core, 20MB L3)<br>64GB Main Memory<br>Red Hat Enterprise Linux 7.1  |
| Priced Storage Configuration   |
| 8 x QLogic QLE2564 4-port FC HBAs  |
| 2 x MacroSAN MS2500G2 Engines, each with:<br>2 x Controllers/Storage Processors, each with:<br>32GB cache<br>1 x 4-port 8Gb FC I/O Modules<br>1 x 2-port 10Gb SFP Modules<br>1 x 2-port 6Gb SAS 2.0 I/O Modules<br>12 x 480GB MLC SSDs<br>2 x External storage enclosures, each with:<br>12 x 480GB MLC SSDs |

## **Differences Between Tested and Priced Storage Configurations**

There were no differences between the Tested Storage Configuration and the Priced Storage Configuration.

## **Component Changes in Revised Full Disclosure Report**

The following table outlines component changes that were made in revisions to this Full Disclosure Report.

| Original Component | Revised Component | Description of Change |
|--------------------|-------------------|-----------------------|
| n/a                | n/a               | Initial submission    |

## Benchmark Configuration Creation Process

### Customer Tuning Parameters and Options

All the customer tuning parameters and options that have been altered from their default values for this benchmark are included in Appendix C and in the Supporting Files (see Appendix A).

### Tested Storage Configuration Creation

A detailed description of how the logical representation of the TSC was created is included in Appendix D and in the Supporting Files (see Appendix A).

### Tested Storage Configuration Inventory

An inventory of the components in the TSC, as seen by the Benchmark Configuration, is included in Appendix E and in the Supporting Files (see Appendix A).

### Workload Generator Storage Configuration

The SPC-1 Workload Generator storage configuration commands and parameters used to invoke the execution of the tests are included in Appendix F and in the Supporting Files (see Appendix A).

### Logical Volume Capacity and ASU Mapping

The following table details the capacity of each ASU and how they are mapped to logical volumes (LV).

|                           | LV per ASU | LV Capacity | Used per LV | Total per ASU   | % ASU Capacity |
|---------------------------|------------|-------------|-------------|-----------------|----------------|
| <b>ASU-1</b>              | 18         | 266.0       | 266.0       | 4,788.0         | 45%            |
| <b>ASU-2</b>              | 18         | 266.0       | 266.0       | 4,788.0         | 45%            |
| <b>ASU-3</b>              | 2          | 532.0       | 532.0       | 1,064.0         | 10%            |
| <b>SPC-1 ASU Capacity</b> |            |             |             | <b>10,640.0</b> |                |

### Physical Storage Capacity and Utilization

The following table details the Physical Capacity of the storage devices and the Physical Capacity Utilization (percentage of Total Physical Capacity used) in support of hosting the ASUs.

| Devices                              | Count | Physical Capacity | Total Capacity  |
|--------------------------------------|-------|-------------------|-----------------|
| 480GB SSD                            | 48    | 446.0             | 21,408.0        |
| <b>Total Physical Capacity</b>       |       |                   | <b>21,408.0</b> |
| <b>Physical Capacity Utilization</b> |       |                   | <b>49.70%</b>   |

### **Data Protection**

The data protection level used for all logical volumes was **Protected 2**, which was accomplished by configuring 2 pools of 24 drives (one pool for each Engine), into 8 RAID 10 arrays. All components and access paths from the Host Systems to the Storage Devices were redundant.

## **BENCHMARK EXECUTION RESULTS**

This portion of the Full Disclosure Report documents the results of the various SPC-1 Tests, Test Phases, and Test Runs.

### **Benchmark Execution Overview**

#### **Workload Generator Input Parameters**

The SPC-1 Workload Generator commands and input parameters for the Test Phases are presented in the Supporting Files (see Appendix A).

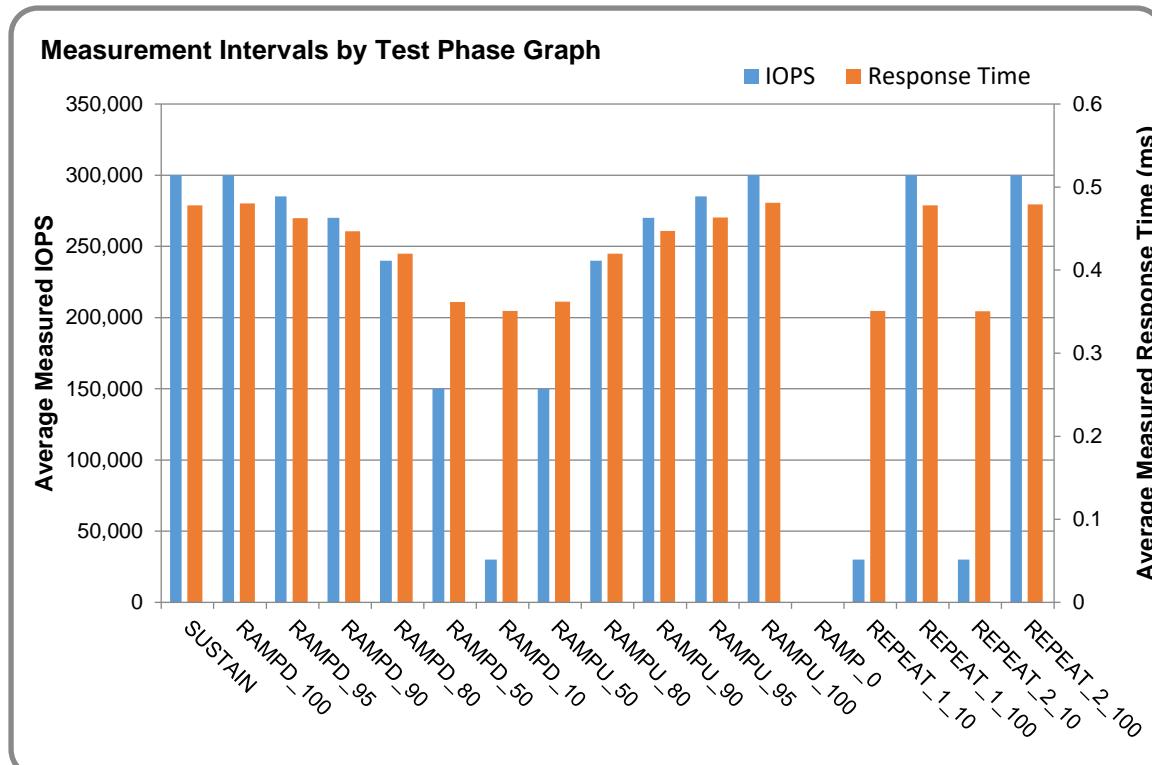

#### **Primary Metrics Test Phases**

The benchmark execution consists of the Primary Metrics Test Phases, including the Test Phases SUSTAIN, RAMPD\_100 to RAMPD\_10, RAMPU\_50 to RAMPU\_100, RAMP\_0, REPEAT\_1 and REPEAT\_2.

Each Test Phase starts with a transition period followed by a Measurement Interval.

#### **Measurement Intervals by Test Phase Graph**

The following graph presents the average IOPS and the average Response Times measured over the Measurement Interval (MI) of each Test Phase.

**Exception and Waiver**

The audit of this SPC-1 result was conducted on-site. During the course of the audit, no exceptions were encountered and no benchmark requirements were waived.

## SUSTAIN Test Phase

### SUSTAIN – Results File

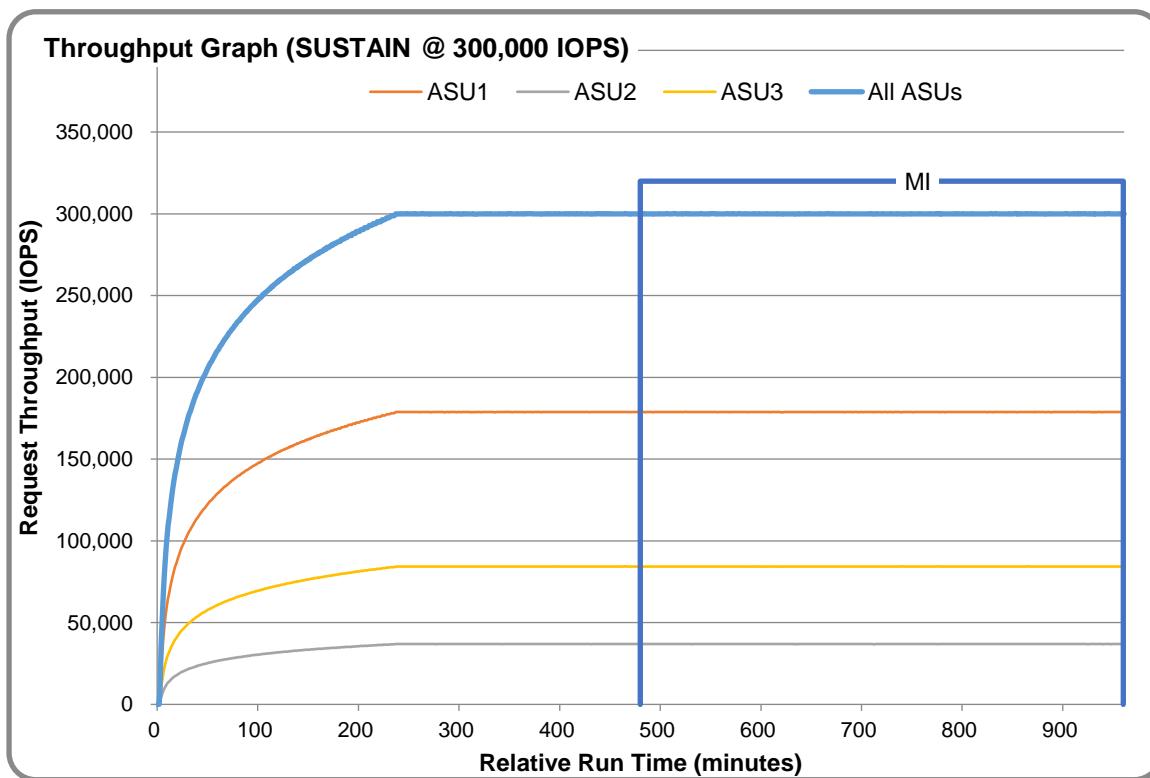

The results file generated during the execution of the SUSTAIN Test Phase is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

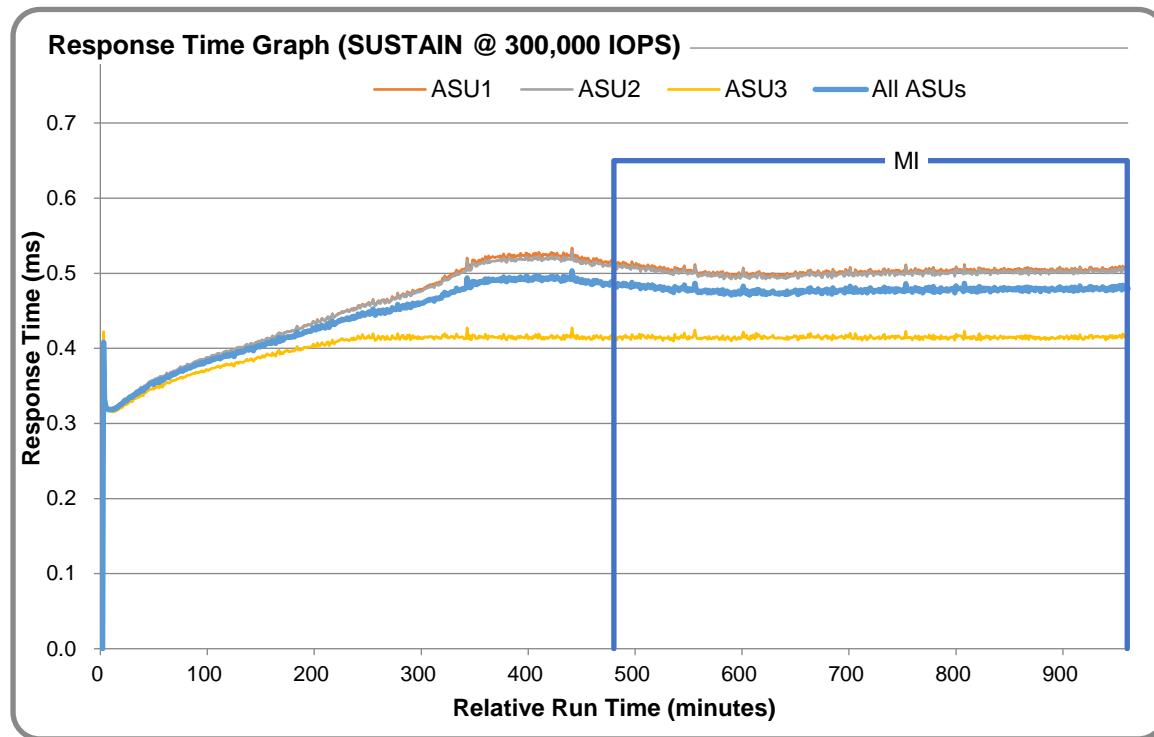

### SUSTAIN – Execution Times

| Interval             | Start Date & Time | End Date & Time   | Duration |
|----------------------|-------------------|-------------------|----------|
| Transition Period    | 5-Feb-18 12:13:48 | 5-Feb-18 20:13:44 | 7:59:56  |
| Measurement Interval | 5-Feb-18 20:13:44 | 6-Feb-18 04:13:45 | 8:00:01  |

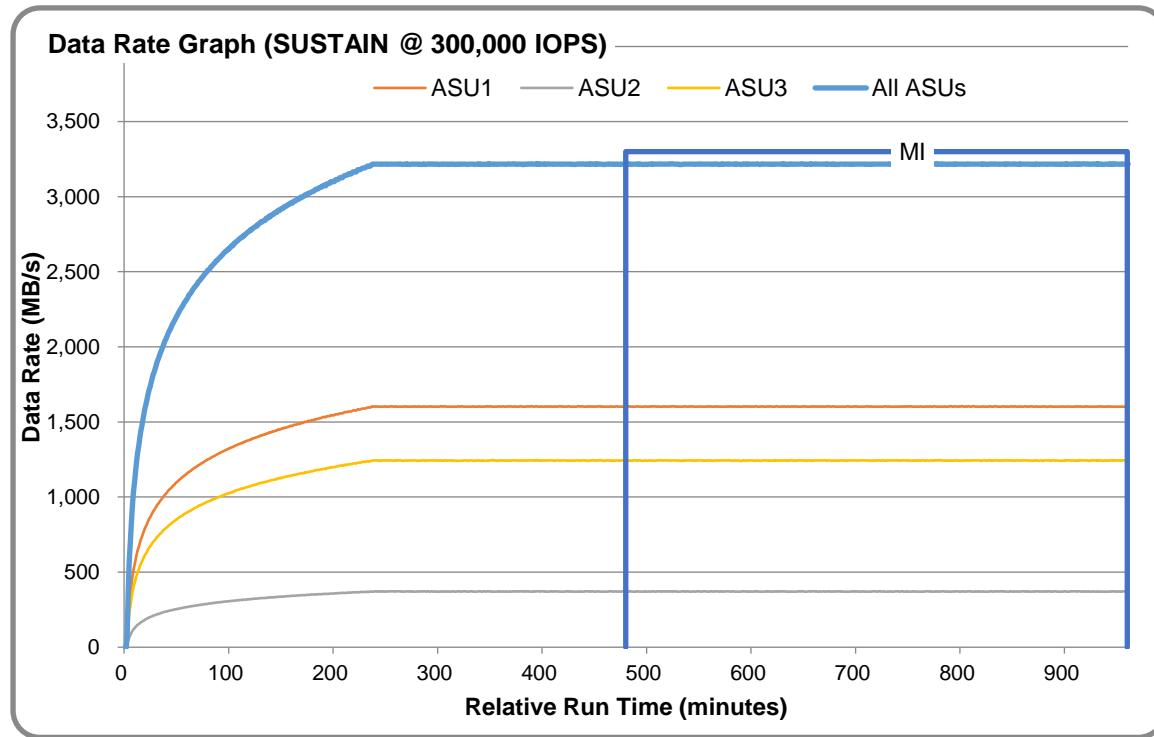

### SUSTAIN – Throughput Graph

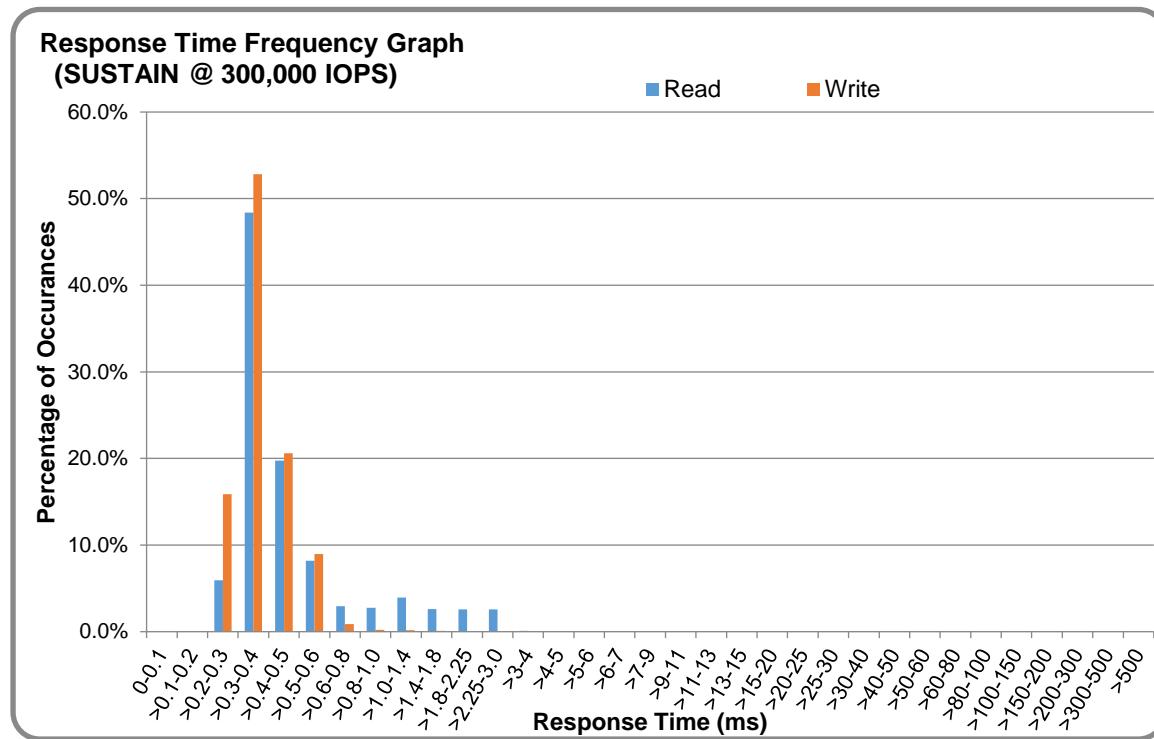

### SUSTAIN – Response Time Graph

### SUSTAIN – Data Rate Graph

## SUSTAIN – Response Time Frequency Graph

## SUSTAIN – Intensity Multiplier

The following table lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percentage of difference (Difference) between Target and Measured.

|                   | ASU1-1 | ASU1-2 | ASU1-3 | ASU1-4 | ASU2-1 | ASU2-2 | ASU2-3 | ASU3-1 |
|-------------------|--------|--------|--------|--------|--------|--------|--------|--------|
| <b>Defined</b>    | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Measured</b>   | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Variation</b>  | 0.0012 | 0.0004 | 0.0008 | 0.0005 | 0.0017 | 0.0009 | 0.0012 | 0.0004 |
| <b>Difference</b> | 0.002% | 0.004% | 0.008% | 0.001% | 0.017% | 0.011% | 0.011% | 0.005% |

## RAMPD\_100 Test Phase

### RAMPD 100 – Results File

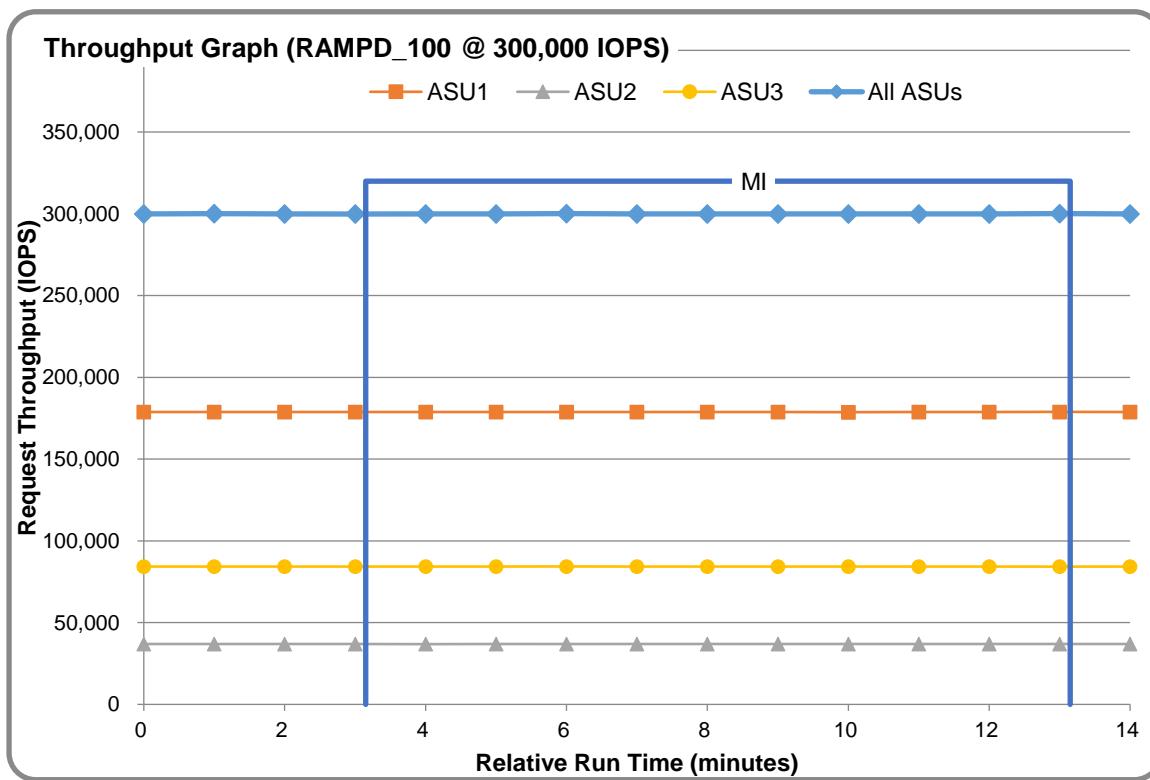

The results file generated during the execution of the RAMPD\_100 Test Phase is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

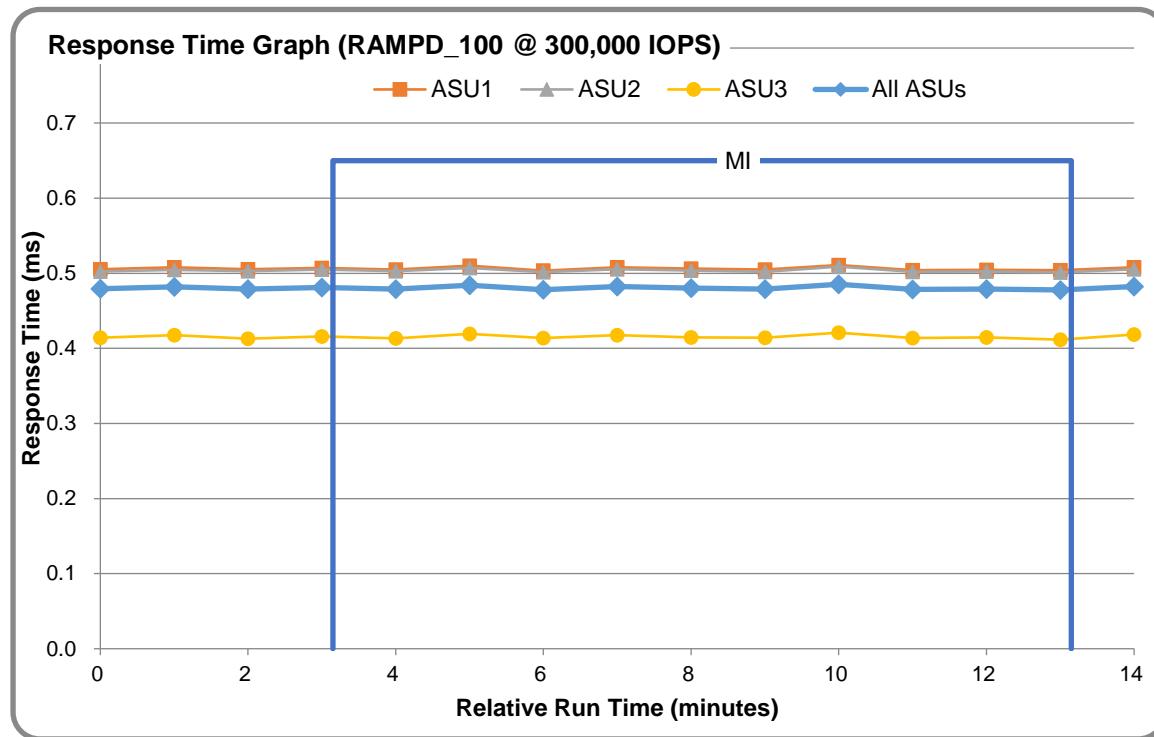

### RAMPD 100 – Execution Times

| Interval             | Start Date & Time | End Date & Time   | Duration |
|----------------------|-------------------|-------------------|----------|
| Transition Period    | 6-Feb-18 04:14:44 | 6-Feb-18 04:17:44 | 0:03:00  |
| Measurement Interval | 6-Feb-18 04:17:44 | 6-Feb-18 04:27:45 | 0:10:01  |

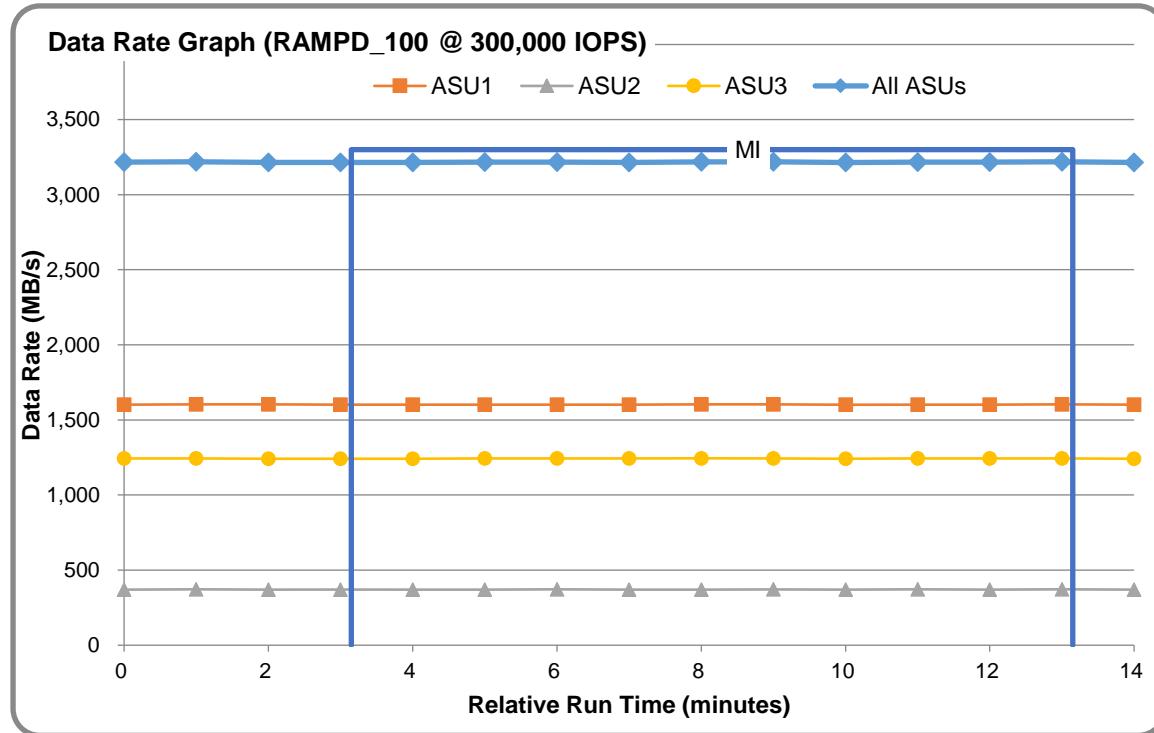

### RAMPD 100 – Throughput Graph

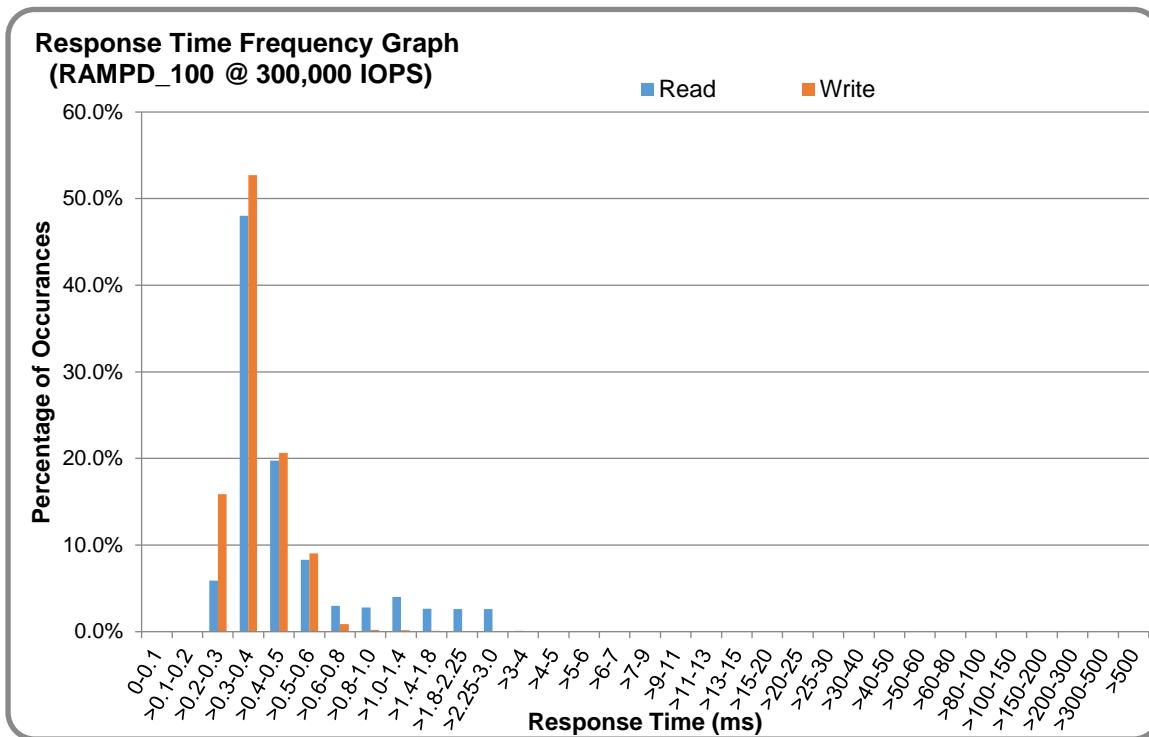

### RAMPD 100 – Response Time Graph

### RAMPD 100 – Data Rate Graph

## RAMPD 100 – Response Time Frequency Graph

## RAMPD 100 – Intensity Multiplier

The following table lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percentage of difference (Difference) between Target and Measured.

|                   | ASU1-1 | ASU1-2 | ASU1-3 | ASU1-4 | ASU2-1 | ASU2-2 | ASU2-3 | ASU3-1 |
|-------------------|--------|--------|--------|--------|--------|--------|--------|--------|
| <b>Defined</b>    | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Measured</b>   | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Variation</b>  | 0.0014 | 0.0004 | 0.0009 | 0.0003 | 0.0017 | 0.0009 | 0.0010 | 0.0004 |
| <b>Difference</b> | 0.027% | 0.000% | 0.002% | 0.017% | 0.052% | 0.043% | 0.019% | 0.006% |

## RAMPD 100 – I/O Request Summary

|  |             |
|--|-------------|
| I/O Requests Completed in the Measurement Interval | 180,018,884 |
| I/O Requests Completed with Response Time <= 30 ms | 180,018,647 |
| I/O Requests Completed with Response Time > 30 ms  | 237         |

## Response Time Ramp Test

### Response Time Ramp Test – Results File

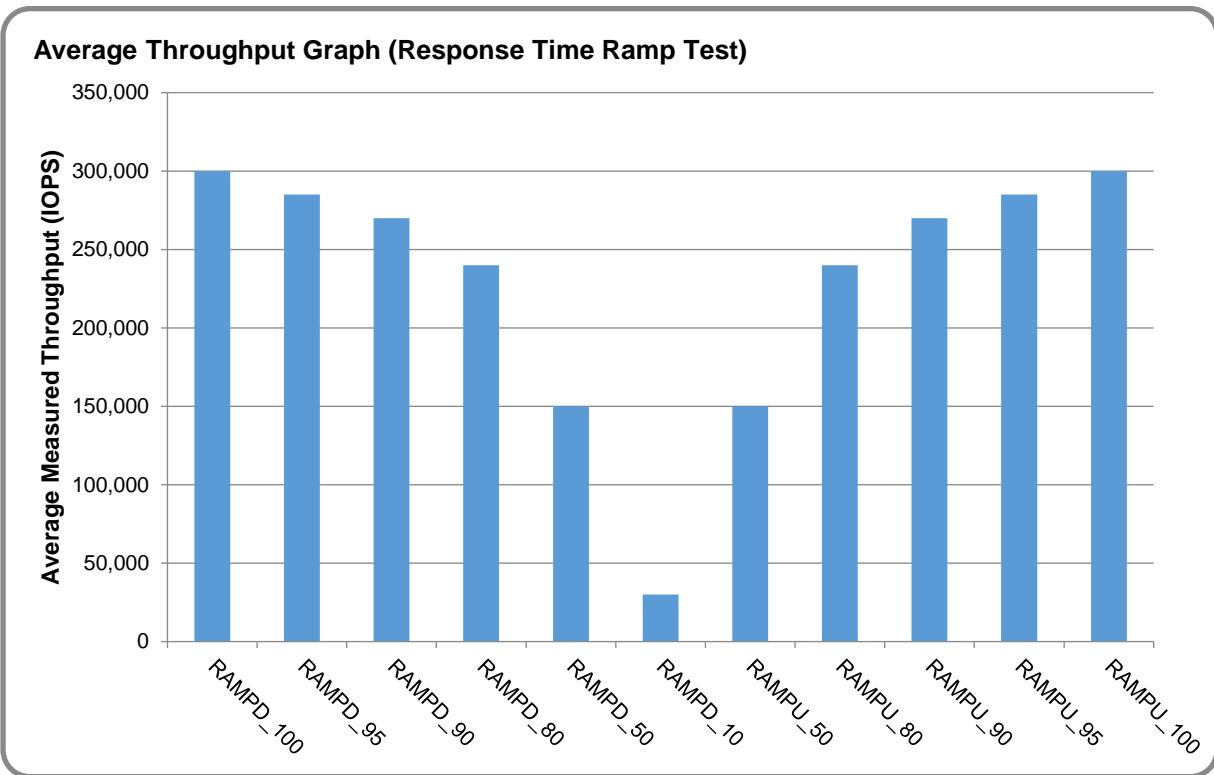

The results file generated during the execution of the Response Time Ramp Test is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

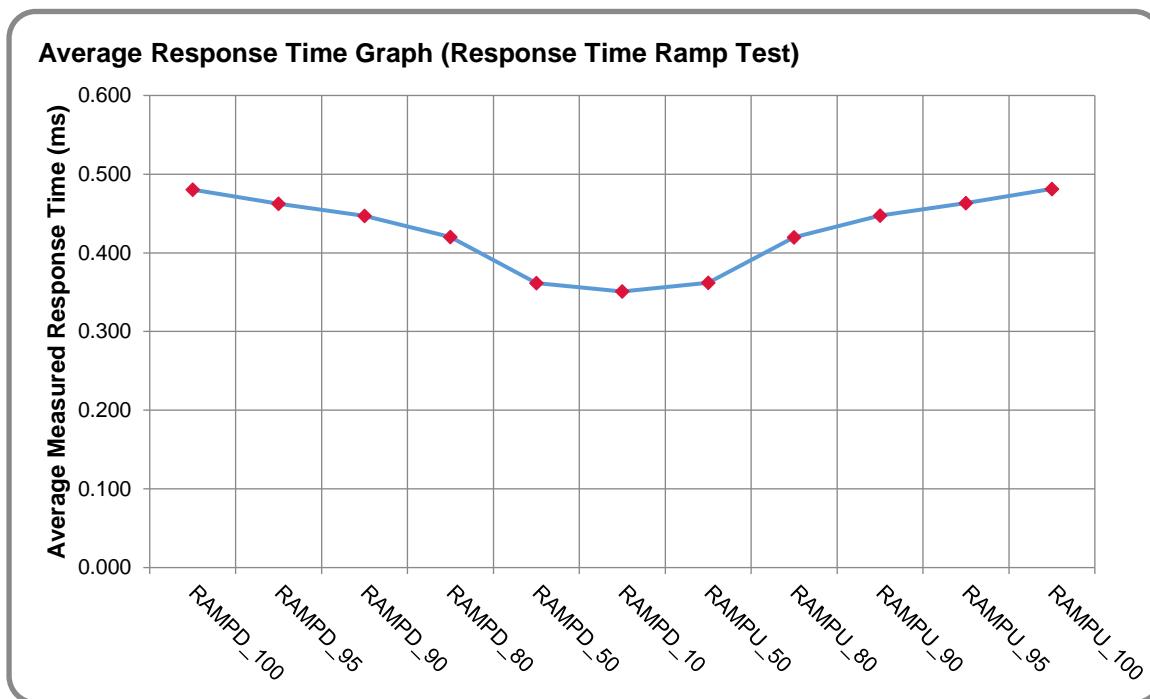

### Response Time Ramp Test – Phases

The Response Time Ramp Test is comprised of 11 Test Phases, including six Ramp-Down Phases (executed at 100%, 95%, 90%, 80%, 50%, and 10% of the Business Scaling Unit) and five Ramp-Up Phases (executed at 50%, 80%, 90%, 95%, and 100% of the Business Scaling Unit).

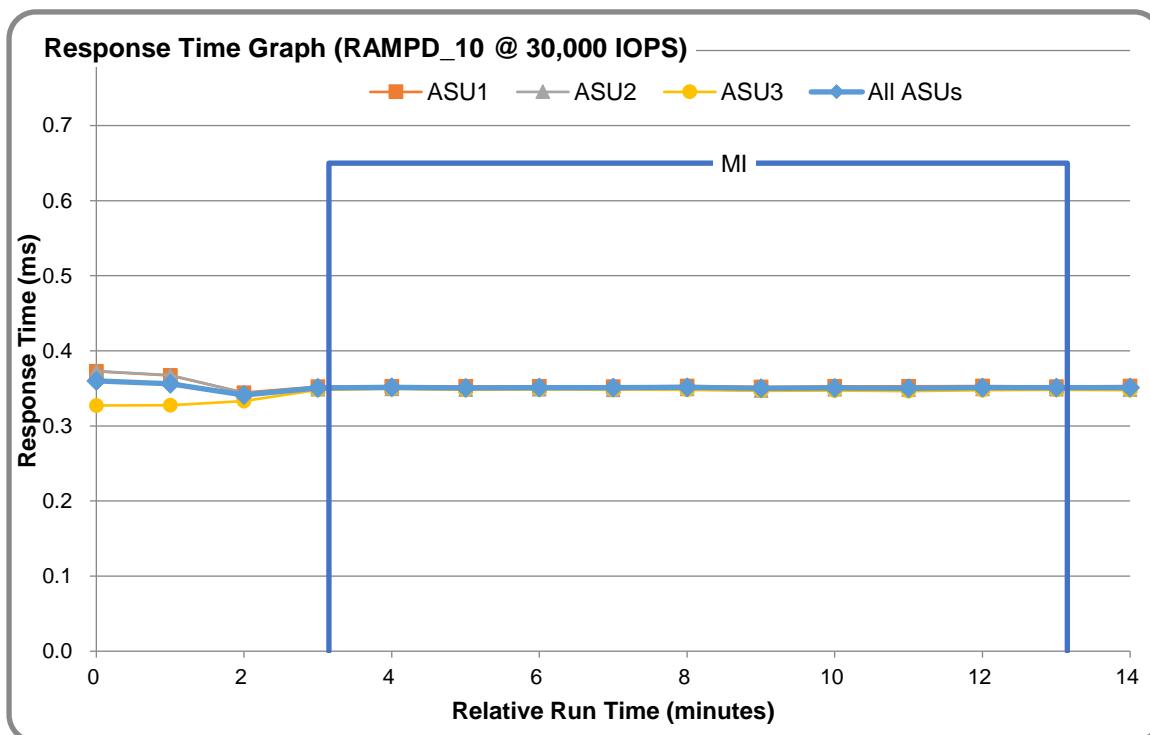

### Response Time Ramp Test – Average Throughput Graph

### Response Time Ramp Test – Average Response Time Graph

### Response Time Ramp Test – RAMPD\_10 Response Time Graph

## Repeatability Test

### Repeatability Test Results File

The results file generated during the execution of the Repeatability Test is included in the Supporting Files (see Appendix A) as follows:

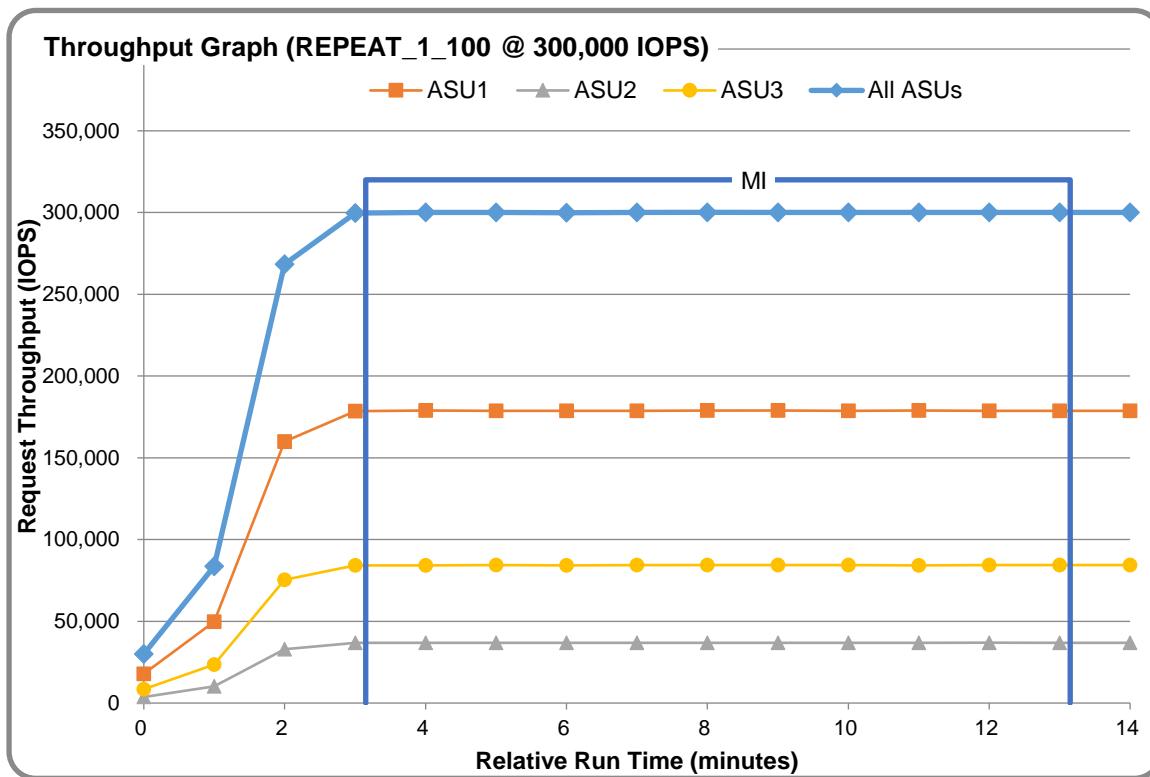

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

### Repeatability Test Results

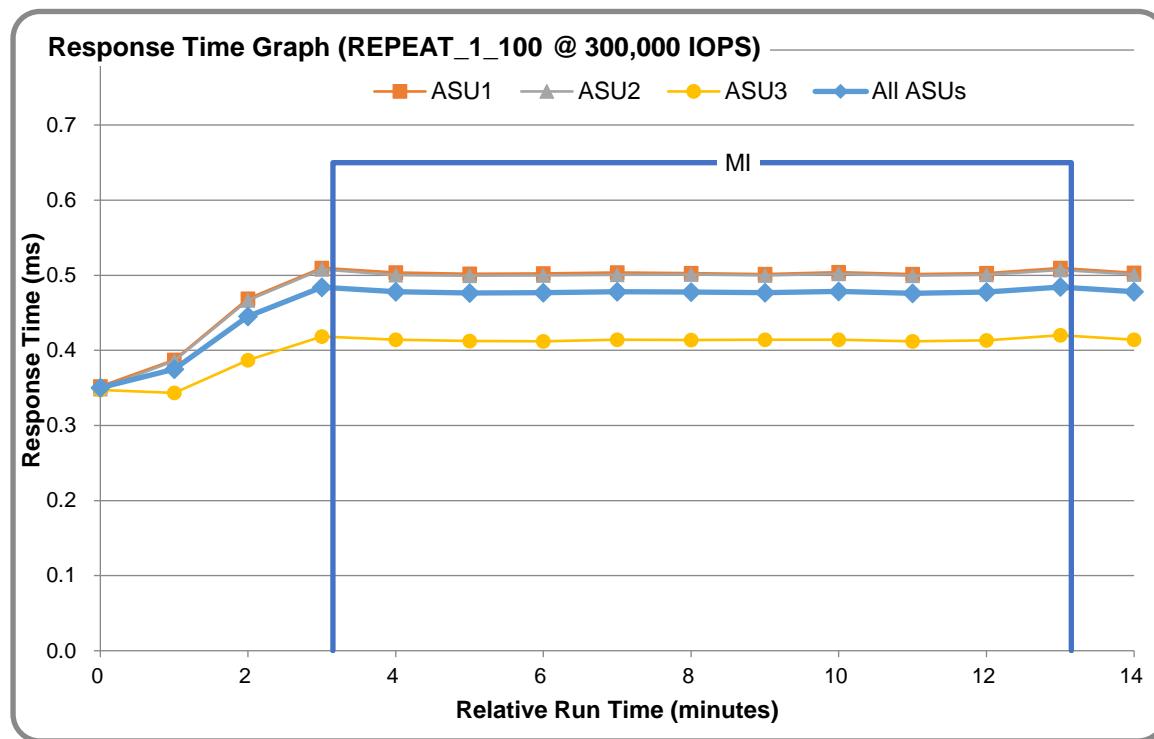

The throughput measurements for the Response Time Ramp Test (RAMPD) and the Repeatability Test Phases (REPEAT\_1 and REPEAT\_2) are listed in the tables below.

| Test Phase | 100% IOPS | 10% IOPS |
|------------|-----------|----------|
| RAMPD      | 300,028.5 | 30,015.9 |
| REPEAT_1   | 300,031.7 | 30,011.0 |
| REPEAT_2   | 299,978.7 | 30,007.4 |

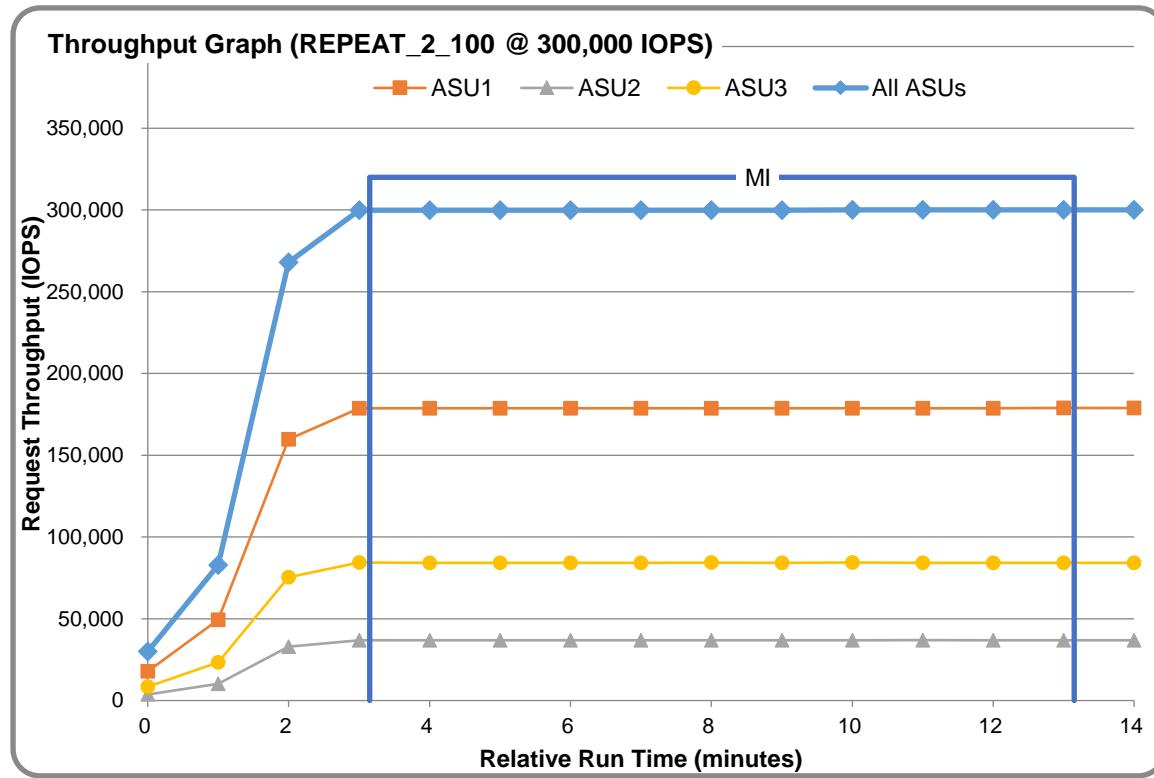

### REPEAT\_1 100 – Throughput Graph

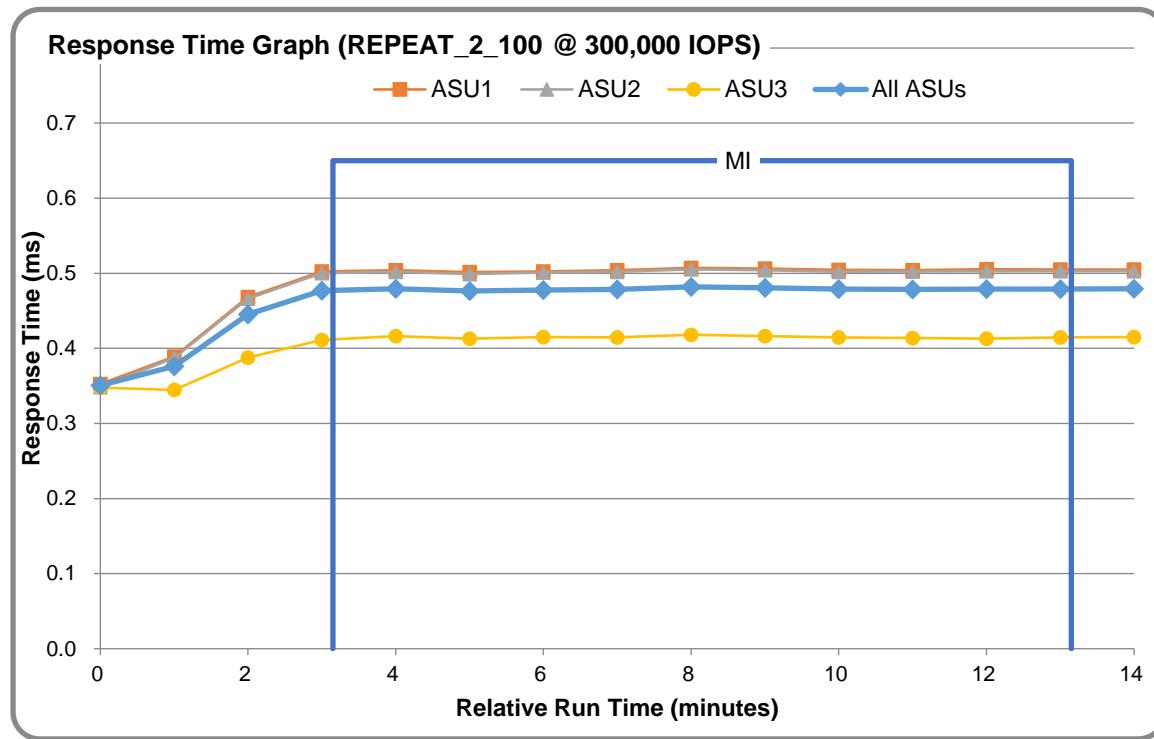

### REPEAT 1 100 – Response Time Graph

### REPEAT 2 100 – Throughput Graph

## REPEAT\_2\_100 – Response Time Graph

## Repeatability Test – Intensity Multiplier

The following tables lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percent of difference (Difference) between Target and Measured.

### REPEAT\_1\_100 Test Phase

|                   | ASU1-1 | ASU1-2 | ASU1-3 | ASU1-4 | ASU2-1 | ASU2-2 | ASU2-3 | ASU3-1 |
|-------------------|--------|--------|--------|--------|--------|--------|--------|--------|
| <b>Defined</b>    | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Measured</b>   | 0.0350 | 0.2809 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Variation</b>  | 0.0010 | 0.0005 | 0.0008 | 0.0005 | 0.0024 | 0.0005 | 0.0015 | 0.0004 |
| <b>Difference</b> | 0.053% | 0.018% | 0.034% | 0.022% | 0.075% | 0.004% | 0.031% | 0.002% |

### REPEAT\_2\_100 Test Phase

|                   | ASU1-1 | ASU1-2 | ASU1-3 | ASU1-4 | ASU2-1 | ASU2-2 | ASU2-3 | ASU3-1 |
|-------------------|--------|--------|--------|--------|--------|--------|--------|--------|
| <b>Defined</b>    | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Measured</b>   | 0.0350 | 0.2810 | 0.0700 | 0.2100 | 0.0180 | 0.0700 | 0.0350 | 0.2810 |
| <b>Variation</b>  | 0.0010 | 0.0003 | 0.0006 | 0.0005 | 0.0016 | 0.0011 | 0.0013 | 0.0004 |
| <b>Difference</b> | 0.008% | 0.006% | 0.002% | 0.002% | 0.079% | 0.006% | 0.042% | 0.004% |

## Data Persistence Test

### Data Persistence Test Result files

The results files generated during the execution of the Data Persistence Test is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_PERSIST\_1\_0\_Raw\_Results.xlsx**
- **SPC1\_PERSIST\_2\_0\_Raw\_Results.xlsx**

### Data Persistence Test Execution

The Data Persistence Test was executed using the following sequence of steps:

- The PERSIST\_1\_0 Test Phase was executed to completion.
- The Benchmark Configuration was taken through an orderly shutdown process and powered off.
- The Benchmark Configuration was powered on and taken through an orderly startup process.
- The PERSIST\_2\_0 Test Phase was executed to completion.

### Data Persistence Test Results

| Data Persistence Test Phase: Persist1                   |            |
|---|------------|
| Total Number of Logical Blocks Written                  | 37,124,920 |
| Total Number of Logical Blocks Verified                 | 20,082,674 |
| Total Number of Logical Blocks Overwritten              | 17,042,246 |
| Total Number of Logical Blocks that Failed Verification | 0          |
| Time Duration for Writing Test Logical Blocks (sec.)    | 300        |
| Size in Bytes of each Logical Block                     | 8,192      |
| Number of Failed I/O Requests During the Test           | 0          |

### Committed Data Persistence Implementation

The TSC uses cache power-loss protection technology. Each MS2500G2 Engine has two batteries and a built-in SSD. When an accidental power loss occurs, the controllers continue to be powered by the built-in batteries and are able to flush the data in their cache to permanent storage on built-in SSD. When power is restored and the Engine is restarted, the data on the built-in SSD is used for automatic recovery.

## **APPENDIX A: SUPPORTING FILES**

The following table details the content of the Supporting Files provided as part of this Full Disclosure Report.

| <b>File Name</b>                    | <b>Description</b>                       | <b>Location</b> |
|-------------------------------------|--|-----------------|
| <b>/SPC1_RESULTS</b>                | <b>Data reduction worksheets</b>         | <b>root</b>     |

## **APPENDIX B: THIRD PARTY QUOTATION**

All components are directly available through the Test Sponsor.

## **APPENDIX C: TUNING PARAMETERS AND OPTIONS**

The following scripts, listed below, were used to set tuning parameters and options:

- ***aio-max-nr.sh*** to set the maximum asynchronous I/O
- ***nr\_request.sh*** to change the I/O scheduler
- ***scheduler.sh*** to increase the disk queue depth

The scripts described above are included in the Supporting Files (see Appendix A) and listed below.

### ***aio-max-nr.sh***

```
echo 1048576 > /proc/sys/fs/aio-max-nr
cat /proc/sys/fs/aio-max-nr
```

### ***nr\_request.sh***

```
#!/bin/bash

#default:
for i in sdc sdd sdb sde sdg sdf sdh sdj sdi sdk sdm sdn sdl sdp sdo sdq sdr sds
    sdt sdu sdu sdv sdw sdx sdy sdz
do
    echo 1024 > /sys/block/$i/queue/nr_requests
done

#show
cat -n /sys/block/sd[b-z]/queue/nr_requests
```

### ***scheduler.sh***

```
#!/bin/bash

#default: noop anticipatory deadline [cfq]
for i in sdc sdd sdb sde sdg sdf sdh sdj sdi sdk sdm sdn sdl sdp sdo sdq sdr sds
    sdt sdu sdu sdv sdw sdx sdy sdz
do
    echo noop > /sys/block/$i/queue/scheduler
done

#show
cat -n /sys/block/sd[b-z]/queue/scheduler
```

## **APPENDIX D: STORAGE CONFIGURATION CREATION**

### **Step 1 - Create Storage Pool, RAIDs, LUNs, Clients, Mapping**

The ***init\_ms2500g2.sh*** script, listed below, is executed on either of the Storage Controllers via a CLI session to perform the following actions:

1. Create a storage pool for each Engine: Pool-A-1 and Pool-B-1
2. Create 8 RAID10
3. Create 16 LUNs (2 LUNs per RAID10, 667GB per LUN)
4. Create 2 Clients in each Engine
5. Add Host System FC Initiators for the Clients (4 Initiator per Client)
6. Create Storage Targets for the Clients (4 Targets per Client and each Target is associated with 1 FC port)
7. Add LUNs to the Targets (2 LUN per Target)

The script file described above is included in the Supporting Files (see Appendix A) and listed below.

#### ***init\_ms2500g2.sh***

```
#!/bin/bash

#Create 2*Pool:Pool-A-1/Pool-B-1
echo "Waiting for create 2*Pool"
ms-cli EngineA "pool mgt create -n Pool-A-1 -t t"
ms-cli EngineB "pool mgt create -n Pool-B-1 -t t"

#Create RAID: 8 * RAID10
echo "Waiting for create EngineA RAID"
ms-cli EngineA "raid mgt create -n RAID-0001 -p Pool-A-1 -l RAID10 -d
 1:1:1:1,1:1:1:2,1:1:1:3,1:1:1:4,1:1:1:5,1:1:1:6"
ms-cli EngineA "raid mgt create -n RAID-0002 -p Pool-A-1 -l RAID10 -d

## **Step 2 - Create Volumes on the Master Host System**

The script ***mk1vm\_ms2500g2.sh*** is executed on the Master Host System to create 38 logical volumes as follows:

1. Create Physical Volume:

Create 16 physical volumes using the pvcreate command.

2. Create Volumes Groups:

Create 1 volume group (vg11) using the vgcreate command over the 16 physical volumes: /dev/sdb, /dev/sdc, /dev/sdd, /dev/sde, /dev/sdf, /dev/sdg, /dev/sdh, /dev/sdi, /dev/sdj, /dev/sdk, /dev/sdl, /dev/sdm, /dev/sdn, /dev/sdo, /dev/sdp, /dev/sdq.

3. Create Logical Volumes:

Create 18 logical volumes with a volume capacity of 266GB, on vg11 for ASU-1.

Create 18 logical volumes with a volume capacity of 266GB, on vg11 for ASU-2.

Create 2 logical volumes with a volume capacity of 532GB, on vg11 for ASU-3.

4. Scan Physical Volumes, Volume Group, and Logical Volumes; and activate each Logical Volume:

Execute the ***lv\_scan.sh*** on the Slave Host Systems to scan the physical volumes, volume group and logical volumes; and make each logical volume available (activate).

The script files described above are included in the Supporting Files (see Appendix A) and listed below.

## APPENDIX E: CONFIGURATION INVENTORY

An inventory of the Tested Storage Configuration was collected during the execution of the scripts ***ms2500g2\_test\_phase1.sh*** and ***ms2500g2\_test\_phase2.sh***. The following log files were generated:

- ***volume\_listing\_start.txt*** List of configured storage before the INIT Phase.
- ***profile\_start\_ms2500g2.txt*** List of configured volumes before the INIT Phase.
- ***volume\_listing\_end.txt*** List of configured storage after TSC restart.
- ***profile\_end\_ms2500g2.txt*** List of configured volumes after TSC restart.

The above log files are included in the Supporting Files (see Appendix A).

## **APPENDIX F: WORKLOAD GENERATOR**

The host parameters for the SPC-1 workload generator were defined using the script ***2host.HST***.

The ASUs accessed by the SPC-1 workload generator are defined using the script ***slave\_asu.asu***.

The initial test phases of the benchmark are executed using the scripts ***ms2500g2\_test\_phase1.sh*** and ***ms2500g2\_test\_persist1.sh*** until the Persistence Test shutdown. Once the TSC has been restarted, the PERSIST\_2 test phase is executed using the script ***ms2500g2\_test\_phase2.sh***.

The above scripts are included in the Supporting Files (see Appendix A) and listed below.
